LETTER OF TRANSMITTAL

Securities and Exchange Commission,

Hon. Nelson A. Rockefeller,
President of the Senate,
Washington, D.C.

Dear Mr. President:

Hon. Carl Albert,
Speaker of the House of Representatives,
Washington, D.C.

Dear Mr. Speaker: I have the honor to transmit herewith the Final Report of the Securities and Exchange Commission pursuant to Section 12(m) of the Securities Exchange Act of 1934 (the "Act") which authorizes and directs the Commission to make a study and investigation of the practice of recording the ownership of securities in other than the name of the beneficial owner—commonly referred to as "street" and "nominee" name registration—to determine whether the practice is consistent with the purposes of the Act, with particular reference to Sections 12(g), 13, 14, 15(d), 16 and 17A and whether steps can be taken to facilitate communications between issuers and the beneficial owners of their securities while retaining the benefits of the practice.

In carrying out the Study, the Commission made an extensive survey of issuer-shareowner communications during the 1976 proxy season and developed comprehensive data concerning the operation of the current system of issuer-shareowner communications and its relationship to, and impact on, securities processing. On the basis of these data, the Commission has concluded that the continued use of street and nominee name arrangements is fundamental to the operation of existing securities processing systems and that, in general, issuer-shareowner communications are being effectively carried out within the current framework. The Commission has identified certain problems in the system, however, which can be mitigated through improved performance by issuers and brokers and has made recommendations to accomplish this. In addition, the Commission has identified and made recommendations concerning ways in which the existing system could more fully satisfy Congressional expectations with respect to public disclosure of information regarding beneficial owners whose holdings may enable them to influence corporate management or affect the market in an issuer's stock.

In light of the data obtained during the course of the Study, the Commission believes that, in conjunction with its ongoing regulatory programs, implementation of the recommendations made in the Final Report will facilitate the establishment of a national clearing and settlement system at an early date and make significant contributions to achievement of other of the Act's objectives.

Very truly yours,

Roderick M. Hills, Chairman.
ACKNOWLEDGMENTS

Subject to the overall responsibility of Lee A. Pickard, Director of the Division of Market Regulation, the work of this Study was headed by Robert J. Millstone, Senior Special Counsel. The staff for the Study was comprised of attorneys Dennis E. Carlton, D. Kevin Dolan, Phillip M. Huston, Jr., and C. Eston Singletary. Anthony C. J. Nuland, Associate Director of the Division of Market Regulation, provided substantial guidance and editorial assistance. Assistant Director Le Manh Tri, James P. Burgess, and Jeffry L. Davis of the Directorate of Economic and Policy Research performed much of the analysis of the data collected during the Study.

Mention should be made of the following members of the Commission’s Office of Data Processing who processed the statistical data generated by the Study: Branch Chief Richard T. Redfearn, Albert Madeoy, Kenneth R. Brown, Richard L. Hooper, and Marvin C. Perry. Mention should be made also of the members of the staff of the Office of Securities Processing Regulation of the Division of Market Regulation who read the drafts of the Final Report and of Terry M. Chuppe, Senior Economics Officer for the Division, and financial analyst Daniel L. Bateman who advised on statistical matters.

Special recognition must be given to the Division's Administrative Officer, Sandra V. Reilly, for her patient and constant support and to the clerical and secretarial staff, particularly Regina M. Budd, Carla King, Valerie L. Krohn, Janice M. Merkle, E. Carol Niedzialek, Tiscia Pal, Kimberly A. Seibel and Kitty L. Welsh, without whose skill and dedication the Study could not have been completed.

CHAPTER I
INTRODUCTION

A. Background

The practice of registering securities in the records of issuers in
other than the name of the beneficial owner is commonly referred to
as “nominee” and “street” name registration. Nominee name regis-
tration refers to arrangements used by institutional investors (insur-
cance companies and investment companies among others) and finan-
cial intermediaries (brokers, banks and trust companies) for the regis-
tration of securities held by them for their own account or for the account
of their customers who are the beneficial owners of the securities. Street
name registration, a specialized type of nominee name registra-
tion, refers to the practice of a broker registering in its name, or
in the name of its nominee, securities left with it by customers or
held by it for its own account.

American institutions first began extensively to register securities
in nominee name in the 1930’s in an effort to escape onerous transfer
requirements placed on corporations and fiduciaries by issuers seeking
to protect themselves from judicially imposed liability for improper
transfers. Customarily, issuers required the submission of all sup-
porting documents before transferring stock held by fiduciaries and
required corporate investors to demonstrate the authority and
incumbency of the individual officer or employee acting on their
behalf. The use of the nominee as the registered holder of stock
eliminated from the issuer’s records any evidence of a fiduciary
relationship and made the recordholder a non-corporate entity.
Thus nominees could transfer securities without meeting the require-
ments placed on corporate or fiduciary shareholders.

1 A nominee is, typically, a partnership formed exclusively to act as the recordholder of securities. Each
of the nominee’s general partners is an employee of the professional fiduciary or corporate institutional
investor and legally is empowered to make transfers of nominee stock. As employees depart or assume other
duties, they retire from the partnership, and new partners are admitted so that the partnership continues
as a creature of the parent entity. Often, the partnership name is short, is derived from the name of a
partner or former partner, and includes at the end “& Co.”, the traditional indication of a partnership.

2 An issuer transferring record ownership of its securities was obligated to protect equitable, or beneficial,
interests, as well as legal, or record, interests. If the character of a transfer made in breach of trust were
discernible on reasonable inquiry, failure to make that inquiry rendered the issuer liable to the beneficial
owner. This doctrine was established in Lowry v. Commercial and Farmers’ Bank, 15 F. Cas. 1040 (No.
8841) (C.C. Md. 1848), which held that corporations were responsible for the propriety of transfers of their
stock by fiduciaries. A corporation was “* * * the custodian of the shares of stock, and clothed with power
sufficient to protect the rights of everyone interested, from unauthorized transfers; it is a trust placed in
the hands of the corporation for the protection of individual interests, and like every other trustee it is
bound to execute the trust with proper diligence and care, and is responsible for any injury sustained by
its negligence or misconduct.” Id. at 1047.

of Unauthorized Fiduciary Transfers of Stock,” 48 Yale L. J. 92 (1938).

6 For an extended discussion of the historical development of the practice of using street and nominee
names, see Preliminary Report of the Securities and Exchange Commission on the Practice of Recording the
Ownership of Securities in the Records of the Issuer in Other than the Name of the Beneficial Owner of Such Securi-
ties (December 4, 1975) (“Preliminary Report”).
Nominee registration still serves to facilitate transfers, but today it provides other important benefits to the securities industry as well. The widespread use of nominee registration, however, has collateral effects which may be disadvantageous. First, it makes communications between issuers and their shareholders more circuitous due to the interpositioning of intermediaries. Second, it tends to complicate regulation by masking beneficial owners of securities. Third, since the jurisdiction of certain sections of the Securities Exchange Act of 1934 (the "Act") is based upon a shareholder-of-record standard, the concentration of securities ownership in nominees may have the effect of inappropriately removing or excluding issuers from the jurisdiction of the Act.

Because of concern regarding these consequences, Congress, in June 1975, enacted Section 12(m) of the Act. Section 12(m) authorized and directed the Commission to undertake a study and investigation of the practice of recording the ownership of securities in the records of the issuer in other than the name of the beneficial owner of such securities and to determine (1) whether the practice is consistent with the purposes of the Act, with particular reference to Sections 12(g), 13, 14, 15(d), 16 and 17A thereof, and (2) whether steps can be taken to facilitate communications between issuers and the beneficial owners of their securities while at the same time retaining the benefits of such practice. Section 12(m) directed the Commission to report its preliminary findings to Congress within six months after enactment of the section and its final conclusions and recommendations within one year.

In December 1975, the Commission filed its Preliminary Report with Congress. The Preliminary Report set forth a history of the practice of registering securities in street and nominee name and discussed generally the impact of the practice on the purposes of the Act. Thereafter, it presented seven possible approaches to shareholder communications and standards for evaluating them.

In order to make this evaluation, the Commission determined to develop an empirical model of the issuer-shareholder communications system based upon a survey of shareholders, brokers, banks and issuers. Issuer-shareholder communications, however, tend to be seasonal. Since most issuers have their annual meetings in the spring and early summer, the transmittal of the bulk of proxies and annual reports takes place during March, April, May and June (referred to as "proxy season"). The survey, therefore, was designed to reflect the activities of issuers and intermediaries and the concerns of shareholders during proxy season, when the system is under the greatest stress.8

According, in April 1976, the Commission sought from Congress a six-month extension to December 4, 1976, of the deadline for filing the final report of the Study. On June 7, 1976, the House of Representatives passed H.R. 13246, a bill granting the extension. S. 3471, comparable legislation in the Senate, was not acted upon. Because the data to be derived from the survey were essential to permit the Commission to make the thorough and decisive determinations:

---

8 As used herein, "intermediaries" means brokers and banks which hold securities in their name or the name of their nominee for the benefit of others.

9 The Commission considered a survey which would have focused upon one or more past proxy seasons, but numerous interviews led the Commission to conclude that much of the necessary information would not be available on an historical basis or would be available only in permanent files and would require significant manual effort to retrieve.
required by Section 12(m), the Commission decided to complete the survey and to submit its report to Congress at the earliest possible date.

B. Data Sources for the Study

The Study has drawn the information presented herein from a number of sources. Almost 100,000 questionnaires were distributed to shareowners and over 23,000 were returned. Detailed questionnaires were completed by 159 issuers, 118 brokers, and 149 banks. Interviews were conducted throughout the country with representatives of issuers, brokers, banks, and other organizations.

In addition, the American Society of Corporate Secretaries surveyed 422 of its members concerning the approaches to shareowner communications set forth in the Preliminary Report and supplied the results to the Commission. Useful information was provided also by the American Bankers Association and several regional bankers' associations, the American Telephone and Telegraph Company, the Committee of Publicly Owned Companies, the Corporate Transfer Agents Association, Inc., Merrill Lynch, Pierce, Fenner & Smith Inc., the Securities Industry Association, the Western Stock Transfer Association, Inc., and many other commentors.

C. Organization of the Final Report

The Final Report is divided into five chapters. Following this introductory chapter, each chapter consists of a discussion, conclusions, and recommendations. Chapter Two discusses the benefits of the practice; Chapter Three considers the impact of the practice on shareowner communications; Chapter Four considers the effect of the practice on the disclosure and dissemination of information about the identity and holdings of beneficial owners of securities; and Chapter Five reviews the effect of the practice on the jurisdictional provisions of the Act.

D. Summary of Conclusions and Recommendations

1. Benefits of the Practice of Registering Securities in Nominee and Street Name

The Commission has concluded that the practice of registering securities in the records of the issuer in other than the name of the beneficial owner of such securities is consistent with the purposes of the Act, with particular reference to Sections 12(g), 13, 14, 15(d), 16 and 17A. The practice benefits investors and the securities industry by facilitating the transfer of record ownership and the clearance and settlement of securities transactions. In addition, it is integral to the operation of securities depositaries. At the same time, the widespread use of nominee and street name registration causes certain problems. The Commission has found, however, that established procedures have overcome many of these problems, and the Commission believes that the problems which remain can be mitigated within the framework of the current system.

1 Hereinafter referred to as the "responding issuers," the "responding brokers," and the "responding banks," respectively. Selected data from the questionnaires are summarized in Appendix B. As to the sampling technique used in these surveys, see Appendix D.
The Commission, therefore, recommends that no steps be taken which would discourage the use of nominee and street name registration or diminish the benefits which the practice provides.

2. The Practice as It Affects Issuer-Shareowner Communications

Empirical data demonstrate that the existing issuer-shareowner communications system is, on the whole, effective in transmitting materials to shareowners in a timely manner and in providing an effective mechanism for the solicitation of proxies. Moreover, most issuers perceive the system as meeting their needs, and all but a small percentage of shareowners, whether they hold stock directly or through a broker or bank, are satisfied with the service they receive. Brokers and banks strongly favor retention of the current system.

While problems exist, they are not evidence of systemic weaknesses but result from failures by individual brokers and issuers. In general, legislative or regulatory action does not appear to be necessary to correct these problems. Rather, improved compliance with self-regulatory rules and industry-wide implementation of generally accepted standard procedures for the distribution of annual reports and the solicitation of proxies would resolve most of them.

In regard to the voting of securities, Congress has been concerned that large institutions, particularly banks, may exercise undue influence in the affairs of publicly-held companies by voting securities held by such institutions for the benefit of others. Banks normally vote securities held pursuant to custody and trust arrangements which empower the banks to exercise voting discretion. Several years ago it was also common for banks to vote securities over which they did not have a specific written grant of voting authority from the beneficial owner. In response to Congressional and other criticism, all but a small percentage of the nation's banks appear to have ceased that practice.

In the brokerage community, most members of national securities exchanges, acting pursuant to the rules of those exchanges, vote securities without written authorization on certain non-controversial matters. The Commission considered whether this voting resulted in brokers exercising undue influence on corporate affairs or impinging on customers' voting rights. After reviewing the matter, the Commission has concluded that because of requirements and limitations in those rules, such voting is not improper. At the same time the Commission has found certain problems with those rules which could lead to inappropriate voting in some situations.

The Commission has concluded that none of the alternative approaches to shareowner communications presented in the Preliminary Report, at this time, could effect improvements in issuer-shareowner communications at an acceptable cost while preserving the advances made in recent years in the processing of securities transactions. The transfer agent depository concept ("TAD")\(^{10}\), however, appears to exhibit promise as a long-term means for streamlining shareowner communications. In rejecting the other alternatives, the Commission considered carefully the strong desire of many issuers for direct communications with their shareowners. Each method considered for

\(^{10}\) The TAD concept is discussed infra p. 41.
effecting direct communications would have seriously disrupted the securities markets or would have imposed financial and recordkeeping burdens on brokers, banks, or issuers. Imposition of these burdens cannot be justified absent a finding, which the Commission was unable to make, that the existing communications system is seriously deficient.

In view of the foregoing, the Commission recommends that the established issuer-shareowner communications system be retained. Certain steps should be taken to improve the operation of the system, however. Specifically, the Commission will review the recommendation of the Study that there be a rule requiring issuers to announce record dates for annual meetings in a more timely and effective manner. The Commission has under consideration adoption of pending rules which would require issuers to send search cards to intermediaries at least ten days prior to the record date and would require brokers to respond promptly to issuers’ inquiries. The Commission also will evaluate the recommendation of the Study that brokers be required to forward all communications which an issuer supplies and for the forwarding of which the issuer reimburses the broker’s reasonable expenses.

The Commission will ask several of the national securities exchanges to review with their members the procedures under their rules for voting stock held in street name and to amend those rules where necessary in order to correct certain misinterpretations of the procedures. In addition, the Commission will ask the self-regulatory organizations jointly to prepare a brochure for distribution to members’ customers to help them better understand the benefits and effects of leaving securities with a broker in street name.

Finally, the Commission will propose an advisory committee drawing representatives from the issuer, bank, and brokerage communities to focus on developing self-regulatory approaches to implementing greater standardization in the system for transmitting shareowner communications. If the self-regulatory approach proves unsuccessful, the Commission will consider exercising its rulemaking power to effect standardization.

3. The Practice as It Affects Disclosure of Beneficial Ownership

The practice of registering securities in nominee and street name limits the amount of information readily available to the public regarding beneficial owners of substantial amounts of an issuer’s securities. Congress has determined that such information is relevant to the investment and voting decisions of the public and is necessary to the fulfillment of regulatory responsibilities by federal agencies. Accordingly, Congress has established a policy of requiring substantial beneficial owners whose holdings place them in a position potentially to control or influence significantly the management of an issuer to report certain information about those holdings. Congressional policy also requires that such information be made available to the public.

The legislative history of the disclosure provisions of the Act indicates that Congress considered ownership by any person or group of more than five percent of any class of an issuer’s equity securities to be sufficient to create the possibility of influence or control. In the case of large institutions which have investment discretion over securities they hold, Congress established special reporting requirements.
The Commission believes that the Act and the rules thereunder may not fully achieve the scope of disclosure contemplated by Congress. In particular, certain persons whose ownership interest exceeds five percent are not required to report their ownership. Implementation of Section 13(f) of the Act, requiring reporting by large institutions, has not been completed. Furthermore, information about persons who are required to report is not as widely disseminated as may be desirable. Finally, the Commission’s powers need to be clarified in order to assure effective enforcement of the disclosure provisions, particularly against foreign persons.

Accordingly, the Commission concludes that a comprehensive system for disclosure of ownership interests should be established which would:

a. require disclosure by all persons owning more than five percent of an issue;

b. require issuers to include in their registration statements, proxy and information statements, and annual reports the information collected under (a);

c. require information from large institutions pursuant to Section 13(f) of the Act and provide an effective means for dissemination of that information; and

d. assure that the Commission has enforcement powers sufficient to detect any evasion of the reporting requirements.

In order to accomplish this, the Commission seeks legislation to require ownership reports from those persons owning more than five percent of an issuer’s securities who are not currently required to report under the Act. The Commission has adopted “Item X,” proposed in August 1975, which will require issuers to publish information about persons owning more than five percent of their securities in registration statements, proxy and information statements, and annual reports. In addition, the Commission will complete implementation of Section 13(f) to require reporting by large institutions and will take steps to make such information publicly available. Finally, the Commission seeks legislation to clarify its enforcement powers particularly with regard to persons who hold securities through the nominees of foreign institutions.

4. The Practice as It Affects the Jurisdictional Standards of Sections 12(g) and 15(d)

The Commission concludes that the practice of registering securities in nominee and street name has not had an adverse effect on the jurisdictional requirements of Sections 12(g) and 15(d) of the Act. Those requirements are based, in part, on shareholder-of-record standards which Congress employed on the assumption that there is a substantial correlation between the number of recordholders and the number of underlying beneficial owners. No significant evidence exists to indicate that this assumption has become invalid. Since enactment of the jurisdictional standards of Sections 12(g) and 15(d) in 1964, there has been only modest growth in the total percentage of securities held in nominee name. It is therefore unlikely that any issuers have been removed or excluded from the operation of those sections of the Act because of an increase in nominee registration.
The Commission, in carrying out its responsibilities to foster a national clearance and settlement system, has encouraged and will continue to encourage the expanded use of depositories. Depositories, however, tend to reduce the number of shareholders of record by concentrating in a single nominee name the holdings of many nominees. Accordingly, to assure that the provisions of Sections 12(g) and 15(d) are not affected, the Commission believes steps should be taken to remove depositories from the chain of ownership for purposes of those sections.

The Commission, therefore, will consider the recommendation of the Study that it use its power under Section 12(g)(5) to define the "shareholder of record" of securities held by a depository to be the person on whose behalf the securities are so held. The Commission seeks legislation to enable it similarly to define "shareholder of record" for purposes of Section 15(d). In connection with this, the Commission will also consider the recommendation of the Study that each securities depository be required to send periodically to each issuer whose securities the depository holds a list of the persons on whose behalf the depository holds the securities.
Chapter II

BENEFITS OF THE PRACTICE OF REGISTERING SECURITIES IN NOMINEE AND STREET NAME

A. Discussion

Registration of securities in nominee name initially served as a method of facilitating transfers by fiduciaries and corporate institutional investors, a function which it still performs. As the practice became more common, it provided other important benefits to the nation’s securities markets.

The practice allows brokers and banks to combine the interests of many customers into a single “jumbo” certificate. This greatly reduces the number of certificates which must be maintained, eliminating the need for expensive safekeeping space. The use of jumbo certificates also decreases and simplifies the paperwork associated with servicing customer accounts. Moreover, registration of securities in nominee or street name permits brokers, banks and institutions to move securities among in-house accounts without transfer of record ownership.

In addition to facilitating the internal operations of intermediaries, street and nominee name registration is central to arrangements which expedite the clearance and settlement of securities transactions among intermediaries. For example, street name registration eliminates many of the routine, time-consuming transfers which were a major factor in the paperwork crisis that crippled the industry in the late 1960’s. Under industry practice, a buying broker will accept from a selling broker delivery of securities registered in street name (though not necessarily in the selling broker’s street name), and the buying broker in turn may redeliver such securities to another broker, in each case without the need to transfer record ownership prior to delivery.

Today an increasing number of securities transactions are being settled through the use of securities depositories which, by registering and holding their participants’ securities in nominee name, are able to effect deliveries among participating intermediaries by computerized book-entry without movement of certificates or transfer of record ownership. The ability to complete transactions in this manner is the

1 “Clearance and settlement” of securities transactions encompasses the processes by which the parties to a transaction exchange money and securities. Clearance and settlement traditionally have been performed by subsidiaries of the national securities exchanges and of the National Association of Securities Dealers, Inc. (“NASD”).

3 Currently, for example, over 96 percent of the transactions in common stock on the New York Stock Exchange, Inc. (“NYSE”) and the American Stock Exchange, Inc. (“Amex”) are settled by book entry delivery through The Depository Trust Company (“DTCC”).

(9)
foundation of a national system for the clearance and settlement of securities transactions and is dependent upon the registration of securities in the nominee name of the depository.  

B. Conclusions

In Section 17A of the Act Congress directed the Commission to facilitate the establishment of a national system for the prompt and accurate clearance and settlement of securities transactions. The Commission believes that the practice of registering securities in other than the name of the beneficial owner is essential at this time to the establishment and refinement of such a system and is consistent with the purposes of the Act, with particular reference to Section 17A.

C. Recommendation

In view of the foregoing, steps taken to improve shareowner communications, to effect disclosure of beneficial ownership, or otherwise to provide information about the ownership and control of publicly-held companies should not discourage the use of nominee and street name registration or diminish the benefits such registration provides.

---

4 The results of the increased use of depositaries in conjunction with highly automated clearing corporations have been dramatic. In contrast to the period of the paperwork crisis in the late 1960's, when daily trading volumes on the NYSE of 11 to 12 million shares overwhelmed securities processing systems, the securities industry was able to handle average NYSE daily volumes of 16 million shares in 1972, 19 million shares in 1975, and 31 million shares in January 1976.
Chapter III

THE PRACTICE AS IT AFFECTS ISSUER-SHAREOWNER COMMUNICATIONS

A. Discussion

1. Profile of the Current System of Transmitting Shareowner Communications

The transmission of communications to shareowners who hold securities of record is a straightforward procedure. Typically, the issuer or its transfer agent prepares a list of recordholders and from this list generates mailing labels; the communication then is packaged, labeled, and distributed. The rules, procedures and practices governing issuer-shareowner communications have been developed not primarily to facilitate communication with shareholders of record, but rather to assure timely transmission of communications from issuers to unknown beneficial owners whose securities are held of record by intermediaries. It is the system for transmitting shareowner communications through intermediaries with which this section is concerned.

A. THE ROLE OF BANKS

Although it is common practice to refer to the distribution of shareowner communications through intermediaries "such as brokers and banks," the Commission has found that banks do not participate as intermediaries in the distribution of materials to the extent generally assumed. The Study surveyed 179 banks of which 149, or 83 percent, responded. Among the respondents, only 13, or approximately nine percent, indicated that they distribute proxy materials and other shareowner communications as a matter of course.¹

Participation by banks in the communications process is limited because, outside of the major financial centers, banks hold in nominee name few securities over which they do not have voting authority and do not forward shareowner communications with regard to securities over which they have voting authority. Moreover, many of the banks stated that customers who retain voting authority often request that shareowner communications not be forwarded and indicated that they comply with such requests.

¹ These banks are hereinafter referred to as the "distributing banks." The distributing banks generally are located in the major financial centers. Of the responding banks which indicated that they forward shareowner communications as a matter of course, only those having at least 250 custodial accounts have been treated, for purposes of analysis, as distributing banks.

(11)
B. THE ROLE OF BROKERS

Between 900 and 1200 brokers are involved to some degree in transmitting issuer-shareowner communications. These brokers handle the vast percentage of the shareowner communications transmitted through intermediaries, but the range of their involvement and sophistication varies greatly. At one end of the spectrum is a highly automated broker which can print proxies, proxy statements and even annual reports in-house if an issuer fails to provide an adequate supply. At the other end, the Study interviewed several small brokers who package and address materials manually.

C. TRANSMISSION OF PROXY MATERIALS AND SOLICITATION OF PROXIES

(i) Transmission of proxy materials

Prior to the annual meeting of shareholders, the board of directors of an issuer establishes a record date for purposes of determining the shareholders entitled to notice of, or to vote at, the meeting. Under the law of most states, the record date must be not more than 50 nor less than ten days prior to the meeting of shareholders. Shortly before the record date, the issuer sends known intermediaries a “search letter” or “search card” inquiring as to the number of sets of proxy materials needed for transmission to shareowners.

The typical search card consists of two parts. Half is a postcard addressed to the intermediary which provides information about the issuer’s record date and meeting date and advises the intermediary of the materials to be supplied. The other half is a tear-off form addressed to the issuer which provides space for the intermediary to indicate the number of sets of materials which will be needed. The search card advises the broker of the number of pieces and the dimensions of the material to be mailed, provides the broker with the name and address of the proper person in the issuer’s organization from

2 This estimate is based on the assumption that brokers engaged in the issuer-shareowner communication process carry customer accounts and clear other than on a fully disclosed basis. In general, a broker may use three types of clearing arrangements: (1) he may do his own clearing; (2) he may clear on a fully disclosed basis; or (3) he may clear on an omnibus basis. In a fully disclosed arrangement, customer accounts are in the name of the broker who services the accounts thereafter. In an omnibus arrangement, the clearing broker holds the introducing broker’s securities for the account of the introducing broker and is not aware of which securities belong to a particular customer.

3 The 118 responding brokers forwarded approximately 20 million sets of proxy materials in 1975, while the 140 responding banks forwarded about 600,000. Of the sets forwarded by the responding brokers, over 15 million were forwarded by five brokers; of the 600,000 sets forwarded by the responding banks, almost 269,000 were forwarded by three banks.

4 Exhibit 1, p. 14, depicts the process described in this section.

6 Proxy materials generally consist of an annual report, a proxy statement and a proxy card. Section 14 of the Act and the rules thereunder regulate the content of proxy statements, proxy cards, and annual reports and their transmission by issuers to shareowners. If proxies are not solicited, Section 14(e) of the Act requires the issuer to transmit to shareowners an information statement containing substantially the same information as would be contained in a proxy statement.

7 The procedure of sending search cards to known intermediaries is regulated by Rules 14a-3(d) and 14e-7 under the Act. 17 CFR 240.14a-3(d) and 240.14e-7. Under the rules, an issuer must send an inquiry to any broker, bank or voting trustee which is known to hold of record shares of any class of an issuer’s securities entitled to vote at a meeting of shareholders. Notes to Rules 14a-3(d) and 14e-7 require the issuer to make an appropriate inquiry of a depository as to the participants in such depository who may hold the issuer’s securities on behalf of a beneficial owner. Thereafter, the issuer must send an inquiry to such participants. Further, if the broker fails to receive the search card to brokers which it believes may have become intermediary holders of its stock since the last solicitation but do not appear as recordholders, this blind mailing of search cards is employed because, for example, brokers purchasing stock often leave it in the street name of another broker until the record date for a dividend. In an effort to reach all intermediaries, many issuers send far more search cards than are expected to be returned.
whom materials should be ordered, and permits the broker to advise the issuer of the address to which materials are to be sent. Moreover, the distinctive blue color of the search card facilitates its processing in busy mail rooms during proxy season.8

Upon receipt of the return portion of the form, the issuer forwards materials, usually in bulk, to the intermediary. In addition to proxy materials, issuers may supply mailing envelopes, return envelopes and other stationery needs. The intermediary breaks down the materials into individual sets and may supplement the materials with various inserts relating to the customer's account with the intermediary.9 The intermediary packages the materials, addresses the envelopes to the shareowners and distributes them. The shareowner is instructed to return the enclosed proxy card either directly to the issuer or to the intermediary depending on the intermediary's procedures for voting securities.

(ii) Solicitation of proxies

(a) General.—A shareowner cannot give a proxy with respect to securities held of record by an intermediary since the shareowner does not appear on the issuer's records as a shareholder entitled to vote. There are, basically, three procedures used to vote securities of non-record shareowners through an intermediary: (1) the intermediary advises the shareowner of the matters to be voted on and requests voting instructions which the intermediary carries out; (2) the intermediary signs a blank proxy card and forwards it to the shareowner who then votes and forwards the card to the issuer; or (3) the intermediary is given voting discretion by the shareowner and votes thereafter without consulting the shareowner.

(b) Voting by banks.—Banks have voting discretion with regard to most securities they hold in nominee name and generally exercise it.10 When they do not have voting discretion, fifteen percent of the responding banks send unsigned proxy cards to their customers and request voting instructions; 50 percent of the responding banks send signed but unvoted proxy cards to their customers and instruct them to return the proxy directly to the issuer; and the other responding banks use a combination of these procedures.

(c) Voting by brokers.—The rules of most national securities exchanges provide that under certain circumstances a broker may vote securities which it holds for a customer if the customer fails to give voting instructions.11 If the broker forwards proxy materials to the customer at least 15 days prior to the meeting, the broker may give a proxy during the ten days prior to the meeting on certain non-controversial matters if no voting instructions are received.12 The

---

8 This description is based on the procedures outlined in the Manual for Proxy Solicitation of Stock in Brokers' Names (1976), a manual of standardized procedures published as a joint report of the American Society of Corporate Secretaries, Inc., the Amex, the NASD, the NYSE, and the Securities Industry Association. It is reproduced in Appendix II.

9 For example, many brokers include a letter which discusses the broker's procedure for giving a proxy when the customer fails to indicate his voting preference.

10 Only six banks indicated that they do not vote securities when they have discretion to do so. When they lack voting discretion, the banks either forward materials, register the securities directly in the customer's name, or dually register the stock, giving the shareowner's address for the receipt of proxies and other communications and the bank's for the receipt of dividends.

11 NYSE Rules 451, 452; Annex Rules 576, 577; Midwest Stock Exchange Rules, Art. XXX, Rules 2, 3; Boston Stock Exchange Rules, Ch. XXVI, §§ 2, 3. The Pacific Stock Exchange and the NASD permit a member to vote customers' securities only if the procedure is permitted pursuant to the rules of an exchange to which the member belongs. Pacific Stock Exchange Rule X, § 4; NASD Rules of Fair Practice, Art. III, § 105. The description which follows is based upon the NYSE rule.

12 Most notably the appointment of auditors and the election of directors. The rule is commonly referred to as the "ten-day rule."

Issuer Receives Proxy
rule further provides that the broker may give a proxy only if he has no knowledge of any contest as to the action to be taken at the meeting and if the action does not involve a merger or consolidation or any other matter which may "affect substantially the rights or privileges of such stock." 13 Under the NYSE and Amex rules, a customer may still give voting instructions less than ten days before the meeting, in which case the broker must submit a revised proxy to the issuer if the customer's instructions countermand the first proxy. 14

If a broker intends to give a proxy pursuant to a ten-day rule, 15 he encloses with the proxy materials sent to his customers a letter explaining generally the provisions of the ten-day rule and advising each customer that the broker will give a proxy for his shares under the ten-day rule if the customer does not provide voting instructions. As voting instructions are received, the broker tabulates the vote and, within ten days of the meeting, gives a proxy for his entire position. Shares unvoted by customers are voted for management. 16

Brokers who do not vote pursuant to a ten-day rule generally sign a blank proxy and forward it to their customers.

(d) Voting through depositories.—Originally, the Central Certificate Service ("CCS"), the first depository and the predecessor of DTC, solicited voting instructions from its participants on receipt of issuers' proxy materials. The participants, in turn, solicited instructions from their customers. This procedure was inefficient because CCS was designed to provide computer-oriented services to its participants and consequently employed a minimum of full time clerical personnel. As a result, each year during proxy season CCS had to hire and train temporary personnel to process a great volume of material. If participants were late in providing voting instructions, the depository had to send out follow-up letters.

When DTC was formed, it instituted a new system which involved forwarding signed proxy cards to participants. Although an improvement, this procedure was still inefficient.

In 1975 DTC developed what is known as the omnibus proxy procedure. Under this procedure, the depository prepares a computer generated list of the names and holdings of participants that have depository positions in an issuer's securities as of the record date. The list is forwarded to the issuer along with an "omnibus proxy" which authorizes each participant, to the extent of the participant's position, to act as the depository's proxy and to vote the securities. The procedure is used today by the three major securities depositories 17 and has largely removed depositories from the shareowner communications process.

13 NYSE Rule 452.
14 To avoid this, many brokers submit a proxy for 95 percent of their position, holding five percent in reserve to accommodate subsequent customer instructions. The rules of the Boston and Midwest Stock Exchanges are unclear on this point.
15 Of those responding brokers who are members of an exchange having a ten-day rule, 75.5 percent indicated that they vote customers' shares pursuant to a ten-day rule if the customers fail to exercise their voting rights.
16 All of the responding brokers who vote under the ten-day rule indicated that they always vote their position for management.
17 The three major depositories are DTC, the Midwest Securities Trust Company, and the Pacific Securities Depository Trust Company. The above description is based on the procedure of DTC.
D. TRANSMISSION OF QUARTERLY REPORTS AND OTHER ROUTINE COMMUNICATIONS

The transmission of quarterly reports and other routine communications is not accompanied by a solicitation of proxies and is therefore less complicated than the transmission of proxy materials and annual reports. In transmitting quarterly reports, some issuers send search cards to intermediaries and fill orders as in the case of annual reports. More often, however, issuers distribute the materials without prior notice to the investment community. In that case, the issuer either will try to anticipate each intermediary’s needs based on prior orders or will send one copy to each recordholder. In the latter situation, intermediaries will order additional materials if they intend to forward them to shareowners.

E. SPECIAL SITUATIONS

A few issuers each year become involved in a proxy contest, have an item which requires a two-thirds vote or become the subject of a tender offer. In those instances, special procedures are used to distribute communications and, other than in the tender offer situation, to solicit proxies. Many issuers employ a proxy solicitation firm to handle these special situations.

Proxy solicitation firms provide a variety of services suited to the needs of the particular issuer. Typically, the proxy solicitation firm will speed distribution of materials by hand delivering them to intermediaries across the country and will obtain proxies by writing or telephoning intermediaries and individual customers. In addition, the firm may provide consulting services with regard to strategy in fighting the tender offer or proxy contest and may play a role in overseeing the preparation, design, and printing of materials.

F. REIMBURSEMENT OF EXPENSES

After distributing an issuer’s materials to their customers, most brokers, seek reimbursement from the issuer for their expenses. The amount of reimbursement sought is normally based upon guidelines established by the major securities exchanges and the NASD. Eight of the 13 distributing banks routinely seek reimbursement for expenses, while one bills only in certain cases. The other four distributing banks, as well as most of the other responding banks, refrain from seeking reimbursement.

---

18 Unless the issuer has declared a dividend to be paid simultaneously with the distribution of the quarterly report or other communication, there is no concurrent record date.
19 Thirty-eight percent of the responding issuers indicated that they have utilized the services of a proxy solicitation firm. Most of these issuers stated that they employed a proxy solicitor only in special situations.
20 Eighty-four percent of the responding brokers indicated that they seek reimbursement for the forwarding of proxy materials.
21 The rules of several of the national securities exchanges and the NASD provide schedules suggesting appropriate reimbursement of distribution expenses. For example, see NYSE Rule 451, Amex Rule 576, and Article III, section 1.05 of the Rules of Fair Practice of the NASD.
22 Several banks advised us that they do not seek reimbursement because, in their opinion, to do so might violate state trust laws which prohibit fiduciaries from profiting from the administration of a trust.
2. Adequacy of the Current System

The adequacy of the current system for transmitting shareowner communications may be measured in two ways; whether empirical data indicate that the system provides an effective mechanism for the timely transmittal of shareowner materials at a reasonable cost; and whether the participants in the system perceive the system to be fulfilling their needs.

A. EMPIRICAL ANALYSIS OF THE DISTRIBUTION OF PROXY MATERIALS AND THE SOLICITATION OF PROXIES

(i) Time frames

Based on responses of issuers and shareowners to the Commission's survey, an empirical model of the proxy transmission process was developed. The Commission sought to identify weak links in the communications process by measuring the amount of time required to complete the various steps in the transmission of materials to shareowners.

(a) Receipt of proxy materials by shareowners.—The most critical time-span is the period between the receipt of the proxy material by the shareowner and the date of the annual meeting. If the shareowner is not given sufficient response time before the meeting date, the entire process has failed. A distribution of the number of days between the receipt of proxies by shareowners and the date of the issuer's annual meeting is shown in Exhibit 2. The exhibit segregates the responding shareowners between those who received their proxy materials directly from an issuer and those who received their proxy materials via an intermediary. The latter group of responding shareowners is further divided into those who received their proxy materials from banks and those who received them from brokers.

Shareowners who receive materials directly from issuers generally receive their proxies earlier (relative to the meeting dates) than do shareowners whose proxies are routed through intermediaries, but the time differences do not appear to be significant. Although 90.1 percent of the proxies mailed directly by issuers were received more than 20 days prior to the meeting dates, as compared with 70.9 percent of those transmitted through banks and 78.3 percent of those sent through brokers, the percentage of proxies received at least eleven days before the meeting date is roughly equivalent for all three groups: 96.8 percent of the proxies mailed directly by issuers; 93.6 percent of those routed through banks; and 95.1 percent of those routed through brokers.

While the foregoing indicates that the proxy transmission process performs adequately in the sense that the receipt of proxy materials by shareowners is timely, a further analysis of the intermediate steps in the process is still appropriate. If there were a significant failure rate, then the intermediate steps which tended unduly to slow down the transmission of materials would be critical.
(b) Intermediate steps in the communications process.—The first column of Exhibit 3 indicates that, as expected, issuers generally announce their record dates 10 to 50 days in advance of those dates. The median time-span between the announcement and the record date for the responding issuers was between 21 and 25 days. Contrary to the expected pattern, however, 24 percent of the responding issuers allowed less than 11 days between announcement and record date, and 11 percent announced their record date after the fact.

While the lag between announcement and record date is not, of itself, important, most issuers do not send search cards to intermediary recordholders until after the announcement. Thus, a short time-span between announcement and record date generally indicates insufficient time before the record date during which the issuer can transmit search cards. The issuer can continue the search procedure after the record date, but this practice extends the dates for completion of subsequent steps in the solicitation process and requires intermediaries to reconstruct their record date positions.

The second column of Exhibit 3 shows the distribution of time lags between the commencement of the issuer’s search procedure and the record date. This distribution is skewed more toward the shorter time lags than is the announcement-to-record date distribution because the search procedure normally begins after the announcement of the record date. The median time-span for this sequence falls between 11 and 15 days; 39 percent of the responding issuers indicated less than 11 days between the two dates.

The third column of Exhibit 3 shows that for nearly two-thirds of the issuers for which time lags were calculated the intermediaries’ requests for proxy materials were received by the issuer less than eleven days after the mailing of a search card, and for nearly 89 percent of the matched issuers the requests were received within 20 days of their

23 Since the distributions in columns three and four are derived by matching the responses from issuers and intermediaries, only 61 of the 156 issuers are represented. Nevertheless, the data are sufficient. Where more than one intermediary was matched with a particular issuer, the mean time lag was computed for inclusion in the exhibit. Issuers for which time lags were calculated are hereafter referred to as “matched issuers.”

24 Part of this quick response is attributable to intermediaries taking the initiative to request proxies without waiting for search cards; hence the eight issuers who received requests before the scheduled mailing of search cards.
search card mailings. These time periods appear to be adequate, although it is desirable for intermediaries to minimize the response time.

1 Based on earliest date of mailing of search cards to intermediaries.
2 Based on responses relating to designated intermediaries on the issuer survey and matched to responses relating to the corresponding issuers on the bank/broker survey.
3 In some cases the issuer indicated that, for example, the record date occurred before the announcement of the record date. Since this is the reverse of the expected chronology, the number of days between the two dates is represented as a negative number.

The next step in the procedure is for issuers to fill the intermediaries' requests for proxies. By showing the distribution of time lags between the dates the issuers receive requests and the dates the intermediaries receive the materials, the fourth column of Exhibit 3 helps to assess the issuers' performance. Half of the matched issuers filled the intermediaries' requests within 25 days of receipt of the requests, and 90 percent of the matched issuers filled the requests within 40 days. The time lags are in part attributable to the fact that most issuers hold search card requests until materials are distributed to recordholders generally. All intermediaries' requests received before that date are filled at that time and subsequent requests are filled as they are received.

The performance of issuers and intermediaries reflected in Exhibits 2 and 3 demonstrates that the overall process of proxy transmission via intermediaries is substantially successful in achieving its goal.

**(ii) Voting efficiency of the system**

The efficiency of the shareowner communications process can also be measured in terms of its success in eliciting proxies. Even if the system fully achieves its distribution objective, issuers will be frustrated if a sufficient voting percentage is not attained. The Com-
mission therefore sought to determine whether there is any relationship between the vote received by issuers and the extent to which their securities are held in street or nominee name.

Exhibit 4 displays the cross-distribution of issuers arrayed by their voting percentages (percent of shares voted at the 1976 annual meeting) and by the concentration of their outstanding shares in the hands of intermediaries. Since more than 79 percent of the issuers attained voting percentages of at least 75 percent at their 1976 annual meetings, there is little variation among issuers to attribute to the presence of intermediaries in the communications process. Furthermore, an examination of the data revealed no discernible pattern to the distribution so that the variation which does exist does not appear to be related to the concentration of intermediary shareholdings.

---

25 A regression equation testing the relationship between the percentage of shares voted and the percentage of shares held by intermediaries confirmed the lack of any statistically significant relationship.

1. None of the 159 reporting issuers are not included here due to insufficient data.

Nevertheless, the regression technique was utilized to test the "explanatory" power of several variables. First, since the intermediaries used in Exhibit 4 are not a homogeneous group, they were disaggregated into bank and broker sub-groups. This procedure did not reveal any relationship between voting efficiency and the concentration of shares in the hands of brokers, but the banks exhibited a pattern tending to support the existence of a relationship.

Exhibit 5 demonstrates that an increased concentration of an issuer's shares in banks is associated with increased voting percentages. Both the average voting percentage and the overall distribution tend to support this positive relationship. The reason that an increased concentration of bank shareholdings tends to increase an issuer's voting percentage while broker shareholdings appear to have no effect may be that banks have voting discretion with regard to most securities they hold in nominee name and exercise their voting authority to a greater extent than does the average shareowner, including other institutions.

None of the other relationships tested revealed a single factor, or combination of factors, which was able to account for a material proportion of variation in the percentage of shares voted. Only one other, the average number of shares per recordholder, was consistently significant in the statistical sense. Together, this and the percentage of shares held by banks were able to explain less than 15 percent of the observed variation in voting percentages. The above analysis leads the Commission to conclude that variation in voting percentages among issuers is traceable to factors other than the proxy distribution system.

(iii) Cost data

The Commission examined: (1) the average cost of sending proxy materials directly to recordholders in comparison with sending proxy materials through intermediaries for transmission to beneficial owners; (2) whether there exist substantial economies of scale in the transmission of proxy materials; and (3) whether the current methods of issuer reimbursement to intermediaries are reasonable.

(a) Cost structure of issuer proxy operations.—It is apparent from the cost data submitted in the various questionnaires that numerous respondents either did not have sufficient information to complete the cost questions or did not understand the instructions. Because of these problems, a sub-sample of 71 issuers which appeared to have reported reliable cost data was selected. In order to insure that the cost data were reliable, most of the issuers were contacted for explanation of the method they used to determine cost. Among these 71 issuers, 37 sent their proxies and annual reports as one package while 34 sent their proxies separately from their annual reports. These two groups were segregated for purposes of analysis of the cost data. In addition, the issuers were ranked in ascending order by the number of sets of proxy materials sent directly to shareholders and placed into five groups based on the number of sets sent.

26 The regression equation revealed a statistically significant positive relationship between the percentage of shares voted and the percentage of shares held by banks, but was able to explain only a very small proportion of the statistical variation in voting percentage among issuers.

27 The latter of these observations can be verified by noting that the "weight" within each column tends to shift slightly toward the greater voting percentages as the percentage of bank shareholdings increases.

28 These 71 issuers accounted for approximately 85 percent of all proxies sent directly to recordholders by the 150 reporting issuers.

</tbody>
</table>

Note: These data are based on a sub-sample of 71 issuers reporting reasonably accurate information concerning costs of proxy operations.

Exhibit 6 summarizes the cost information for these two groups. As can be seen from this table, the per unit direct cost of sending proxy materials directly to shareholders by issuers which send proxies and annual reports as one package ranged from $1.00 for issuers in the 10,000–99,999 category to 34 cents for issuers in the over 100,000 category. Postage accounted for approximately 84 percent of the total direct cost of sending these materials. When postage is subtracted from the per unit direct cost, the per unit internal cost ranges from 24 cents for issuers in the less than 2,000 category to five cents in the category of over 100,000 proxies.\(^{29}\) Thus the per unit cost of proxy operations falls as the number of sets of materials sent by the issuer increases. Statistically, for every one percent increase in the number of proxies sent, the per unit internal cost falls, on the average, by 0.3 percent.\(^{30}\) Because postage accounts for a high percentage of the

\(^{29}\) For all 37 issuers, the per unit internal cost was six cents; this figure, however, is heavily weighted by the issuers with over 100,000 proxies, which accounted for 95 percent of all proxies sent by the 37 sample companies.

\(^{30}\) A simple empirical model was tested on this cross-section of 37 issuers. For this purpose, only direct cost other than postage was analyzed. With the existence of economies of scale, the per unit internal direct cost will fall as the number of proxies sent increases. It is unlikely, however, that the relationship would be linear, meaning that with every increase of a thousand proxies, the per unit internal cost would decline by a fixed amount. Instead, it was hypothesized that the relationship would be curvilinear, meaning that for every percentage increase in the number of proxies sent, the per unit internal cost would decline by a certain percentage. This latter concept can be derived by using logarithmic transformations of the data. The simple model tested was:

\[
\text{Log} (\hat{C}) = a + b_1 \text{Log} (\text{Proxies})
\]

Where: Log (\(\hat{C}\))= the logarithmic transformation of the per unit direct cost minus postage per unit (also called per unit internal cost).

Log (Proxies) = the logarithmic transformation of the number of sets of proxy materials sent by each issuer.

For the 37 issuers sending proxies and annual reports as one package the following equation was derived:

\[
\hat{C} = .6207 - .3132 \text{Log} (\text{Proxies})
\]

\(R^2 = .90\)

\(F = 8.753\)
total cost of proxy operations, however, the method of mailing the proxy materials and the weight of the combined package of the proxy and annual report is a more important factor in determining per unit cost than the number of proxies sent by the issuer.

</tbody>
</table>

Note: These data are based on a sub-sample of 71 issuers reporting reasonably accurate information.

The results for issuers which send proxies separately from annual reports are similar. Surprisingly, the per unit direct cost of sending these materials separately is the same as when sent as one package, but the postage per unit decreases by one cent and per unit internal cost increases by one cent.\(^3\)

The cost data indicate that the per unit cost of sending proxy materials to beneficial owners through intermediaries is substantially higher than the per unit cost of sending these materials directly to shareholders. Exhibit 7 presents those costs for the same two groups of issuers represented in Exhibit 6. Before reimbursement to intermediaries, the per unit direct cost to issuers of sending proxies and annual reports as one package was only 21 cents compared to 37 cents when mailing directly to shareholders. The difference is primarily due to lower postage when sending materials in bulk to intermediaries. The per unit postage cost to issuers of sending proxies and annual reports as one package to intermediaries was 13 cents compared with 31 cents to send materials directly to shareholders. On the average, however, the per unit reimbursement to intermediaries was $1.52 so that the total per unit cost of sending materials through intermediaries for these issuers averaged $1.73 compared with only 37 cents when

---

\(^3\) A regression equation on the average cost to these issuers was also tested; however, the coefficient was not statistically significant. The lack of a significant relationship is probably due more to allocational problems than to the absence of scale economies.
materials were sent directly to shareholders. When proxies and annual reports are sent separately, the per unit reimbursement to intermediaries was $1.25 compared to $1.52 for materials sent as one package. The lower average reimbursement probably results from the intermediaries' ability to send the annual report by other than first class mail when the materials are not combined in the same package.

</tbody>
</table>

1 Excludes allocation of overhead for management, buildings, and depreciation of equipment.

2 The data as to the numbers of proxies sent by this category of broker-dealers are overstated somewhat because certain of the broker-dealers were unable to separate the number of proxies mailed from the number of quarterly reports and other pieces of "informational" material mailed. As a result, the per unit reimbursement is understated because the reimbursement for informational materials is usually substantially less than the reimbursement which is customary for proxy materials.

Note: These data are based on a subsample of 74 broker-dealers reporting reasonably accurate information concerning cost of proxy operations.

(b) Cost structure of intermediary proxy operations.—Of the 118 responding brokers, 74 submitted data which appeared to reflect reasonable estimates of costs. The 74 brokers are concentrated among the larger firms and accounted for 99.7 percent of all the proxy materials sent by the responding brokers. Exhibit 8, which displays summary information for those 74 brokers ranked according to the number of proxies sent to shareowners, shows that, as the number of proxies sent increases, the per unit direct cost declines, indicating potential economies of scale.

Comparing the per unit direct cost of distributing proxy materials to shareowners as between brokers and issuers, it appears more

---

22 The per unit reimbursement assumes that issuers are billed for all proxy materials sent through intermediaries. While a number of intermediaries reported that they did not request reimbursement, the number of sets of proxy materials handled by these intermediaries was small.

23 The cost information for brokers was collected on the basis of their last fiscal year rather than the current proxy season.

24 It should be noted that the per unit direct cost for all 74 firms (80.52) is somewhat low when used as an estimate for the universe of brokers. This is due to the disproportionately high volume for the 500,000 and over group. As with the issuers, a regression equation was tested to measure the average relationship of brokers' per unit direct cost (with postage subtracted) to the number of proxies sent by brokers. The following resulted:

\[
\log (\text{cost}) = 1.800 - .222 \log (\text{proxies})
\]

\[R^2 = .35, F = 29.540\]

Where Ie represents per unit direct cost for brokers.

This equation indicates that, on the average, a one percent increase in the number of proxies mailed by broker-dealers reduces the per unit direct cost (with postage subtracted) by 0.2 percent.
economical for the issuer to mail directly to its shareholders. It costs the issuer 37 cents per unit while it costs the brokers approximately 52 cents per unit. Even when mailing costs are eliminated from the analysis, it costs brokers 17 cents per unit to forward proxy materials to shareowners compared to six to seven cents per unit for the issuers. The difference in per unit mailing cost is due primarily to the increase in postage rates between the periods involved in the two surveys.

It is interesting to note that when only direct costs are considered, brokers forwarding fewer than 100,000 proxies per year can expect to lose money on their proxy operations. When all costs are considered, the brokerage firms must send 500,000 proxies per year before breaking even. Exhibit 9 portrays this for 13 of the 74 firms in Exhibit 8 which supplied allocations of detailed overhead costs associated with proxy operations. The overhead costs for these firms accounted for 13 percent of total cost. Using this relationship to adjust total costs in Exhibit 8 reduces to three cents the excess of per unit reimbursement received by the 74 firms in Exhibit 8 (63 cents) over per unit cost.

1 Includes mailing and other direct cost (mostly wages and salaries).
2 Includes allocated cost for depreciation of machinery, overhead cost of buildings, and overhead cost in terms of high level management.

As previously discussed, banks do not usually request reimbursement from issuers for forwarding proxy materials but rather include this cost in the service charge to their customers. Exhibit 10 shows summary data for the 14 responding banks which request reimbursement from issuers. Per unit direct cost for banks is higher than for brokers principally because of the small scale of their proxy operations, but economies of scale in proxy operations are evident in the bank.

---

35 The per unit direct cost and the per unit reimbursement for each of the nine proxy size classes are also provided in Exhibit 8. The per unit direct cost over per unit reimbursement per unit direct cost should not be considered representative of the industry due to the high number of brokers in the 500,000 and over category.

36 The per unit reimbursement which brokers represented in Exhibit 8 indicated they received (63 cents) was lower than the per unit reimbursement which issuers represented in Exhibit 7 indicated they paid ($1.52 for issuers which sent proxies and annual reports as one package and $1.25 for issuers which sent proxies and annual reports separately). This disparity is attributable, in part, to the disproportionate number of large brokers represented in Exhibit 8 (see supra p. 96 and Appendix D, p. 96). As noted in Exhibit 8, the per unit reimbursement cost for the largest brokers is understated; also those brokers experience economies of scale in the mailing of proxy materials to their customers. Smaller brokers, which are less represented in the sample, often charge the minimum fee for mailing materials which increases the per unit reimbursement. (For example, NYSE Rule 161 specifies a minimum charge for all sets mailed of $3.00 plus postage.)

cost data. For banks sending less than 5,000 sets of proxy materials, the per unit direct cost was $4.40 compared with $1.64 for banks sending more than 50,000 sets of proxy materials. Information as to the collection of fees from customers for handling proxy materials proved unobtainable because banks do not segregate the proxy solicitation function in their fee schedules.

### B. ANALYSIS OF THE PERCEPTIONS OF ISSUERS, BROKERS, BANKS, AND SHAREOWNERS REGARDING THE ADEQUACY OF THE CURRENT SYSTEM

The opinions and experience of the banks, brokers, issuers, and shareowners surveyed by the Commission reinforce the empirical data gathered by the Commission's survey. Seventy-four percent of the issuers, 73 percent of the brokers, and 78 percent of the banks stated that in their experience the existing communications system is satisfactory for the transmission of annual reports and proxies. The survey also indicates that institutional and individual shareowners are satisfied with the service they receive, regardless of the size of their holdings or their geographic location. Of the more than 23,000 responding shareowners, only 7.5 percent indicated some complaint about the issuer-shareowner communications system.

Other surveys also indicated a general satisfaction with the current communications system. For example, in a survey conducted by the American Society of Corporate Secretaries, a plurality (31.8 percent) of the 422 issuers responding ranked retention of the present system among the thirteen distributing banks, eleven indicated satisfaction with the current communications system, one indicated that it would prefer direct communications between issuers and shareholders, and one failed to comment.

The survey question phrased in terms of "do you have any complaints regarding the transmission of proxy materials, annual reports or other shareholder communications?" Twenty-one percent of the respondents indicated a complaint about the transmission of proxy materials, annual reports or other shareholder communications. Sixty-five percent of the respondents indicated that they had no complaints about issuer-shareowner communications. Thus, 65 percent of the respondents fell into these two categories. Five and six-tenths percent of the respondents had a complaint about the transmission of proxy materials, annual reports or other shareholder communications. These were complaints such as "issuers spend too much money on fancy annual reports" or "the president of the company is paid too much." Finally, 1.2 percent of the respondents took the opportunity to express their dissatisfaction with the federal government.

1976 Proxy Season Survey
first among the seven approaches to communications outlined in the Preliminary Report; 62 percent ranked it among the first three. 41 Although the participants in the shareowner communications process generally are satisfied with the system for transmitting proxies and annual reports, many suggested that the system is not without flaws. Nineteen percent of the issuers responding to the Commission's survey indicated some dissatisfaction with the system. 42 When asked what steps might be taken to improve the current shareowner communications system, 23 percent of the issuers indicated that no improvements were necessary, 32 percent had no opinion or gave no response, and 45 percent offered specific suggestions for improving the system. The improvement most frequently mentioned (favored by 28 percent of those offering suggestions) was direct communications between issuers and shareowners. Only slightly fewer, 27 percent, suggested that better cooperation was needed from intermediaries. A third suggestion (favored by twelve percent) was to increase the standardization of procedures.

Of the responding brokers, only 14 percent indicated dissatisfaction with the system for transmitting proxies and annual reports. 43 When asked what steps might be taken to improve the current shareowner communications system, 18 percent of the brokers indicated that no improvements were necessary, 28 percent had no opinion or gave no response, and 54 percent offered specific suggestions for improving the system. The most frequent suggestion (mentioned by 45 percent of those offering suggestions) was that more lead time was needed. These brokers complained that issuers often delay materials so long that brokers cannot forward them to their customers in time for the customers to vote. 44

None of the distributing banks had complaints about the system for transmitting proxies and annual reports, although one bank suggested that direct communications between issuers and shareowners might be preferable.

As noted, only 7.5 percent of the shareowners responding to the survey had a complaint about the distribution of proxy materials. 45 The shareowner complaints were categorized to pinpoint the most common problems: 58.5 percent of the complainants stated that proxy materials were late in arriving; 19 percent stated that they would prefer to communicate directly with the issuer; 14.8 percent stated that they were sometimes unable to vote due to late arriving proxy statements; 5.6 percent cited the receipt of duplicate proxy materials;

41 Respondents were asked to rank the approaches in order of preference from 1 ("most favored") to 7 ("most opposed").
42 As previously noted, 74 percent of the issuers indicated satisfaction with the system and seven percent had no opinion or gave no response. The problems most frequently mentioned were slow transmission of materials (cited by approximately two-thirds of the dissatisfied issuers), the expense (cited by approximately one-quarter of the dissatisfied issuers), and the inability to know if the material actually reached the shareowner (cited by approximately one-sixth of the dissatisfied issuers). Throughout the broker, bank, and issuer questionnaires, respondents were given the opportunity to state all of their reasons for advocating a particular position. Accordingly, the statistics cited herein may reflect more than one opinion by a respondent.
43 Over one-third of the dissatisfied brokers indicated that they believe the communications process places an undue burden on brokers. Approximately one-quarter indicated that some issuers fail to follow standardised procedures or fail in other ways to carry out their obligations in the communications process.
44 Other suggestions were the need for greater standardization and the need to enforce rules regulating the transmission of materials by issuers. Some brokers also stated that they would like to drop out of the communications process and allow issuers to deal directly with shareowners.
45 Exhibit 12 demonstrates that the number of shareowner complaints rose and declined in relation to the volume of proxy material being distributed but does not show the existence of a disproportionate rise during the height of proxy season which would suggest a breakdown of the system.

1976 PROXY SEASON SURVEY
and 2.1 percent said they did not want to be bothered with proxy materials,46

C. CRITIQUE OF THE CURRENT SYSTEM

(i) Problems in the transmission of proxy materials and the solicitation of proxies

(a) Transmission of proxy materials.—The primary problem in the system for the transmission of proxies and annual reports is the failure of some issuers to send search cards as required by Commission Rule 14a-3(d) 47 or to send them in a timely manner. The search card procedure initiates the communications process and helps to assure that subsequent steps are carried out efficiently. Of the responding issuers who stated they send search cards, however, twenty, or 15.7 percent, commence their search card procedure on or after record date. An additional 23 percent begin mailing search cards within ten days of record date.

Brokers and banks uniformly stated that they depend on the receipt of search cards for notification of annual meetings and record dates but many complained that they do not receive search cards from a substantial segment of the issuer community.48 Absent some collateral method for timely notification of record date, if an intermediary receives a search card after record date, it must reconstruct its record date position in the issuer’s security in order to determine the shareholders entitled to vote.

Collateral notification depends on issuers announcing record dates in a manner which effectively communicates the information to intermediaries. If brokers and banks are informed of record dates, they can order materials even if a search card is not received.49 The survey data indicate, however, that ten percent of the responding issuers announced the record date for their 1976 annual meeting on or after record date, while approximately 24 percent announced the record date between one and ten days before record date.

Many of the issuers which were interviewed or which submitted comments suggested that, in some instance, intermediaries do not respond to search cards or do not respond in a timely manner. The survey data show that such instances are infrequent. Eighty-nine percent of the responding issuers which provided information concerning intermediaries’ requests for proxy materials stated that they received

46 A disproportionate number of complaints came from brokerage firm customers. Specifically, 56.1 percent of the respondents indicated that they had received the proxy materials with which the questionnaires were included from a broker. (For a complete description of the distribution of the questionnaires, see Appendix D.) Brokerage firm customers, however, accounted for 73.6 percent of the shareholder complaints. By contrast, although issuers distributed 32.5 percent of the returned questionnaires directly to shareholders, only 9.7 percent of the complaints came from persons who had received the questionnaires directly from issuers. Banks distributed 11.4 percent of the questionnaires, and 11.6 percent of the complaints were received from bank customers. The disproportionate number of complaints from brokerage firm customers does not necessarily indicate that brokers were at fault in these instances.

47 17 CFR 240.14a-3(d).

48 Twenty-nine percent of the responding brokers and 22 percent of the responding banks stated that they received search cards from less than half of the issuers whose securities they hold, while 37 percent of the responding brokers and 29 percent of the responding banks indicated that they received search cards from between half and three-quarters of the issuers whose securities they hold. In interviews, smaller over-the-counter issuers were cited as those most frequently failing to send search cards. The survey data lend some support to that assertion. Thirteen of the 159 responding issuers, or eight percent, indicated that they do not send search cards. Of those, nine are over-the-counter issuers, or 28 percent of the responding over-the-counter issuers. Although the survey data cannot be extrapolated to indicate the extent to which over-the-counter issuers generally may be failing to send search cards, it should be noted that sixty-five percent of the nation’s publicly-held issuers are not listed on an exchange.

49 Eighty-four percent of the responding brokers indicated that they order materials even if a search card is not received. Other brokers, especially the larger firms, order proxy materials prior to the receipt of search cards.
the intermediaries' requests no more than 20 days after search cards were first mailed out.\textsuperscript{50}

Finally, problems are created by the failure of brokers, banks and issuers to use standardized procedures. Every person interviewed by the Study agreed that the use of standard forms and procedures could significantly improve the efficiency of the communications process.

(b) Solicitation of proxies.—One of the purposes of the Act is to assure to shareowners voting control over the corporations in which they invest. In 1934 Congress was particularly concerned that voting of securities by brokers might deprive shareowners of their voting control and enable brokers to assume a position of influence which rightfully belongs to the beneficial owners.\textsuperscript{51} In recent years, Congress has been concerned as well with the ability of large institutions potentially to dominate shareowner voting.\textsuperscript{52}

The Commission examined the possibility that intermediaries may exercise undue influence because of the securities they hold. Only eight percent of the responding banks, however, vote securities held for the accounts of customers without customer instructions or specific written voting authority. Banks that vote pursuant to a written grant of authority act as fiduciaries and legally represent the interests of their customers.\textsuperscript{53}

Under the ten-day rule, a broker may vote a customer's securities without instructions if the broker advises the customer of the broker's intention and the customer fails to provide voting instructions. Although the broker's vote is not made pursuant to written authorization, brokers assert that the customer's silence confers tacit authorization. Brokers do not, however, recognize a fiduciary obligation to their customers when voting under a ten-day rule and always vote their position for management.\textsuperscript{54} Many brokers assert that if a broker disagrees with management, his obligation is to advise customers to sell the issuer's securities rather than to attempt to change management by voting.

The Commission attempted to assess the impact of broker voting under the ten-day rule. Since brokers cannot vote on any matter which may affect substantially the rights or privileges of a customer's securities,\textsuperscript{55} their sphere of influence is necessarily limited. On the other hand, many brokers assert that without their vote some issuers could not achieve a quorum at their annual meeting. To determine the proportionate share of proxies representing broker voting pursuant to a ten-day rule, the Commission surveyed issuers as to the vote obtained on ten-day rule matters and the vote obtained on non-ten-day rule matters. The vote on non-ten-day rule matters should be lower

\textsuperscript{50} See supra p. 15.
\textsuperscript{51} The Senate Report accompanying the Act stated: "The rules and regulations [promulgated by the Commission under Section 14(b)] will ... render it impossible for brokers having no beneficial interest in a security to usurp the franchise power of their customers and thereby deprive the latter of their voice in the control of the corporations in which they hold securities." S. Rep. No. 1455, 73d Cong., 2d Sess. 77 (1934).
\textsuperscript{52} A recent report detailing institutional holdings in the securities of United States corporations commented: "At this stage, ... it seems fair to conclude that the stocks held in nominee accounts of banks' trust departments and in other institutions do in fact put these institutions in a position where they can exert significant influence, through voting and otherwise, on corporate decisions and policies." Subcommittee on Intergovernmental Relations and Budgeting, Management and Expenditures of the Senate Committee on Government Operations, Disclosure of Corporate Ownership, S. Doc. No. 93-62, 93d Cong., 2d Sess. 137 (1974).
\textsuperscript{53} If an intermediary acts pursuant to a customer's instruction or as a fiduciary legally representing the customer's interests, the effect of that intermediary on corporate affairs may be significant, but it arises out of a contract or other legal relationship between intermediary and shareowner and not as a side effect of nominee and street name registration of securities.
\textsuperscript{54} Supra p. 15.
\textsuperscript{55} Supra p. 15.
than the vote on ten-day rule matters, since the former represents only the vote of shareowners entitled to vote, while the latter reflects, in addition, shares voted by brokers without specific customer authorization. For all issuers surveyed, the average differential was 5.3 percent, with issuers having 5,000 to 10,000 recordholders experiencing the greatest drop (10.2 percent), and issuers having more than 500,000 recordholders experiencing the smallest drop (two percent).36 

In all but two of 163 instances reported in the survey the non-ten-day rule vote would have been sufficient to constitute a quorum.37 In addition, only 14 percent of the issuers surveyed by the Commission were concerned that they might have problems in obtaining a quorum without the ten-day rule vote. While these data cannot be extrapolated to prove that issuers would not experience difficulty in obtaining a quorum if ten-day rule voting were proscribed, they do indicate that broker voting under the ten-day rule is not as important in obtaining a quorum as some brokers suggest. The Commission is not aware of any significant shareowner dissatisfaction with broker voting pursuant to a ten-day rule.

The Commission has found a rather widespread misinterpretation of the ten-day rule, however, which may infringe shareowners' rights. Under the ten-day rules of the NYSE and Amex, although a broker may give its proxy ten days before the meeting with regard to securities not voted by customers, the broker is obligated to change its proxy if, within the ten-day period, a customer gives voting instructions in a manner which countermands the proxy given by the broker. Over 24 percent of the NYSE and Amex members responding to the survey which vote under the ten-day rule stated that they establish a time prior to an issuer's annual meeting after which voting instructions received from customers are not given effect.38 The ten-day rules of the Midwest and Boston Stock Exchanges do not specifically require members to change their vote if customers' voting instructions are received within ten days of an issuer's meeting.

(ii) Transmission of quarterly reports and other routine communications

The system for distributing quarterly reports is less efficient than the system for distributing annual reports and proxies. Many issuers do not send a search card in connection with the distribution of quarterly reports, but simply distribute the report to those who are shareholders of record on the mailing date.39 When the broker-recordholder receives a copy of the quarterly report in the mail, he requests from the issuer an appropriate number of copies for forwarding to shareowners.40 This haphazard ordering process frequently delays the receipt of materials by shareowners. To avoid such delays, some issuers send the interme-

36 In several instances, the expected differential did not appear. One issuer stated that broker intermediaries never vote its shares pursuant to the 10-day rule. Another suggested that brokers were not confusing their 10-day rule voting to routine matters but were voting on all matters. The Commission has found no evidence to support this contention.
37 Presumed to be 50 percent plus one. The survey did not inquire whether the issuers undertook special efforts to solicit proxies on non-ten-day rule matters. Furthermore, shareowners may be more inclined to vote on non-ten-day rule matters since they are non-routine matters.
38 Over half of those brokers do not give effect to customers' voting instructions received less than a week before the meeting.
39 The distribution of quarterly reports is not governed by the Act, and the sending of search cards is not required.
40 In general, the financial community is unaware in advance of the distribution because there is no record date.
diary as many copies of the quarterly report as it requested of the last annual report.\(^61\)

Brokers also are responsible for the lower efficiency of the system. While virtually all brokers state that they forward proxy materials and annual reports, only 77 percent indicated that they normally forward quarterly reports to customers. Other routine communications, principally press releases, are forwarded by less than 60 percent of the brokers.

(iii) Transmission of non-routine communications

Few issuers have been involved in a tender offer or counter solicitation of proxies. As a result, 54 percent of the responding issuers had no opinion as to the effectiveness of the current system for transmitting non-routine communications; seven percent were satisfied; and nine percent were dissatisfied. Brokers on the other hand, because they hold securities of many issuers, frequently are involved in transmitting non-routine communications. Only 15 percent of the brokers had no opinion or gave no response as to the current system’s efficacy. Seventy-two percent were satisfied with the system, and 13 percent indicated dissatisfaction.

The Commission has released for public comment proposed rules regarding tender offers and has recently adopted amendments to rules concerning dissident shareowner proposals.\(^62\) Furthermore, the Commission is continuing to study this area. Accordingly, the Commission has made no judgments about the transmission of non-routine communications at this time.

(iv) Reimbursement of expenses

The cost to issuers of forwarding materials through intermediaries is substantially greater than the cost of mailing materials directly to their shareholders.\(^63\) Nevertheless, only 30 percent of the responding issuers indicated that they believe the current system entails costs which should be reduced or eliminated. Strikingly, only 25 percent of the issuers maintained that the costs of the current system should be reallocated among issuers, brokers, banks and shareowners.\(^64\)

Brokers generally are satisfied with the cost and cost allocation of the current system. Only 23 percent of the responding brokers consider the current system to have excessive costs. Seventy percent of the responding brokers do not believe that the costs of the current system should be reallocated among issuers, intermediaries, and shareowners.

\(^{61}\) Thirty-four percent of the responding brokers were dissatisfied with the system for forwarding quarterly reports, generally for one of three reasons: (a) issuers do not send search cards; (b) issuers are more casual about quarterly reports, failing to fill orders promptly or to send materials; or (c) issuers do not reimburse brokers for forwarding quarterly reports and other routine communications. Although brokers frequently complained about non-reimbursement, ninety-four percent of the responding issuers indicated that they reimburse intermediaries for forwarding quarterly reports.

\(^{63}\) See supra pp. 23-27.

\(^{64}\) There is one matter over which many issuers are concerned, however. They state that frequently they are billed for the forwarding of communications by persons who are not shareholders of record and who do not otherwise represent beneficial owners of the issuers’ securities. According to the issuers, such persons either order and bill for materials which they do not distribute, submit a fraudulent bill, or bill for the distribution of materials to persons who are not shareholders, such as libraries or publishing services. The American Society of Corporate Secretaries has published a list of persons it alleges have engaged in incorrect billing. The list is widely used in the issuer community in reviewing billings, but some issuers continue to express concern over the practice. The Commission believes that measures should be taken against persons who fraudulently engage in this practice. Accordingly, the Commission has discussed the matter with the American Society of Corporate Secretaries and the North American Securities Administrators Association, the organization of state securities administrators. The Society and the Association have agreed to establish a liaison with the objective of determining ways to eradicate this practice.
Although the evidence developed by the Study indicates that the current system is performing adequately, the Commission carefully considered the six alternatives set forth in the Preliminary Report to determine whether any of them might produce a significant improvement in shareowner communications. The Commission considered also whether the alternatives could be achieved at a reasonable cost and would carry forward the improvements made in recent years in securities transaction processing which depend upon nominee arrangements and the use of depositories. None of the alternative approaches appears to meet those criteria.

In examining the alternative approaches, the Study found that one problem common to each was the lack of an industry-wide system for the effective transmittal of records and information. Since the paperwork crisis of 1969, the securities industry increasingly has turned to the use of computers to maintain and process records and information. The development of computerized recordkeeping systems in the securities industry, however, has been characterized by the design of systems to fit individual needs and methods of recordkeeping; little standardization has developed. As a result, different computer systems often use different media and codes.63

In addition, there is no standard format for records and information in computer programs. For example, a broker may program his records so that the account number appears first, the name of the customer second and the customer’s address third. An issuer, on the other hand, may format its records so that the shareowner’s name appears first, his address second and the size of his holding third. They may employ different abbreviations.

Each of the alternative approaches to shareowner communications would produce a substantial increase in the flow of records and information among the various participants in the securities industry or would rechannel that flow and require the development of new lines of communication. The development of an industry-wide system for the rapid transmission of records and information would entail significant costs which must be measured against the potential benefits of each alternative.

A. REGISTRATION IN THE NAME OF THE BENEFICIAL OWNER

Under this approach, securities held by banks in custody accounts and securities held by brokers would be registered in customers’ names. Securities held by a bank as trustee or executor or in a similar capacity would be registered in “same name” registration, for example, in the name of “First National Bank as Trustee for John Doe,” or as trustee under a specific trust agreement or will.64

---

63 Records and information are transferred among different computer systems by the use of various devices, or “media.” Among the more common types of media are cards, tapes, discs, drums and direct wire connections. Data are represented on these media by different codes. In order to transfer the information between computer systems, the receiving system first must have the proper equipment to extract or “read” the information contained on a medium, and second, must be able to decode what it has read and convert that information into the code that the system is using. The more sophisticated computer systems today have reading devices for most or all of the more commonly used media, and there exist a number of standardized codes. Some systems have pre-established programs for converting data from one standardized code to another.

Support for this approach came from a number of issuers who believe that the advantages of full disclosure of beneficial ownership and direct issuer-shareowner communications outweigh the impact of this approach on the securities transaction processing system and on the operations of brokers, banks and issuers. Over one-fifth of the issuers responding to the American Society of Corporate Secretaries' survey (21.3 percent) ranked this first among the seven approaches, while 17.3 percent rated it second, and 12.3 percent rated it third. At the same time, 20.6 percent of the issuers responding to the Society's survey were "most opposed" to this alternative, more than for any other approach. The dichotomy in issuers' responses to this approach apparently arises from a desire to know the names of beneficial owners on one hand, and a concern that transaction processing economies would be lost on the other.

Other commentors also were concerned that recent improvements in securities transaction processing which depend on nominee name arrangements would be lost if this alternative were adopted. One broker stated that "while the method would provide greater disclosure, the problems created for securities processing would be enormous." The Committee of Publicly Owned Companies, in commenting on the Preliminary Report, stated that although it supported modifications of the current shareowner communications process, it remained "committed to the principle of not wishing to disturb the processing and transfer benefits accruing from the system of street name or nominee registrations." The California Bankers Association considered the elimination of nominees to be "a drastic, unwarranted step." A number of brokers and banks also were concerned that this alternative would invade their customers' right to privacy.

A problem for intermediaries under this approach is that they would have to discontinue the use of jumbo certificates (certificates representing the combined interests of many customers) and replace them with a significantly larger number of certificates registered in their customers' individual names. The maintenance of this larger number of certificates would require additional recordkeeping and expanded safekeeping facilities. Moreover, the advances made in securities transaction processing since the paperwork crisis of the late 1960's depend upon the use of nominee name arrangements. Wholesale registration of securities in the name of the beneficial owner would, under current practice, require that the completion of transactions be accompanied by certificate delivery and transfer of record ownership. Under such conditions and at current volume levels, the securities industry could not effect transactions in a timely manner.

B. MULTIPLE NAME REGISTRATION

Under this approach, issuers would maintain their registration records in more than one name. Multi-level registration would permit

---

67 That is, the six alternatives and retention of the present system.
68 Some issuers responding to the Society's survey suggested that this alternative was the "most practical and useful manner in which a company could get to know who were the beneficial owners of its stock." The results of the survey are reproduced in Appendix 1.
69 Sixty-five percent of the respondents to the Society's survey indicated that they would look favorably on some system which would effect disclosure of the names of beneficial owners to issuers. The Society stated that a "pervasive" attitude among the members responding to its survey was "the belief that the issuer should have a right to know who are the beneficial owners of its stock, and that regardless of the system adopted, disclosure of a company's stock [sic] must be required."
securities to be registered in the name of the broker or institution for the purpose of negotiating transfer and in the name of the beneficial owner for the purpose of receiving issuer communications and disclosing beneficial ownership information.\(^{70}\)

As with each approach requiring disclosure, the brokers and banks felt it would impinge upon their customers' right to privacy. This approach received little support from issuers or transfer agents who commented that it would be costly and would impose significant recordkeeping burdens. Transfer agents would be required to maintain sub-accounts on their books, a service which many advised the Commission they could not provide without an extensive and costly reprogramming of their computers.\(^{71}\) Only 1.9 percent of the American Society of Corporate Secretaries' respondents rated this alternative first. In terms of mean response to the Society's survey, this alternative ranked sixth; in terms of median response it ranked fifth.

This approach also would have an adverse impact on the current system for clearing and settling securities transactions because the completion of each securities transaction would have to be accompanied by a transfer of record ownership.

C. CENTRAL MAILING CONCEPT

This approach contemplates the mailing of proxies and the processing of other shareowner materials through a centralized system involving securities depositories. Prior to a meeting of stockholders, on notice sent by the issuer, brokers would forward to the depository their customer positions in the issuer's securities as of the record date. The depository would create a master list for each security and promptly thereafter advise the issuer of the number of sets of materials required. The issuer would forward the materials to the depository which would mail them to shareowners; proxies could be returned to the depository for tabulation or mailed directly to the issuer.\(^{72}\)

One large New York broker strongly supported this approach but suggested the creation of a new entity to carry out the function rather than employing the securities depositories. This commentor suggested that "[t]he problem all lies in the physical handling and distribution of materials. . . . One must personally view the horrendous amount of bulk that is received during the proxy season at brokerage firms to recognize the chaos that it causes." [Emphasis deleted.] The commentor felt that a new central mailing entity would simplify and facilitate the entire procedure.

Other commentors did not view the approach as favorably. One broker stated that "the cost of establishing [a central mailing entity] would be far out of proportion to the benefits [to be] derived from this service." Two of the major securities depositories stated that they were ill-equipped to carry out the role proposed for them,\(^{73}\)

\(^{70}\) Preliminary Report 25.

\(^{71}\) The Western Stock Transfer Association, Inc. stated: "This alternative is fraught with problems of economies and expanded communications. Procedures now in use by most of our members' firms do not provide for sub-accounts; so most of our programs for handling shareholder records would have to be revised, incurring considerable cost and time for re-programming. Changes in beneficial ownership of street name or nominee shares would cause greatly increased notices and confirmations between brokers and nominees and transfer agents, to say nothing of the additional clerical work to update files. WSTA must ask the Commission to give this alternative a very low priority."

\(^{72}\) Preliminary Report 26.

\(^{73}\) The third major depository was not interviewed.
since depositories are most effective in performing computer-oriented
functions and least effective in performing manual ones. As evidence of
this, they cited the experience of depositories prior to the omnibus
proxy procedure 74 and suggested that central mailing would be an
unfortunate step backward. They also felt that it would be inappropri-
ate for depositories to service individual shareowner accounts.

A number of commentors thought that this approach would delay
shareowner communications by adding an additional layer to the
communications process or pointed out the danger of overcentraliza-
tion with the resultant vulnerability of the system. Also mentioned as
deterrent to this approach was the need for a separate system for
securities not eligible for inclusion in a depository. Among the re-
spondents to the American Society of Corporate Secretaries' survey,
only 2.4 percent rated this alternative first, and only 17.3 percent
listed it as one of their top three choices.

D. CENTRAL ORDER PROCESSING

Under this approach, the depository would order proxy and other
shareowner materials on behalf of its participants and perform certain
accounting services but would not mail the materials.75

The depositories had the same objection to this approach as to the
central mailing concept, and the approach received little support from the
bank, broker, or issuer communities. The American Society of
Corporate Secretaries reported that less than one percent of its re-
sponding issuers listed this as a most favored alternative, while
almost 60 percent rated it in the bottom three categories. Most com-
mentors felt this approach would be more costly than the present
communications system and would not produce better results.

E. DISCLOSURE OF BENEFICIAL OWNERSHIP FOR PURPOSES OF
SHAREOWNER COMMUNICATIONS 76

Under this alternative, brokers and banks would disclose to issuers
the names of customers for whom the intermediaries act as custodian.
Issuers then would distribute communications and dividends directly
to shareowners.77

This alternative was proposed to the Commission during the
Beneficial Ownership Hearings in 1974,78 and in August 1975 the
Commission proposed Rule 14b–1(b) which would permit brokers to
fulfill their obligations in transmitting shareowner communications by
voluntarily disclosing customers' names.79 Subsequently, the Pre-
liminary Report suggested disclosure as an alternative for improving the
communications system.

---

74 See supra p. 15.
75 Preliminary Report 27.
76 In this Report, disclosure of beneficial ownership as a means of implementing direct issuer-shareowner
communications is distinguished from disclosure as a means of identifying and monitoring beneficial owner-
ship of securities. Disclosure for purposes other than shareowner communications is discussed infra pp. 49
et seq.
77 Preliminary Report 24-25.
78 Hearings in the Matter of Beneficial Ownership, Takeovers and Acquisitions of Securities by Foreign
and Domestic Persons Before the Securities and Exchange Commission, File No. 4-175 (1974).
Disclosure is supported by a substantial segment of the issuer community, but the bases of that support vary. Some issuers supported it as a means of facilitating direct issuer-shareowner communications; others wanted the names to monitor investment in the company; still others wanted the names available as an alternative for times when they believe the communications system is not operating effectively.

Strong support for disclosure came from smaller issuers who argued that in their experience the current communications system is not working well. Larger issuers feared the operational difficulties which would be created if they were required to communicate directly with all of the shareowners now represented by brokers and banks. One issuer, in commenting on proposed Rule 14b-1(b), stated: "Should the Commission promulgate a rule which would require the issuer to assume the burden of direct communication with beneficial owners, we would be constrained to administer at least 10,500 additional mailings on an individual basis without the benefit of a computer listing. The cost of such a burden in terms of additional staff, time limitations and the orderly administration of our stock transfer office would far eclipse the amount for which we would otherwise expend [sic] to reimburse brokers for their having communicated directly with their customers." Support for disclosure also came from some members of the banking and brokerage community. These intermediaries believe that the operation of the proxy department is a burdensome and unproductive segment of their business that is at best marginally profitable. As a result, they would be willing to disclose the names of their customers to issuers if it would allow them to drop out of the communications process. Generally, however, intermediaries were opposed to disclosure of beneficial ownership. They argued that disclosure would constitute an unwarranted invasion of their customers' privacy unless it could be demonstrated that the communications system has grave deficiencies.

18 Among the respondents to the American Society of Corporate Secretaries' survey, 22.5 percent listed this as the most favored alternative, while 29.6 percent ranked it second, and 14.9 percent ranked it third. In another seven and median response, the Society's survey respondents ranked this alternative first among the seven approaches listed in the Preliminary Report. Analyzing the responses to the American Society's survey according to size of issuer, the disclosure alternative ranked first, in terms of mean and median response, among issuers with 10,000 or fewer recordholders, and second (to retention of the present system) among issuers with more than 10,000 recordholders. Of the issuers responding to the Commission's survey, 57 percent favored disclosure of beneficial ownership, while 26 percent did not, and 17 percent had no response or no opinion.

81 A number of brokers and banks suggested that the primary motive of smaller issuers in seeking disclosure is a desire to combat tender offers and adverse takeovers rather than to improve communications. Some issuers confirmed that this was their motivation in part but argued that their interest in communicating effectively with their shareowners was paramount.

82 Another issuer estimated that it would receive an additional 20,000 names from brokers for each annual meeting and recited the problems that would be created:

"This raw data [names received from brokers] could not be added to the master list of records as it would create confusion with the current list... Thus a new computer program would have to be created, tested, and put into use.

83 For each beneficial owner, a minimum of five items of information must be encoded. For 20,000 names, 100,000 items must be encoded. Thereafter the encoded material must be keypunched, transferred to the new computer tape, and then checked to correct errors."

84 A number of these intermediaries have in the past voluntarily disclosed their customers' names to issuers.

85 Brokers were concerned about the confidentiality of their customer lists and argued that disclosure could result in the loss of customers to competitors. In response to this concern, many issuers suggested that access to information regarding the identities of beneficial owners could be restricted. Brokers, however, disagreed emphatically, arguing that once disclosure were made, it would be impossible, as a practical matter, to preserve the confidentiality of their customer lists. In addition, many banks feared that disclosure would violate state banking laws which prohibit fiduciaries from disclosing the aspects of a trust. Another of their concerns was that the complexities of trust arrangements would make it difficult in some situations to determine the name to be disclosed.
The Commission's survey indicates that shareowners as a group are less concerned than intermediaries about the disclosure of their names to issuers. Almost 88 percent of the responding shareowners whose securities are held in street or nominee name indicated that they would not object to disclosure for purposes of direct communication. Those who objected tended to be larger shareowners or bank customers. Among those owning 100 shares or less, 5.2 percent were opposed; among those owning 501 to 1,000 shares, 10.2 percent were opposed; and among those owning more than 10,000 shares, 19.3 percent objected. Almost 21 percent of the bank customers responding to the survey objected to disclosure while only 8.2 percent of the brokerage customers raised an objection.85

Because of the strong support for this approach from many issuers, the Commission sought to determine whether the problems associated with it could be overcome. Both proponents and opponents agreed that unless disclosure were mandatory, little would be accomplished. Issuers argued that a voluntary system would be worse than complete disclosure because they would have to maintain a dual operation, reprogramming their computers to accept additional names but continuing to forward communications through intermediaries as well.86 Most brokers and banks indicated they would not disclose their customers' names unless required.

To deal with intermediaries' concerns about privacy and the confidentiality of their customer lists, some commentors suggested interposing depositories between intermediaries and issuers. The depositories would receive the customers' names, alphabetize them, standardize the format, and remove any information relating customers to particular intermediaries. The depositories asserted, as with central order processing, that they are not organized to perform this role. Other commentors suggested that issuers can already obtain a measure of disclosure by sending cards through intermediaries asking the shareowners to contact the issuer if they wish to receive communications directly. This approach does not impose any burdens on intermediaries, but the list of names obtained by the issuer cannot be used to determine persons entitled to vote.

Disclosure of the names of shareowners by intermediaries to issuers would not interfere with those functions of the securities and banking industries which depend on nominee name arrangements. It would, however, impose substantial recordkeeping burdens on intermediaries and many issuers, and does not appear feasible absent the development of a compatible industry-wide computer system for the transmission of names and the development of a standard format.

F. TRANSFER AGENT DEPOSITORY CONCEPT

The transfer agent depository ("TAD") would replace the certificate with computerized stockowner lists, maintained by the transfer agent, which would serve as both the issuer's stock records and the share-

85 This statistic may result from the tendency of large shareholders to leave securities with bank custodians rather than with brokers.

86 One suggested approach was to have intermediaries poll customers as to whether they would object to having their names disclosed. Customers desiring privacy could continue to have shareowner communications sent through the intermediaries; others could receive communications directly. In addition to the problem of maintaining dual operations, issuers suggested that this would make planning difficult since they would be uncertain in any year how many intermediaries would forward customers' names. Intermediaries expressed concern that they would have to bear the initial and continuing expense of polling customers, which several large brokers argued would be substantial.
owner's evidence of ownership. Following a trade, upon the instruction of a selling customer or his broker, the TAD would transfer securities by book entry from the selling customer's account to the buying customer's account and would notify the customers and their brokers of completion of the transfer. The transfer would be performed by means of a message-switching center interposed between the customer or broker and each transfer agent.87

To the extent the stock certificate were eliminated, the interpositioning of a computer switching center between the transfer agent and the broker and banking communities would permit multiple high speed transfers of record ownership. Therefore, securities could be held in the name of the beneficial owner without disrupting the system for clearing and settling securities transactions. Customers wanting to maintain privacy or owning securities through arrangements requiring the intervention of an intermediary could continue to register the securities in the name of the intermediary.

The TAD concept received support from various elements of the issuer, banking and brokerage communities. The survey of the American Society of Corporate Secretaries indicated that 17.5 percent of the responding issuers rated the transfer agent depository concept first, 15.4 percent rated it second, and 9.5 percent rated it third. In general, it ranked in the middle of the various alternatives in terms of mean and median response.

The principal concern regarding TAD, even among those commenting favorably, was the belief that problems involved in its implementation were too significant to make TAD a short-term alternative. One issuer stated, "[a]ssuming that a 'Certificateless Society' was an immediate possibility, this alternative could be very beneficial.* * * However, in reality, because of time and standardization costs, we feel that there would not be an immediate enough benefit from further consideration of this alternative." A large broker commented that, "[a]lthough this alternative is attractive and will probably be a necessary development in the goal of a certificateless society, we believe that there are other steps which need to be taken * * * before we can use such a system for the distribution of proxy material." A major west coast bank stated: "The transfer agent depository concept * * * may have some long run promise, but it would seem to presuppose a highly integrated national computerized 'book entry' system which simply doesn't yet exist. High costs of implementation plus lack of compatible systems among users indicate that this alternative is unrealistic at this time."

B. Conclusions

The current system for transmitting issuer-shareowner communications through intermediaries is functioning reasonably well. Empirical data developed by the Commission show that while transmission through intermediaries is more circuitous, materials are received by shareowners in a timely manner whether they are transmitted directly by an issuer or through an intermediary. The problems in transmission which do occur appear to be traceable to failures on the part of individual issuers or intermediaries rather than to weaknesses in the system. In particular, a number of issuers fail to announce their

record dates or to send search cards in a timely manner. In general, however, the data do not reveal any intrinsic weak links which portend future breakdowns.

The Commission has not found any apparent relationship between measures of intermediary activity in the proxy distribution process and issuers' success in soliciting proxies. Rather, issuers' ability to obtain a sufficient voting response appears to be dependent upon factors other than the extent to which their securities are held in nominee and street name.

Most of the participants perceive the system to be adequate to meet their needs. Shareowners have little concern about the manner in which communications are now handled. While issuers and intermediaries raised some problems, they generally can be mitigated without significant revision of the current system.

The Commission has concluded that no alternative approach would facilitate shareowner communications without disrupting the current system of clearance and settlement, imposing significant costs and recordkeeping requirements on participants, or involving major computer development. In view of the Commission's conclusion that the current system is adequate, the Commission believes that imposition of the substantial burdens involved in implementing an alternative system is not justified.

The TAD concept exhibits promise as an important long-term alternative. It is not, however, a system for streamlining communications but rather an approach to a national clearance and settlement system which, as a by-product, would improve issuer-shareowner communications. Development of TAD, therefore, must be integrated with other developments in clearance and settlement. The Commission will continue to encourage consideration of the TAD system in carrying out the Commission's responsibilities under Section 17A of the Act.

In view of the foregoing, the Commission concludes that the practice of registering securities in other than the name of the beneficial owner is consistent with the purposes of the Act regarding issuer-shareowner communications, with particular reference to Section 14 relating to the solicitation of proxies. Nevertheless, there are a number of steps which can be taken to improve issuer-shareowner communications while retaining the benefits of the practice of registering securities in nominee and street name.

C. Recommendations

1. The Commission will review the recommendation of the Study that issuers be required to announce any annual or special meeting of shareholders at least ten days prior to the record date and to specify in that announcement the record date, meeting date and other pertinent information.

2. The Commission has under consideration adoption of proposed Rule 14b-1(a) and related amendments to Rule 14a-3(d) with minor changes.88

Proposed Rule 14b-1(a) would require brokers to respond by means of a search card or otherwise to an inquiry from an issuer made in accordance with Rule 14a-3(d) with respect to how many of the

broker's customers are beneficial owners of the issuer's securities which are held of record by the broker or its nominee. Upon receipt of a sufficient number of proxies and annual reports, and assurances that its reasonable expenses would be paid by the issuer, the broker would be required to forward such materials to its customers.

Amended Rule 14a-3(d) would require issuers to carry out their obligation in distributing materials in a manner which would reflect the complementary obligation imposed on brokers by proposed Rule 14b-1(a). Specifically, it would require issuers to make inquiry of brokers at least ten days prior to their record dates and to supply requested materials promptly.

The rules would not add any new procedures to the issuer-shareowner communications process. Rather, they would formalize the distribution process already employed by most brokers and issuers. Nevertheless, the Commission is considering adoption in view of the data gathered by the Study which indicate that some brokers and issuers are unfamiliar with the search card procedure or do not follow it.

3. The Commission will evaluate the recommendation of the Study that brokers be required to forward all shareowner communications which the issuer supplies to the broker in sufficient quantities and for the forwarding of which the issuer is willing to reimburse the brokers' reasonable expenses. Brokers often do not forward shareowner communications even when issuers are willing to supply the materials and provide reimbursement. The decision of those brokers as to what materials should be forwarded generally is based on the broker's assessment of the "importance" of the communications. The Commission deems it inappropriate, in general, for brokers to determine whether communications from issuers should be forwarded to shareowners. Decisions as to the scope, relevance, or frequency of communications to be transmitted to shareowners should rest with the issuer.

4. The Commission has under consideration withdrawal of proposed Rule 14b-1(b) and related amendments to Rule 14a-3(d). Rule 14b-1(b) would permit brokers to satisfy their obligation to forward communications to their customers by providing to the issuer a list of the shareowners, their addresses and their holdings. Issuers would then be required under the proposed amendments to Rule 14a-3(d) to communicate directly with their shareowners. The withdrawal of these rules is being considered on the basis of the Study's finding that the procedures suggested for effecting direct issuer-shareowner communications would significantly disrupt the present system for clearing and settling securities transactions or would place undue regulatory and economic burdens on issuers and brokers.

5. To make clear that customers' voting instructions, received any reasonable length of time prior to an issuers' meeting, must be given effect, the Boston and Midwest Stock Exchanges should amend their rules, and the New York and American Stock Exchanges should undertake a program to review their ten-day rules with their members. Failure to give effect to such instructions may interfere unduly with the ability of shareowners to vote their securities.

*Id.*
6. An advisory committee will be proposed by the Commission (a) to focus on the development of standard forms and procedures for the transmission of shareowner communications and the solicitation of proxies and (b) to seek ways to implement such forms and procedures throughout the securities industry on a voluntary basis.

Most brokers, banks, and issuers agree that the use of standard forms and procedures could significantly improve the efficiency of the communications process. They would prefer, however, that such standards be implemented through self-regulation. The Commission concurs in the belief that a self-regulatory approach is appropriate. In the past, progress in this area has been slow because there is no single body which represents all of the participants in the communications process or which has the authority or influence to institute industry-wide standards. The Commission believes a federal advisory committee could perform this role.

If the self-regulatory approach proves unsuccessful, the Commission will consider exercising its rulemaking power to achieve standardization in shareowner communications. In making this determination, however, the Commission will consider carefully the apparent general satisfaction of brokers, banks, issuers and shareowners with the existing communications system. The Commission will seek to balance the potential benefits of any such changes against the regulatory and financial burdens which would be imposed.

7. The national securities exchanges and the NASD jointly should prepare a brochure for distribution to brokers' customers explaining the benefits and consequences of leaving securities in street name. The Commission's survey data indicate that many customers do not realize that securities left with a broker will be registered in the broker's name, that communications will be sent to them indirectly through the broker, and that dividends will be credited by the broker to their account. This sometimes results in customer dissatisfaction even where brokers have adhered to high standards in transmitting communications.
CHAPTER IV

THE PRACTICE AS IT AFFECTS DISCLOSURE OF BENEFICIAL OWNERSHIP FOR PURPOSES OTHER THAN ISSUER-SHAREOWNER COMMUNICATIONS

A. Discussion

The practice of registering securities in nominee and street name interposes between the issuer and the beneficial owner an intermediary which may effectively mask the identity of the beneficial owner from the issuer and the public. Although it is possible, in most cases, to identify brokers or banks which hold securities through a depository or institutional nominee,¹ brokers and banks have been generally unwilling to make available to issuers or to the public information about the individuals or institutions on whose behalf the securities are held.

During the past several years, the Senate Committee on Government Operations and its subcommittees have conducted extensive hearings and issued several reports on the lack of readily accessible coordinated information regarding substantial beneficial owners. Congress has voiced concern that nominee and street name registration may deprive the investing public of ownership information which is relevant to their investment and voting decisions and may make it more difficult for governmental entities to carry out their regulatory responsibilities.

The Commission has examined the impact of the practice on the existing disclosure requirements of the Act to determine (1) whether additional legislation should be sought in order to assure public availability of information regarding substantial beneficial owners and (2) whether the practice impedes effective enforcement of existing disclosure requirements.

A. DISCLOSURE BY BENEFICIAL OWNERS

Section 16(a), the Act's only beneficial ownership disclosure provision of general application, requires any person who becomes the beneficial owner of more than ten percent of any class of equity security of a publicly-held company² (or who is a director or officer of the company) to file with the Commission a statement listing the amount of that issuer's equity securities so owned. Thereafter, any change in ownership must be reported within ten days after the close of the calendar month in which such change occurs.

¹ If the securities are held in the nominee name of a depository, the depository will make available to the issuer a listing of each participant's holdings in the issuer's securities. If securities are held in the nominee name of a bank or other institution, the bank or institution can usually be readily identified by consulting the Nominee List which is published annually by the American Society of Corporate Secretaries.
² A "publicly-held" company, as used hereinafter, is any issuer whose securities are registered pursuant to Section 12 of the Act.
Section 13(d) requires any person (or group) who, after acquiring ownership of certain equity securities, is the beneficial owner of more than five percent of any class of such securities to disclose, among other things, that person’s name, address, occupational background, source of funds, and purpose in effecting the acquisition, as well as the number of shares of the subject security which are beneficially owned by such person and each associated person. Thereafter, any material change in ownership must likewise be reported.

Section 14(d) requires a person (or group) who, after consummation of a tender offer, would be the beneficial owner of more than five percent of any class of a Section 13(d) security, to disclose the information specified in Section 13(d) and certain additional information which the Commission has prescribed.

Sections 13(d) and 14(d) are not disclosure provisions of general application. Neither Section requires reporting of any acquisition which, together with all other acquisitions of the same class during the preceding twelve months by the same person or group, does not exceed two percent of that class. Moreover, the provisions do not require disclosure by five percent beneficial owners who acquired their ownership interest prior to the enactment of the five percent disclosure threshold in 1970. Congress sought to treat what it considered to be, at the time of enactment, an immediate manifestation of the broader problem of the potential ability of substantial shareholders to dominate shareholder voting or to influence significantly corporate management. Underlying Congress’ solution was a determination that five percent ownership in a publicly-held company is often sufficient to influence management.

After enactment of Sections 13(d) and 14(d), Congress focused increased attention on the role of large institutional shareholders. Concerned, among other things, about the potential ability of such shareholders to influence corporate management and to affect the market for a corporation’s stock because of the amount of securities over which they exercise investment discretion, Congress enacted Section 13(f) as part of the Securities Acts Amendments of 1975. Upon implementation by Commission rule, Section 13(f) will require institutional investors to file with the Commission information with respect to their holdings in Section 13(d) securities for accounts over which they exercise investment discretion.

---

1 Hereinafter referred to as “Section 13(d) securities.” In addition to securities registered pursuant to Section 12, Section 13(d) securities include insurance company securities exempted by Section 12(g)(2)(G) and securities issued by closed-end investment companies registered under the Investment Company Act of 1940, exempted by Section 12(g)(2)(B).
2 Sections 13(d)(6)(B) and 14(d)(6)(A) of the Act.
3 Senator Williams, a sponsor of the legislation, stated: “Stockholdings of between 5 and 10 percent in [large] * * * companies are in many instances a controlling interest. Here * * * the full disclosure requirements of the Securities Exchange Act are necessary for adequate investor protection.” 116 Cong. Rec. 3024 (1970).
4 The Senate Report accompanying the legislation stated: “An investment of between 5 and 10 percent of the securities of a company can have a significant impact on the public market for that company’s stock.” S. Rep. No. 1125, 91st Cong., 2d Sess. 8 (1970).
5 See supra note 52, p. 32.
6 The right to exercise investment discretion over securities may constitute one aspect of beneficial ownership. In the federal securities laws, however, “beneficial ownership” is not defined generally and is used in several different contexts.
7 Institutional investors subject to the reporting requirements of Section 13(f) are those which use the mails or any means or instrumentality of interstate commerce and which exercise investment discretion over Section 13(d) securities having an aggregate market value on the last trading day in any of the preceding twelve months of at least $100,000,000 or such lesser amount (not less than $10,000,000) as the Commission may determine. Section 13(f)(1). The information required to be disclosed includes the name of each entity whose securities are held on the last day of the reporting period in accounts over which the institutional investment manager exercises investment discretion and the title, class, number, and aggregate fair market value of shares so held.
Section 14(a) authorizes the Commission to adopt rules relating to the solicitation of proxies by publicly-held companies. The Commission's rules require each issuer to transmit to recordholders, prior to a shareholders' meeting, a proxy statement which, among other things, identifies any person who owns beneficially or of record more than ten percent of its voting securities. If proxies are not solicited, Section 14(c) requires issuers to forward to recordholders an information statement containing substantially equivalent information. The Commission's rules adopted pursuant to Sections 12 and 13 of the Act require each reporting issuer, at the time of registering its shares and in subsequent periodic reports, to identify each person who is a recordholder of, or is known by the registrant to own beneficially, more than ten percent of any class of voting securities of the issuer.

In addition to these generally applicable reporting provisions, the Commission administers disclosure provisions applicable to particular types of issuers, including registered investment companies, registered public utility holding companies, voting trusts, and registered broker-dealers.  

2. The Need for a Comprehensive Reporting and Publication System

During the 94th Congress, a number of bills were considered which would have (a) expanded the information to be disclosed by beneficial owners subject to the Act's disclosure provisions, (b) lowered the threshold at which reporting by beneficial owners would begin, and (c) established related reporting systems. Although this legislation was not enacted, in assessing the impact of the practice of registering securities in nominee and street name on the purposes of the Act, the Commission has attempted to consider the Congressional concerns behind such legislation as well as the interests of the issuer and financial communities.

Many issuers are not satisfied with the present disclosure provisions. Fifty-seven percent of the issuers responding to the Commission's survey and 65 percent of the issuers responding to the American Society of Corporate Secretaries' survey indicated that they favored some system which would provide them with more information about the beneficial owners of their securities. At the same time, the brokerage and banking communities generally objected to disclosing the names of customers for whom they hold stock in street or nominee name.

The interests of brokers, banks, and issuers must be balanced against the national policy considerations expressed by Congress regarding the right to privacy of individuals on one hand, and the need to have certain information available to regulators and the public on the other. In enacting Sections 13, 14, and 16, Congress sought to strike that balance and determined that disclosure should be required
of persons who, because of the size of their ownership interest, may be able to affect the market in an issuer's securities or significantly influence management by voting or otherwise.

The touchstone of the national disclosure policy in this area is the concept of control or potential control.\textsuperscript{13} Control is, however, an elusive concept. Because shareholder influence is seldom exercised in an open fashion, its incidence and effect are not readily subject to empirical determination. The result is that the appropriate threshold or disclosure is essentially a matter of judgment.

In enacting the Williams Act Amendments in 1970,\textsuperscript{14} Congress determined that persons who own more than five percent of an issuer's securities are in a position potentially to exercise control over the issuer and that, accordingly, this represents the appropriate threshold of disclosure. The Commission concurred in this judgment in determining recently to add to a number of Commission forms and reports a new Item X to require issuers to disclose information regarding persons owning more than five percent of their securities.\textsuperscript{15} In enacting Section 13(f), Congress adopted a different approach for large institutions, but again an underlying Congressional concern was the disclosure of potential influence or control.

In addition to requiring disclosure, Congress has provided for the public availability of pertinent information to investors and others. Congress particularly emphasized the need for public availability of information in enacting Section 13(f), which requires the Commission to make reports filed pursuant thereto available in a way "which will * * * maximize the usefulness of the information to other Federal and State authorities and the public."\textsuperscript{16}

The Commission believes that the Act and the rules thereunder currently may not achieve fully the scope of disclosure or range of dissemination contemplated by Congress. Existing disclosure requirements do not appear to reach all persons who own more than five percent of a Section 13(d) security.\textsuperscript{17} The Commission has not yet completed implementation of Section 13(f). And information gathered under existing Commission rules is not disseminated as widely as might be desirable. Moreover, because of the use of street and nominee names, issuers frequently do not know the identity of large shareholders.\textsuperscript{18} In addition, Congress has been concerned that issuers sometimes fail to report institutional holdings correctly because they do not aggregate an institution's holdings which are distributed among several of the institution's nominees\textsuperscript{19} or because one institution (such as)

\textsuperscript{13} The issuer and financial communities recognize the importance of control in defining a national disclosure policy. Many issuers favoring disclosure desire primarily to know the identities of substantial shareholders who may have the ability to initiate a takeover of the corporation or otherwise affect management's control of the corporation. At the same time, most brokers and banks agree that when a shareholder has an investment which may enable him to exercise control, that shareholder's right to privacy is limited by the public nature of his investment.

\textsuperscript{14} Public Law No. 91-567 (1970).

\textsuperscript{15} As adopted, Item X would be added to certain registration and reporting forms and to proxy and information statements. It would require issuers to disclose the name, address and holdings of any person (or group) known to be the beneficial owner of more than five percent of any class of certain of the issuers' securities. Item X as adopted has not yet been published.

\textsuperscript{16} Section 13(f)(3).

\textsuperscript{17} Sections 13(d) and 14(d) do not apply to any person who acquires less than two percent of a security in a 12-month period; nor do they apply to any person who acquired his ownership interest prior to the enactment of the current thresholds in 1970.

\textsuperscript{18} Accordingly, Commission rules do not require issuers to disclose ownership information which is not known to them or is not within their power to ascertain. See supra p. 49.

\textsuperscript{19} See Subcommittees on Reports, Accounting, and Management of the Senate Committee on Government Operations, 94th Cong., 2d Sess., Corporate Ownership and Control 8-9 (Comm. Print 1975). Some issuers have even listed "Cede & Co.," the nominees of The Depository Trust Company, in their ownership reports. Disclosure of Corporate Ownership, supra note 52, at 181-85.
as a mutual fund) holds securities through another institution (a bank).

3. The Need for Additional Enforcement Powers

The practice of registering securities in nominee and street name may impede Commission efforts to detect attempts by shareowners to evade the Act's disclosure requirements. In recent years, the Commission has experienced difficulty in enforcing Sections 13(d), 14(d), and 16(a) with regard to persons who own securities held in nominee accounts of foreign institutions. In Congressional testimony on June 28, 1976, Chairman Hills related specific instances of evasion of the Act's disclosure provisions and concluded: "[W]e do have reason to believe that foreign financial institutions, intentionally or unintentionally—and probably there are examples of both—permitted substantial ownership or control of U.S. corporations to be accumulated without complying with the disclosure requirements of the U.S. securities laws.

The principal impediment to the effective enforcement of the disclosure provisions against persons utilizing foreign institutions has been the inability of the Commission to use its subpoena powers to obtain from foreign financial institutions information essential to the investigation of disclosure violations. Accordingly, Chairman Hills recommended during his Congressional testimony that:

"[Legislation] should be enacted to spell out the powers of the Federal courts to grant ancillary relief in cases of refusal to comply with subpoenas of the Commission. Such relief would permit a court to restrict transfer of shares, to revoke or suspend the right to vote shares, to prohibit payment of or impound dividends, or to require public sale of the securities involved—obviously only with court order and only in the case where an alleged violation had occurred."

The Chairman also asked that Congress restore the Commission's authority to censure foreign financial institutions engaged in securities laws violations.

20 Corporate Ownership and Control, supra note 19, at 11-12.
21 In Congressional testimony in July 1975, Chairman Garrett stated:

"We have had a great deal of difficulty enforcing any disclosure requirements with respect to persons who are not residents of the United States and who hold through foreign fiduciaries, particularly in countries that have so-called bank secrecy laws. Our efforts to pierce this veil, so to speak, of the Swiss bank secrecy laws is [sic] of long standing, and we are still way behind."

23 For example, the Commission is presently inquiring into a situation where a foreign bank, holding in excess of 5 percent of the stock of a U.S. company, sought to sell what it claimed was effective control of the company to several potential purchasers. American shareholders were unaware of the attempt to sell control of the company because the bank had not made the required disclosure of its ownership interest or its negotiations to sell that ownership interest.

24 In another case, the Commission charged that a foreign individual had concealed a substantial ownership interest amounting to more than 10 percent of the stock of a New York Stock Exchange listed company. Such a major Swiss bank had aided and abetted this violation by breaking up the stock into smaller blocks to evade the U.S. disclosure requirements.

25 Id. at 6.
26 The Securities Act Amendments of 1975 (Pub. L. No. 94-29) removed such authority previously granted by Section 15(b)(7) (now Section 15(b)(6)).
B. Conclusions

The Commission has concluded that the practice of registering securities in nominee or street name is consistent with the purposes of the Act, with particular reference to Sections 13, 14, and 16 regarding disclosure of beneficial ownership.

The Commission has concluded, however, that the following four steps should be taken to unify the present reporting requirements into a comprehensive system for gathering and disseminating information about ownership interests in publicly held companies: (a) all persons owning more than five percent of a Section 13(d) security should be required to report such ownership to the Commission and to the issuer;\(^\text{26}\) (b) issuers should be required to include such information in reports and shareowner communications; (c) implementation of Section 13(f) should be completed, and the information obtained should be made publicly available; and (d) the Commission's authority to assure compliance with the Act's disclosure provisions should be clarified.

C. Recommendations

1. Legislation should be enacted to require any person owning beneficially more than five percent of any class of a Section 13(d) security who is not currently required to report under Section 13(d) of the Act to file with the Commission a short statement detailing relevant ownership information and to transmit such ownership statement to the issuer and to any exchange on which the security in question is listed. The Commission has determined, by adopting Item X, to require reporting issuers to publish information regarding beneficial owners of more than five percent of their securities in proxy and information statements, certain registration statements, and annual reports.

2. The Commission will complete implementation of Section 13(f) to require information from institutions. The Commission will study ways to make this information publicly available and will consider whether benefits would be derived from formatting this information to detail the holdings and voting rights of all reporting institutions in each issuer.

3. The Act should be amended to make clear that the Commission has available to it specific ancillary remedies in instances in which it is unable to obtain information in furtherance of its investigations. In addition, Congress should consider broadening Section 15(b)(6) to grant to the Commission authority to proceed administratively against foreign financial institutions for violations of the Act.

\(^{26}\) Such reports would also be required to be filed with any exchange on which the securities in question are listed.
Chapter V

THE PRACTICE AS IT AFFECTS THE JURISDICTIONAL STANDARDS OF SECTIONS 12(g) AND 15(d)

A. Discussion

Sections 12(g) and 15(d) of the Act make certain issuers whose securities are traded otherwise than on a national securities exchange subject to the Act. Section 12(g) requires such issuers to register with the Commission each class of equity security held of record by at least 500 persons, provided the issuer has total assets exceeding $1,000,000.1 An issuer of a security registered pursuant to Section 12(g) ceases to be subject to the Act if the security comes to be held by fewer than 300 shareholders of record. Section 15(d) requires an issuer which distributes securities pursuant to a registration statement filed with the Commission under the Securities Act of 1933 to meet the same continuing reporting requirements as issuers of securities registered pursuant to Section 12 so long as the security to which the statement relates is held of record by at least 300 persons.

The shareholder-of-record criteria were intended to provide a certain and easily applied measure of public investor interest and to avoid the difficulties inherent in a standard based on the number of beneficial owners. Congress enacted Sections 12(g) and 15(d) on the assumption that there was a significant correlation between the number of recordholders and the number of underlying beneficial owners.2 A substantial increase in the use of nominee and street name registration, however, would attenuate this correlation by combining the holdings of many shareholders into a single nominee of record and could thereby exclude or remove from the jurisdiction of the Act issuers which, in the contemplation of Congress, properly should be subject to the Act.

The Commission does not have available evidence to indicate that any issuer actually has been excluded or removed from the operation of the Act because of the increased use of nominee and street name registration. Moreover, the modest increase in the percentage of securities held in nominee and street name since the enactment of the shareholder-of-record standards in 1964 makes it unlikely that the correlation between the number of recordholders and the number of beneficial owners of an issuer has been significantly affected. In 1965, 23.7 percent of the securities of publicly-owned companies was held in nominee and street name; in 1975, 28.6 percent was held in nominee and street name.3

---

1 Section 12(g)(2) contains exemptions for specified types of securities.
3 New York Stock Exchange, Shareownership U.S.A. 35 (1965); New York Stock Exchange, Shareownership 1975 20 (1976). Publicly-owned companies for purposes of the 1975 NYSE survey were issuers with more than $1 million in assets and 300 recordholders; publicly-owned companies for purposes of the 1965 NYSE survey were those whose securities were traded on an exchange or otherwise available to the general public and held by at least 300 stockholders of record. In most instances, brokers' depository positions were attributed to brokers' holdings, and the remaining depository positions were attributed to nominee holdings. Exhibit 13, p. 54, depicts the change since 1962 in the percentage of shares of publicly-owned companies held in nominee and street name. (53)
Exhibit 13
PUBLICLY-HELD EQUITY SECURITIES IN NOMINEE AND STREET NAME

(PERCENT OF SHARES ISSUED AND OUTSTANDING)

SOURCE: NEW YORK STOCK EXCHANGE SHAREOWNER SURVEYS
U.S. SECURITIES AND EXCHANGE COMMISSION
Even without an increase in the percentage of securities held in nominee and street name, depositories may influence the correlation between the number of recordholders and the number of beneficial owners of an issuer by combining the holdings of many nominees into a single nominee of the depository. Depositories have grown substantially since 1968, and the Commission considers the continued growth of depositories to be an important step in the development of a national system for the clearance and settlement of securities transactions. This growth should not, however, be permitted to affect the jurisdictional standards of Sections 12(g) and 15(d).

B. Conclusions

It is doubtful that the growth of street and nominee name holdings since 1974 has significantly attenuated the correlation between the number of recordholders and the number of underlying beneficial owners. The level of nominee and street name ownership should be periodically monitored, however, to assure that this does not occur. At the same time, the Commission believes that steps should be taken to anticipate further growth of securities depositories. The Commission concludes that the practice is consistent with the purposes of the Act, with particular reference to Sections 12(g) and 15(d) regarding jurisdiction over certain over-the-counter issuers.

C. Recommendations

1. The Commission will consider the recommendation of the Study that it use its power under Section 12(g)(5) of the Act to propose a rule defining the term "held of record" to mean that securities held by a depository or its nominees are held of record by the depositor of the securities. Section 15(d) should be amended to clarify the Commission's power to define "held of record" for purposes of that Section.

2. In connection with this, the Commission will consider the recommendation of the Study that, pursuant to Section 17A, each depository be required to transmit periodically to each issuer whose securities the depository holds of record a list of the persons on whose behalf the depository holds the securities.

*Between 1968 and 1976, the number of shares evidenced by certificates maintained in securities depositories increased from approximately 400 million to over 4 billion.*

\*The 00 Zip code prefix indicates questionnaires returned from residences in Puerto Rico, the Virgin Islands, and foreign countries, as well as questionnaires from shareowners whose cities and States of residence were not stated.

B. Are you an institution (including a trust or an estate) or an individual?
1. Institutions—2,263.
2. Individuals—21,143.
No entry—189.

E. Was the proxy material accompanying this questionnaire forwarded to you by:
1. The corporation whose shares you own?—7,673.
2. A broker?—13,238.
3. A bank?—2,689.

F. If your securities are held by a broker or bank, would you object to having your broker or bank disclose your name and mailing address to the corporation whose shares you own, so that the corporation could communicate with you directly?
1. Yes—1,655.
2. No—13,953.

G. Do the instructions accompanying this proxy material call for you to return the proxy card to:
1. The corporation whose shares you own?—9,746.
2. A broker?—12,554.
3. A bank?—643.
4. Other?—250.
No entry—407.

(50)

80-014-76—5
I. Has it been your practice to vote shares which you own?
   1. Always—16,467.
   2. Sometimes—5,463.
   3. Never—1,417.
   No entry—253.

J. Do you have any complaints regarding the transmission of proxy materials, annual reports or other shareholder communications?
   2. No complaint—15,339.
   4. Complaint regarding shareowner communications—1,762.
   5. Other complaints—1,323.
APPENDIX B

Broker, Bank and Issuer Questionnaires, 1976 Proxy Season Survey—Summaries of Responses to Selected Questions

Technical Notes

1. In Tables 1-16, the number of accounts carried by brokers is based on the number of customer accounts having positions in voting securities held in nominee or street name.

2. The bank responses set forth in Tables 1-13 reflect only the responses of the distributing banks (see Final Report, supra p. 11).

APPENDIX C

SHAREHOLDER, BROKER, BANK AND ISSUER QUESTIONNAIRES AND RELATED INSTRUCTIONS, 1970 PROXY SEASON SURVEY

Questionnaire for Shareholders

Instructions to Issuers for Distributing Shareholder Questionnaire

1. DISTRIBUTION TO INTERMEDIARIES AND INDIVIDUAL SHAREOWNERS

You have received a total of ___ shareholder questionnaires. Please distribute ___ to individual shareholders and ___ to intermediary banks and brokers in accordance with the instructions below.

2. INTERMEDIARIES

You should randomly select 25 percent of the total number of intermediaries (that is, brokers and banks) requesting proxy materials from you, but at a minimum 30 intermediaries should be selected (if the number requesting materials is smaller, please distribute to all). Among the selected intermediaries try to allocate the questionnaires on the basis of the number of sets of proxy material requested by each. Avoid sending any single intermediary more questionnaires than half the number of sets of proxy materials it requests. A set of “Instructions to Brokers and Banks” should be sent to each intermediary selected. These instructions have been supplied by the Commission with the questionnaires.

In the situation where some intermediaries have not yet forwarded requests for materials to you, you may find it necessary to estimate the total number of intermediaries who will request materials on the basis of prior years’ experience. The number of sets of proxy materials requested by any single intermediary also may have to be estimated on the basis of past years’ requests. (See the example below.)

The purpose of requesting a “random” selection of intermediaries is to achieve a good mix of banks and brokers and to avoid a sample drawn only from the largest or the smallest, only from one geographic area, or a sample concentrated on any other basis. Please record the names of the intermediaries you select.

Probably the best method by which to achieve a random sample is to work from an alphabetic list and select every fourth intermediary. (Selection of every fourth intermediary will provide the requested 25 percent sample.) You may, however, choose another method if you find it more convenient. Please record your method of selection, however, so that we may be advised of it at a later date.

Example

Issuer X receives 2,500 questionnaires from the SEC. Last year issuer X received requests from 200 banks and brokers for more than one set of proxy materials. From these 200 banks and brokers, issuer X randomly selects 50 (25 percent of 200) to receive questionnaires along with proxy materials. Last year these 50 selected banks and brokers requested a total of 10,000 sets of proxy materials.

Along with the 2,500 questionnaires the issuer receives instructions to distribute 2,000 to intermediaries and 500 to individual shareholders. Issuer X should send to each of the 50 selected banks and brokers one questionnaire for every five requested sets of proxy materials. This one-to-five ratio is derived by dividing the number of questionnaires to be sent to the selected intermediaries by the estimated number (using last year’s 10,000 as an estimate) of sets of proxy materials requested by these selected intermediaries. In this example, we divide 2,000 by 10,000. Estimates should be checked against actual orders as they are received, if possible.

Suppose Bank A is one of the 50 selected intermediaries and that it requests 500 sets of proxy materials. Then Bank A should be sent 100 questionnaires (one questionnaire for every five sets).

(71)
FOR INDIVIDUAL

As with the selection of intermediaries, the selection of individual shareowners to receive questionnaires should be made on a random basis. Again, the purpose of randomization is to avoid concentrations which will bias the sample.

If an alphabetic list is readily available or can be compiled without too much difficulty, then we would recommend using such a list to achieve randomization. For example, if you have 5,000 individual shareowners who will be sent proxy materials and 500 questionnaires to distribute among them, then you could send a questionnaire to every tenth name on the list.

If you cannot work from an alphabetic list, then the same method could be applied to any other list as long as it is reasonable to assume that the resulting sample is not concentrated with any identifiable segment of the population (that is, the largest or smallest shareholders, shareholders from a particular area of the country, etc.).

4. FOR ASSISTANCE

If you have any questions or problems as to the proper sampling technique, please contact either James Burgess—or Jeff Davis—. Any other questions or problems should be directed to Robert J. Mistletoe.

Instructions to Brokers and Banks Regarding Distribution of Shareholder Questionnaires to Beneficial Owners of Securities on Behalf of the Securities and Exchange Commission

Pursuant to subsection 12(m) of the Securities Exchange Act of 1934 the Securities and Exchange Commission is conducting a study of the practices of recording the ownership of securities in other than the name of the beneficial owners.

The Commission requests your cooperation in the distribution of the enclosed questionnaires to shareholders in the manner described hereinafter. Specific questions or problems should be directed to the issuing company from which you have received these questionnaires.

Instructions

The enclosed shareholder questionnaires are to be included with the proxy materials of the issuing company sending you these questionnaires and sent to a random sample of beneficial owners of the issuing company. In order that the results of the survey will truly represent the universe of beneficial owners it is essential that the questionnaires are sent to the owners in a random manner. While it is not possible for the Commission to prescribe the exact sample methodology to be used by each bank or broker due to differences in record keeping, the examples discussed below should provide general guidelines on the methods to be used.

Example "A"

Intermediary "A" (either bank or broker) requests 2,000 sets of proxy materials from Issuer "X". Along with the 2,000 sets of proxy materials, Intermediary "A" receives 200 shareholder questionnaires. Intermediary "A" keeps its records of beneficial owners on a computer list which ranks all accounts by size of account. In order to insure that the questionnaires are distributed to a stratified sample of shareholders, Intermediary "A" encloses one questionnaire in every tenth (200÷2,000=1÷10) set of proxy material mailed.

Example "B"

Intermediary "B" also receives 200 questionnaires and 2,000 sets of proxy materials from Issuer "X". However, Intermediary "B" keeps its beneficial owner
records by type of account (institutional or retail) and by zip code. For the common stock of Issuer "X", Intermediary "B" has 200 beneficial owners which are classified as institutional accounts and 1,800 classified as retail accounts. Under this situation, Intermediary "B" would send 20 (one tenth of the 200) of the questionnaires to institutional accounts and 180 (one tenth of the 1,800) to retail accounts. As with the previous example Intermediary "B" would enclose one questionnaire to every tenth set of proxy materials mailed to insure that the questionnaires are distributed to each zip code in a manner representative of all the beneficial owners' addresses.

In brief, all intermediaries should attempt to randomize the distribution of the shareholder questionnaires in a manner which is the most practical and least burdensome in terms of the methods used to keep beneficial owner records. Because records will be kept on the number of shareholder questionnaires being sent, it is requested that every intermediary return any undistributed questionnaires to the issuing company.

**SECURITIES AND EXCHANGE COMMISSION,**

*Washington, D.C.*

Dear Shareholder: The Securities and Exchange Commission, the Federal agency which regulates and oversees the securities markets, is involved in a Congressionally mandated study concerning, among other things, the method by which proxy materials, annual reports and other shareholder information are distributed.

Through the voluntary survey set out on the reverse side, the Commission invites your participation in the study. The questions are intended to obtain your views on the effectiveness of communications between corporations and their shareholders and to assist the Commission in determining what measures are needed to improve those communications. We urge your thoughtful response and thank you for your participation in this survey. A postage paid envelope has been provided for return of the questionnaire.

In addition, if you wish, please feel free to submit any further comments or suggestions on a separate sheet of paper.

Sincerely,  

Roderick M. Hills, Chairman.

**REQUEST FOR SHAREHOLDER INFORMATION**

A. In what city and state do you reside?

<table>
<thead>
<tr>
<th>City</th>
<th>State</th>
<th>Zip code</th>
</tr>
</thead>
</table>

B. Are you an institution (including a trust or an estate) or an individual? (check one)

1. ( ) Institution
2. ( ) Individual

C. On what date did you receive the proxy material accompanying this questionnaire?

| mo. | day | year |

D. What company is the subject of the proxy material that you received with this questionnaire?

E. Was the proxy material accompanying this questionnaire forwarded to you by (check one):

1. ( ) the corporation whose shares you own?
2. ( ) a broker? (name)
3. ( ) a bank? (name)
4. ( ) other? (please specify)
F. If your securities are held by a broker or bank, would you object to having your broker or bank disclose your name and mailing address to the corporation whose shares you own, so that the corporation could communicate with you directly? (check one)
1. ( ) I would object to having my name and address disclosed.
2. ( ) I would not object to having my name and address disclosed.

G. Do the instructions accompanying this proxy material call for you to return the proxy card to (check one):
1. ( ) the corporation whose shares you own?
2. ( ) a broker?
3. ( ) a bank?
4. ( ) other (please specify)? ________________________________

H. How many shares does the enclosed proxy card entitle you to vote? ________________________________

I. Has it been your practice to vote shares which you own? (check one)
1. ( ) Always
2. ( ) Sometimes
3. ( ) Never

J. Do you have any complaints regarding the transmission of proxy materials, annual reports or other shareholder communications? Please be as specific as possible.

Questionnaire for Issuers

Securities and Exchange Commission Questionnaire for Issuers

General instructions

A. Except where otherwise indicated, the information requested in this questionnaire relates to the 1976 proxy season (March, April, May and June, 1976).

B. If your answer to any of the following questions requires information for which you do not have precise statistics, answer the question with your best estimate, and write "ESTIMATE" in the right hand margin next to your answer.

C. If there is insufficient room for any answer, please continue your answer on a separate sheet of paper and attach it to the completed questionnaire.

D. (1) As used in this questionnaire, the term "intermediary" means brokers, banks, and trust companies which hold securities in their name or in the name of a nominee for their own account or for the accounts of customers who are the beneficial owners of such securities.

(2) As used in this questionnaire, the term "ten day rule" refers to rules promulgated by registered national securities exchanges, which permit broker-dealers, under certain circumstances, to vote securities held in street or nominee name on behalf of customers. In general, these rules require that brokers vote only on certain non-controversial issues. For example, see New York Stock Exchange Rules 451 and 452.

E. Unless otherwise indicated, the term "proxy materials" as used in this questionnaire includes the proxy statement, annual report, and any other materials distributed by an issuer in connection with its annual meeting.
F. If you have difficulty in completing any of the questions or if any of the questions are unclear to you, please contact:

Issuer Questionnaire

Issuer's Name—
Address of Principal Place of Business—
City, State, and Zip Code—

1. (a) During the 1976 proxy season, proxy mailings to your voting common shareholders were undertaken by which of the following:
   (i) — Your corporation.
   (ii) — A bank transfer agent (Please identify.)
   (iii) — A non-bank transfer agent (Please identify.)
   (iv) — A proxy solicitation firm (Please identify.)
   (v) — Other (Please identify.)

   (b) If the mailing of proxy material to your voting common shareholders was undertaken by an entity other than your corporation, please indicate your reasons.
   (Check all applicable.)
   (i) — Less costly.
   (ii) — More efficient.
   (iii) — A greater shareholder vote.
   (iv) — Other (Please specify.)

2. (a) If you do not employ a proxy solicitation firm on a regular basis, have you employed such firms for particular purposes?
   — Yes. — No.
   (b) If "yes," under what circumstances did you employ such a firm, and what services did the firm perform for you?

3. (a) Briefly describe your classes of voting stock and indicate if each class is common or preferred.
   (b) What is the total number of recordholders for each class of your voting stock?
   (c) What is the total number of shares issued and outstanding for each class of your voting stock?

4. (a) What was the meeting date for this year's annual shareholders' meeting?
   Month—Day—
   (b) What was the record date for this year's annual shareholders' meeting?
   Month—Day—

5. How was the investment community informed of your record date? The information was transmitted to: (Check all applicable.)
   (a) — A national securities exchange(s). (Please specify.) — On what date?
   Month—Day—
   (b) — The National Association of Securities Dealers, Inc. Month—Day—
   (c) — A clearing corporation or depository. (Please specify.) Month—Day—
   (d) — A financial news service(s) or publishing service(s). (Please specify.) —
   Month—Day—
   (e) — Other. (Please specify.) — Month—Day—

6. As of your record date, how many of your recordholders of voting common stock were in the following groups of intermediaries?
   (a) Banks or trust companies—
   (b) Brokers—
   (c) Other institutional holders—

80-014—76—6
7. As of your record date, how many shares of your voting common stock were held of record by the following groups of intermediaries?
   (a) Banks or trust companies ——.
   (b) Brokers ——.
   (c) Other institutional investors ——.

8. How do you determine which recordholders are intermediaries to whom you send a search card?
   (a) During what period were your search cards mailed to intermediary recordholders? From: Month—— day—— to Month—— day——.
   (b) How many search cards did you mail?
   (c) How many search cards were returned?
   (d) How many intermediary recordholders requested proxy materials other than by returning your search card?
   (e) How many intermediary recordholders requested more than one set of proxy materials?
   (f) What was the total number of sets of proxy materials requested by intermediaries?
   (g) How many persons other than recordholders requested more than one set of proxy materials?
   (h) How many of the persons in category (f) above sought reimbursement for distributing proxy materials?

10. (a) How many broker intermediaries ordered proxy materials:
   (i) Before your mailing of search cards?
   (ii) Within 10 days after your mailing of search cards?
   (iii) 10 days to 21 days after your mailing?
   (iv) More than 21 days after your mailing?
   (b) How many bank and trust company intermediaries ordered proxy materials:
   (i) Before your mailing of search cards?
   (ii) Within 10 days after your mailing of search cards?
   (iii) 10 days to 21 days after your mailing?
   (iv) More than 21 days after your mailing?
   (c) How many institutional holders other than banks, trust companies and brokers ordered proxy materials:
   (i) Before your mailing of search cards?
   (ii) Within 10 days after your mailing of search cards?
   (iii) 10 days to 21 days after your mailing?
   (iv) More than 21 days after your mailing?

11. (a) If an intermediary does not promptly respond to your search card, do you contact the intermediary? —— Yes; —— No.
   (b) If "yes,"
   (i) Please describe your follow-up procedure.
   (ii) How many days after the mailing of the search card do you contact the intermediary?

12. (a) In your distribution of proxy materials to non-intermediaries do you mail annual reports and proxy materials together as a unit? —— Yes. —— No.
   (b) If "no" do you mail the annual reports by:
   —— First class mail?
   —— Third class bulk mail?
   —— Private distributor?
   —— Other? (Please specify.)
   (c) If "yes," how are the materials packaged?
   (d) If "yes," do you mail the proxy material and annual reports by:
   —— First class mail?
   —— Third class bulk mail?
   —— Private distributor?
   —— Other? (Please specify.)

13. In your mailings of proxy materials to intermediaries:
   (a) Do you:
   —— Mail proxy materials to intermediaries as soon as a request is received?
   or
   —— Accumulate a substantial number of requests before mailing proxy materials?
   (b)(f) Do you request the intermediary to distribute annual reports and proxy materials separately? —— Yes. —— No.
(ii) If "yes," to your knowledge, how do most intermediaries distribute the annual reports?

- First class mail
- Third class bulk mail
- Private distributor
- Other (Please specify).

Questions 14 through 17 call for information regarding the transmission of search cards and proxy materials to the intermediaries listed at the top of the answer columns.

14. Were your securities held of record by each intermediary as of record date?

15. On what date did you mail a search card to each intermediary?

16. (a) On what date was a request for proxy materials received from each intermediary?
(b) On what date were proxy materials sent to each intermediary?

17. How many sets of proxy materials were sent to each intermediary?

18. (a) What was the total number of sets of proxy materials sent to your intermediary recordholders in connection with this year's annual meeting?
(b) What was the total number of sets of proxy materials sent to your non-intermediary recordholders in connection with this year's annual meeting?

19. During what period were proxy materials sent to your non-intermediary recordholders? From: Month —— day —— To: Month —— day.

20. After proxy materials were first forwarded to your intermediary recordholders for distribution to your beneficial shareowners:
(a) How many of those intermediaries requested additional sets of materials?
(b) How many additional sets of materials were requested by those intermediaries?

21. What percentage of your total common voting shares issued and outstanding was voted at your annual meeting in:
(a) 1976? —— %; (b) 1975? —— %; (c) 1974? —— %; (d) 1973? —— %; (e) 1972? —— %.

22. (a) Did the proxy for the annual meeting in each of the following years contain all, some or no matters which could be voted on by a broker-intermediary recordholder pursuant to a "10-day rule" of a national securities exchange?
(i) 1976: All ---; some ---; none ---; don't know ---.
(ii) 1975: All ---; some ---; none ---; don't know ---.
(iii) 1974: All ---; some ---; none ---; don't know ---.
(iv) 1973: All ---; some ---; none ---; don't know.
(v) 1972: All ---; some ---; none ---; don't know ---.
(b) For each year’s annual meeting for which your answer in (a) above was “some,” please indicate:

(i) As to each matter which could be voted on by a broker-intermediary pursuant to a “10-day rule,” what percentage of your total shares issued and outstanding was voted in: 1976? ——. 1975? ——. 1974? ——. 1973? ——. 1972? ——.

23. How many complaints have you received since January 1, 1975, from your beneficial owners regarding the solicitation of proxies, the transmittal of proxy materials, or any other matters relating to issuer-shareholder communications?

Please describe in detail the nature of the complaints. If the number is large, indicate the general categories of complaints and the number of complaints in each category, and attach as an exhibit to the completed questionnaire copies of complaints which are representative of the general categories of complaints which you received.

24. (a)(i) Do you reimburse intermediaries for forwarding proxy materials and annual reports? —— Yes. —— No.
(ii) If “no,” please explain.
(b)(i) Do you reimburse intermediaries for forwarding quarterly reports? —— Yes. —— No.
(ii) If “no,” please explain.

25. (a) How many requests for reimbursement did you receive from intermediary recordholders for the forwarding of proxy materials to your beneficial owners in connection with this year’s annual meeting?
(b) Did you decline to pay any bills from intermediaries who sought reimbursement? (If so, please explain your reasons.)
(c) How many intermediaries who requested sets of materials did not seek reimbursement for forwarding such materials?

26. (a) Were you billed for the forwarding of annual reports or proxy materials in connection with this year’s annual meeting by any persons or entities who were not recordholders? —— yes. —— no.
(b) How many such bills did you receive?
(c) (i) Did you decline to pay any such bills? —— yes. —— no.
(ii) If “yes,” please explain your reasons.

27. (a) Please indicate the highest and lowest per unit charge billed by intermediary recordholders for forwarding this year’s proxy materials and the average per unit charge of all such billings:
(i) Where the proxy material and annual report were forwarded together as a unit. —— Highest. —— Lowest. —— Average.
(ii) Where the proxy material and annual report were forwarded separately. —— Highest. —— Lowest. —— Average.

(b) For the highest and lowest per unit charge in a(i) and a(ii) above, please attach as an exhibit to this questionnaire the bills seeking the highest and lowest per unit charge and indicate on those bills the number of sets of proxy materials sent to the intermediaries who sought the highest and lowest per unit charge.
(c) (i) How many bills received from intermediary recordholders were itemized to show the cost of postage (or shipment if done otherwise than through the postal service). —— Bills.
(ii) With respect to those bills, please indicate the highest and lowest per unit charge and the average per unit charge for postage (or shipment if done otherwise than through the postal service). Please attach copies of the bills which sought the highest and lowest per unit charge for postage or shipment and indicate on those bills the number of sets of proxy materials sent to intermediaries who sought the highest and lowest per unit charge. —— Highest. —— Lowest. —— Average.

28. (a) (i) What was your average per unit postage or shipping cost of sending annual reports and proxy materials to non-intermediary recordholders this year?

1 In answering this question do not restrict your answer to the number of shares voted by brokers pursuant to a 10-day rule but rather answer with the total vote, whether by brokers or other recordholders entitled to vote.
(ii) What was your average per unit postage or shipping cost of sending annual reports and proxy materials to intermediary recordholders this year (that is, excluding charges by intermediaries for forwarding the materials to beneficial shareholders of your securities)?

(b) (i) Exclusive of design, printing, and materials costs, what was the total cost and total per unit cost of packaging, handling and sending annual reports and proxy materials to non-intermediary recordholders this year? Include a brief explanation of what costs were included in your computation, and how such costs were allocated. — Total cost. — Total per unit cost.

(ii) Exclusive of design, printing, and materials costs, what was the total cost and total per unit cost of packaging, handling, and sending annual reports and proxy materials to your beneficial shareholders through intermediary recordholders this year? Include a brief explanation of what costs were included in your computation, and how such costs were allocated. — Total cost. — Total per unit cost.

(iii) Do the figures given in (b)(i) and (b)(ii) above include the following costs incurred in packaging, addressing and otherwise preparing the annual reports and proxy materials for mailing or shipment? If so, please indicate the amount of each of these costs for the mailing or shipment of annual reports and proxy materials to intermediaries and non-intermediaries this year.

(a) Mailing costs: Intermediary——; nonintermediary——.
(b) Other direct costs (including wages and salaries): Intermediary——; nonintermediary——.
(c) Depreciation of machinery: Intermediary——; nonintermediary——.
(d) Overhead cost of building: Intermediary——; nonintermediary——.
(e) Other overhead costs: (Please specify.) Intermediary——; nonintermediary——.

29. In your experience, does the current system of transmitting issuer communications to beneficial owners through intermediaries operate satisfactorily for the transmission of proxy statements and annual reports? (Please explain your answer.)

30. In your experience, does the current system of transmitting issuer communications to beneficial owners through intermediaries operate satisfactorily for the transmission of quarterly reports? (Please explain your answer.)

31. In your experience, does the current system of transmitting issuer communications to beneficial owners through intermediaries operate satisfactorily for the transmission of other routine shareholder communications? (Please explain your answer.)

32. In your experience, does the current system of transmitting issuer communications to beneficial owners through intermediaries operate satisfactorily in the event of a tender offer or a counter-solicitation of proxies? (Please explain your answer.)

33. What problems, if any, would you encounter if brokers were unable to vote securities pursuant to a 10 day rule? (Please explain your answer.)

34. In your experience, has the issuer-shareholder communications system been affected favorably or adversely by the interposition of securities depositories? (Please explain your answer.)

35. What steps do you believe should be taken to improve the current system of transmitting proxy materials through intermediaries? (Please explain your answer.)

36. (a) In your experience, does the current system of transmitting proxy material through intermediaries entail costs which should be reduced or eliminated? (Please explain your answer.)

(b) If so, please indicate the nature of these costs and how they might be reduced or eliminated.

37. (a) Do you believe the costs of the current system of transmitting proxy material through intermediaries should be reallocated among issuers, intermediaries and beneficial owners? (Please explain your answer.)

(b) If so, please indicate which costs should be reallocated, the reasons for the reallocation and the method of reallocation.

38. Instead of issuers sending search cards to intermediaries, do you believe intermediaries should be required to take the initiative in contacting issuers regarding the number of sets of proxy materials needed? (Please explain your answer.)

39. (a) Do you believe that under certain circumstances the identities of beneficial owners should be disclosed to issuers?

(b)(i) If so, under what circumstances should this information be disclosed?
(ii) Should this disclosure be extended to all beneficial owners or only to certain categories? (Please explain your answer.)

(iii) What steps should be taken to effect the disclosure of beneficial ownership that you believe appropriate? (Please explain your answer.)

(iv)(a) Should the identity of beneficial owners be disclosed to other issuers? (b) If so, to whom should this information be made available?

(v) If the identities of beneficial owners are disclosed, what steps, if any, should be taken to protect the privacy of such beneficial owners?

(vi) If you had access to the names and addresses of all shareowners both beneficial and of record, would you modify either the frequency of your communications with shareowners or the types of communications? If so, what changes would you make?

40. Please provide the name of the person in your organization with overall responsibility for your proxy department. Name——. Mailing Address——. Phone Number——.

Exhibits

41. Please attach a sample of the search card which you sent to intermediaries.

42. (a) Please enclose a copy of your annual report, proxy materials and all other materials sent to your non-intermediary shareholders in connection with this year's annual meeting, packaged as they were sent, if possible.

(b) Please attach a copy of any materials, instructions, or other communications sent to intermediary recordholders (other than SEC questionnaires).

43. Please attach a copy of the invoice for the forwarding of proxy materials received from each of the intermediaries listed in Questions 14-17.

44. During this year's proxy season, at the request of the Commission, you distributed questionnaires to a selected number of your shareholders who held directly in their own name and to a number of intermediaries who represented beneficial owners of your securities. On a separate sheet of paper, please describe the method used to distribute the questionnaires. In particular, please provide the following information:

(a) How did you determine which intermediaries were to receive questionnaires?

(b) To what intermediaries were questionnaires sent and how many questionnaires were sent to each intermediary?

(c) How did you determine which of your shareholders holding directly in their own name were to receive questionnaires?

(d) How were the questionnaires packaged for distribution to individual shareholders of record. For example, were the questionnaires included with your proxy materials or sent with the annual report; was the questionnaire attached to the annual report or included loose in an envelope?

Questionnaire for Brokers

Securities and Exchange Commission Questionnaire

General Instructions

1. Except where otherwise indicated, the information requested on this questionnaire relates to the 1976 proxy season. (March, April, May and June, 1976).

2. Questions which discuss your proxy forwarding procedures relate to the procedures used to forward proxy materials to customers who are entitled to exercise voting rights with respect to securities held in nominee or street name.

3. As used in this questionnaire, "nominee name" refers to arrangements used by institutional investors (e.g., banks or trust companies) for the registration of securities held by them for their own account or for the accounts of their customers who are the beneficial owners of the securities. "Street name" refers to a specialized type of nominee name registration whereby a broker registers in its name, or in the name of its nominee, securities left with it by its customers or held by it for its own account.

4. If your answer to any question requires information for which you do not have precise statistics, answer the question with your best estimate, and write "ESTIMATE" in the right hand margin next to your answer.

5. If there is insufficient room for any answer, please continue your answer on a separate sheet and attach it to the completed questionnaire.

6. Unless otherwise indicated, the term "proxy materials" as used in this questionnaire includes an issuer's proxy statement, annual report, and any other materials forwarded by an issuer in connection with its annual meeting.
7. If you experience difficulty in completing any of the questions or if any of the questions are unclear, please contact:

Questionnaire for Brokers

Broker's Name——.
Address of Principal Place of Business——.
City, State, and Zip Code——.
1. Who forwards issuers' proxy materials to your customers?
   i. ( ) Yourself.
   ii. ( ) A subsidiary (Please specify name of entity).
   iii. ( ) An independent contractor (Please specify name of entity).
   iv. ( ) Other (Please specify name of entity).
2. In what city(ies) and state(s) are your proxy forwarding functions performed?
3. Which of the following issuer-shareholder communications do you forward as a matter of course to your customers? (Check all applicable answers.)
   i. ( ) All materials (If you check this answer, please do not check any other responses).
   ii. ( ) Proxy materials.
   iii. ( ) Annual reports.
   iv. ( ) Quarterly reports:
      v. Information regarding mergers, tender offers, and reorganizations.
   vi. ( ) Press releases.
4. If you do not forward all issuer-shareholder communications, what is your basis for deciding what material to withhold and what material to forward to your customers?
5. If a customer provides instructions that proxy materials and other communications are not to be forwarded, do you comply with such instructions?
   i. ( ) Yes.   ii. ( ) No.   iii. ( ) Sometimes (Please explain).
6. How do you become aware of issuers' record dates and annual meeting dates? (Check all applicable answers.)
   i. ( ) Bulletins of the stock exchanges (Please specify.)
   ii. ( ) Bulletins from clearing corporations or depositories (Please specify.)
   iii. ( ) Commercial bulletin services (Please specify).
   iv. ( ) Search cards from issuers.
   v. ( ) Other (Please specify.)
7. In order to obtain annual reports and proxy materials to send to your customers,
   i. ( ) do you request proxy materials from the issuer without waiting to receive a search card? or
   ii. ( ) do you want until the issuer sends you a search card to request proxy materials?
8. If you normally wait until issuers send you search cards, is there some period after which you request proxy materials from those from whom no search card has been received?
   i. ( ) Yes. (Please describe your procedure)    ii. ( ) No.
9. In forwarding issuers' proxy materials to customers for whom you hold securities in nominee and street name:
   i. ( ) Do you send unsigned proxy cards to your customers and instruct them to return the cards to you? or
   ii. ( ) Do you sign and send proxy cards to your customers and ask them to return the cards directly to the issuer? or
   iii. ( ) Do you use another procedure? (Please describe.)
10. Do you seek reimbursement from issuers for forwarding proxy materials?
    i. ( ) Yes.   ii. ( ) No.   iii. ( ) Varies (Please explain).
11. (a) Do you have written policies and procedures regarding the transmission of issuer-shareholder communications to your customers?
   i. ( ) Yes.   ii. ( ) No.
   (b) If so, please attach a copy of such policies and procedures as an exhibit to the completed questionnaire.

12. On what date does your fiscal year end?

13. On May 28, 1976, how many customer accounts did you have which held voting securities in nominee or street name?
   i. ( ) Less than 50.   ii. ( ) 50 to 250.   iii. ( ) 251 to 1,000.   iv. ( ) 1,001 to 5,000.   v. ( ) 5,001 to 25,000.   vi. ( ) 25,001 to 100,000.   vii. ( ) Over 100,000.

14. How many issues were represented in your nominee or street name holdings of voting securities as of May 28, 1976?
   i. ( ) Less than 100.   ii. ( ) 101 to 500.   iii. ( ) 501 to 1,500.   iv. ( ) 1,501 to 8,000.   v. ( ) Over 8,000.

15. (a) Do you ever order proxy materials from an issuer before the record date?
   i. ( ) Yes.   ii. ( ) No.
   (b) If you order proxy materials before an issuer's record date, how do you determine how many sets of materials to order?

16. What percentage of issuers whose issues you hold in nominee or street name, sent search cards to you inquiring whether you represent beneficial owners of their securities?
   i. ( ) More than 95%.   ii. ( ) 75% to 95%.   iii. ( ) 50% to 74%.   iv. ( ) Less than 50%.

17. What percentage of issuers failed to send proxy materials to you after you notified them that you represented beneficial owners of their securities and ordered proxy materials?
   i. ( ) Less than 5%.   ii. ( ) 5% to 10%.   iii. ( ) 11% to 25%.   iv. ( ) More than 25%.

18. Of those issuers who did send you sets of proxy materials, what percentage sent the materials so that you received them:
   a. Less than 5 days before their annual meeting? ——%.
   b. 5 to 10 days before their annual meeting? ——%.
   c. 11 to 15 days before their annual meeting? ——%.
   d. 16 to 25 days before their annual meeting? ——%.
   e. More than 25 days before their annual meeting? ——%.
   f. After their annual meeting? ——%.

19. (a) Did you find it necessary to request additional proxy materials from an issuer after your initial request for proxy materials for your beneficial shareholders was filled? i. ( ) Yes.   ii. ( ) No.
   (b) If you found it necessary to request additional proxy materials from an issuer, why was the additional order necessary (e.g., order improperly filled the first time, customer purchases before record date, etc.)?
   (c) If you found it necessary to request additional proxy materials, what percentage of issuers filled your orders for additional proxy materials properly and in a timely manner?
   i. ( ) More than 95%.   ii. ( ) 75% to 95%.   iii. ( ) 50% to 74%.   iv. ( ) less than 50%.

20. Please indicate on a per unit basis the reimbursement you sought for the items below and the basis (e.g., "100% of postage costs," "guidelines of NYSE," "cost plus 5%," etc.) for determining reimbursement sought. The matter of what unit basis you use in responding to this question is left for your definition; use whatever unit basis you find manageable in responding. However, describe in the space provided the unit that you have used (e.g., "per ounce," "per mailing," "per 100 envelopes," etc.).
   If you did not seek reimbursement for any item listed, please write "Not Sought" where applicable. Each item requires a response; if an item is not applicable, please write "N/A" and state the reason.
   (a) Service fee:
      i. $—— per ——— (Define unit.)———.
      ii. Basis for seeking reimbursement:
   (b) Postage:
      i. $—— per ——— (Define unit.)———.
      ii. Basis for seeking reimbursement:
(c) Envelopes for mailing proxy materials to your customers:
   i. $— per — (Define unit.) —.
   ii. Basis for seeking reimbursement:

(d) Return Postage:
   i. $— per — (Define unit.) —.
   ii. Basis for seeking reimbursement:

(e) Envelopes for return of proxies from customers:
   i. $— per — (Define unit.) —.
   ii. Basis for seeking reimbursement:

(f) Other (Please specify): 
   i. $— per — (Define unit.) —.
   ii. Basis for seeking reimbursement:

21. (a) How many complaints related to the area of issuer-shareholder communications did you receive in the last 12 months?
   (b) Please describe in detail the nature of the complaints. If the number is large, indicate the general categories of complaints and the number of complaints in each category, and attach as an exhibit to the completed questionnaire copies of complaints which are representative of the general categories of complaints which you received.

22. What was the total number of sets of proxy materials that you mailed during your last fiscal year?

23. What were the gross costs allocated to the following items in your proxy operations during your last fiscal year?
   a. Mailing costs $—.
   b. Other direct costs (including wages and salaries) $—.
   c. Depreciation cost of machinery $—.
   d. Overhead cost of the building $—.
   e. Other overhead cost $—. (Please specify.)

24. For your last fiscal year, what was the percentage of your expenditures listed in question 23 allocated to proxy operations during March, April, May and June?
   a. Mailing costs —%.
   b. Other direct costs (including wages and salaries) —%.
   c. Depreciation cost of machinery —%.
   d. Overhead cost of the building —%.
   e. Other overhead cost —% (Please specify.)

25. During your last fiscal year, what was the total reimbursement you received from issuers for your proxy operations? $—.

26. During your last fiscal year, what was the total amount of fees which you received from customers for administrative and bookkeeping services relating to maintaining securities in nominee or street name accounts? (Please attach as an exhibit to the completed questionnaire a copy of your schedule of fees for such services.) $—.

27. (a) How many employees, including supervisory personnel, work in your proxy department on a full-time, year-round basis?
   (b) How many additional employees, including supervisory personnel, worked in your proxy department during all or most of this year's proxy season (March, April, May and June)? Full-time —. Part-time —.
   (c) How many work hours (i.e., the total number of hours worked, whether by part-time or full-time, supervisory or non-supervisory personnel) were devoted to your proxy operations in this year's proxy season (March, April, May and June)? — hours.
   (d) How many employees, including supervisory personnel, worked in your proxy department during all or most of last year's proxy season (March, April, May and June 1973)? Full-time —. Part-time —.
   (e) How many work hours (i.e., the total number of hours worked, whether by part-time or full-time, supervisory or non-supervisory personnel) were devoted to your proxy operations in last year's proxy season (March, April, May and June 1973)? — hours.
   (f) How many hours are in your normal work day? — hours.

Questions 28 through 34 call for information regarding the transmission of specific issuers' proxy material to customers for whom you hold voting securities in nominee and street name. If you did not hold any securities of an enumerated issuer in nominee or street name during the 1976 proxy season (March through June), so indicate by using the designation "N/A" for the answer to question 28 and leave blank the answer spaces for questions 29 through 34.
### 28(a). What was the number of accounts with record date positions in the voting common stock of each issuer?

(b). What was your total record date position in customer accounts in the voting common stock of each issuer?

#### 29(a). For how many of the accounts in question 28(a) were voting instructions received this year?

#### 29(b). What percentage of each position in question 29(a) was voted this year pursuant to voting instructions received from customers?

30. Of those accounts set out in question 29, how many accounts held:

(a) less than 100 shares?

(b) 101 to 500 shares?

(c) 501 to 2,000 shares?

(d) more than 2,000 shares?

31. On what date did you receive a search card from each issuer?

32. On what date did you request proxy materials from each issuer?

33. On what date did you receive proxy materials from each issuer?

34. After receipt of proxy materials, on what date did you forward the proxy materials to your customers?

35. Do you have any accounts for which you hold a power of attorney entitling you to vote the securities contained in such accounts?

   If your customers do not send their voting preferences to you or to your agent for tabulation and forwarding to the issuer, omit questions 36 and 37.

36. (a) Do you as a matter of course establish a time prior to an issuer's annual meeting after which voting preferences received from your customers are not voted? i. ( ) Yes. ii. ( ) No.

   (b) If you have such a policy, briefly describe it:

   (c) If you have such a policy, is it communicated to your customers? i. ( ) Yes. ii. ( ) No.

37. (a) If your customers fail to exercise their voting rights, do you vote their shares pursuant to, and to the extent permitted by, the rules of a self-regulatory organization? i. ( ) Yes. ii. ( ) No.

   (b) If "yes," do you as a matter of course vote your entire position for management? i. ( ) Yes. ii. ( ) No.

   (c) If you do not vote your entire position for management, under what circumstances do you vote against management?
38. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of proxy statements and annual reports? (Please explain your answer)

39. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of quarterly reports? (Please explain your answer)

40. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of other routine shareholder communications? (Please explain your answer)

41. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of a tender offer or a counter-solicitation of proxies? (Please explain your answer)

42. What problems, if any, would occur if brokers were unable to vote securities pursuant to a 10 day rule of a national securities exchange? (Please explain your answer)

43. In your experience, has the current issuer-shareholder communications system been affected favorably or adversely by the interposition of securities depositories? (Please explain your answer)

44. What steps do you believe can or should be taken to improve the current system of transmitting proxies through intermediaries? (Please explain your answer)

45. (a) In your experience, does the current system of transmitting proxies through intermediaries entail costs which should be reduced or eliminated?

(b) If so, please indicate the nature of these costs and how they might be reduced or eliminated.

46. (a) Do you believe the costs of the current system of transmitting proxy material through intermediaries should be reallocated among issuers, brokers, and beneficial shareowners?

(b) If so, please indicate which costs should be reallocated, the reasons for the reallocation and the method of reallocation.

47. Instead of issuers sending search cards to brokers, do you believe brokers should be required to take the initiative in contacting issuers regarding the number of sets of proxy materials needed? (Please explain your answer)

48. (a) Do you believe that under certain circumstances the identities of your customers who hold securities in street or nominee name or such customers of other brokers should be disclosed to issuers? (Please explain your answer)

(b)(i) If so, under what circumstances should this information be disclosed? (Please explain your answer)

(ii) Should this disclosure be extended to all beneficial owners or only to certain categories? (Please explain your answer)

(iii) What steps should be taken to effect the disclosure of beneficial ownership that you believe appropriate? (Please explain your answer)

(c)(i) Should the identity of beneficial owners be disclosed to other than issuers? (Please explain your answer)

(ii) If so, to whom should this information be available? (Please explain your answer)

(d) If the identities of beneficial owners are disclosed, what steps if any, should be taken to protect the privacy of such beneficial shareowners?

49. (a) Have you read the Securities and Exchange Commission's Preliminary Report to Congress on nominee and street name ownership of securities? i. ( ) Yes. ii. ( ) No.

(b) If so, please indicate any comments which you have.

(c) If not, would you like to receive a copy of the Preliminary Report? i. ( ) Yes. ii. ( ) No.

50. Please provide the name of the person in your organization to contact for further information concerning your responses to this questionnaire. Name ———. Title ———. Address ———. Telephone Number ———.

Exhibits

I. Please attach a copy of your written policies and procedures, if any, regarding the transmission of issuer-shareholder communications to your customers.

II. Please attach copies of complaints representative of the categories given in response to question 21.

III. Please attach a copy of your schedule of fees for administrative and bookkeeping services relating to maintaining securities in nominee and street name accounts.
Questionnaire for Banks

Securities and Exchange Commission Questionnaire

General Instructions

1. Except where otherwise indicated, the information requested on this questionnaire relates to the 1976 proxy season (March, April, May and June, 1976).
2. The questions relate to procedures used to forward proxy materials to customers whose securities are held in nominee name.
3. As used in this questionnaire, "nominee name" registration refers to the arrangement whereby a bank registers securities held pursuant to a custodial or trust arrangement in its name or the name of its nominee.
4. If there is insufficient room for any answer, please continue your answer on a separate sheet and attach it to the completed questionnaire.
5. If an answer to any of the following questions requires information for which you do not have precise statistics, answer the question with your best estimate and write "ESTIMATE" in the right hand margin next to your answer.
6. Unless otherwise indicated, the term "proxy materials" as used in this questionnaire includes the proxy statement, annual report, and any other materials forwarded by an issuer in connection with its annual meeting.
7. If you experience difficulty in completing any of the questions or if any of the questions are unclear, please contact:
   Robert J. Millstone
   Senior Special Counsel
   Securities and Exchange Commission
   500 North Capitol Street
   Washington, D.C. 20549

Le Manh Tri
Branch Chief
Directorate of Economic and Policy Research
Securities and Exchange Commission
500 North Capitol Street
Washington, D.C. 20549

Approved by GAO, B-180231 (S76020), Expires 12-31-76.

Questionnaire

Name ———. Address of Principal Place of Business ———. City, State, and Zip Code ———.

1. Who forwards issuers' proxy materials to your customers?
   i. ( ) Yourself
   ii. ( ) A subsidiary (Please specify name of entity.) ———
   iii. ( ) An independent contractor (Please specify name of entity.) ———
   iv. ( ) Other (Please specify name of entity.) ———

2. In what city(ies) and state(s) are your proxy forwarding functions performed?
   i. ( ) All materials (If you check this answer, please do not check any other response).
   ii. ( ) Proxy materials.
   iii. ( ) Annual reports.
   iv. ( ) Quarterly reports.
   v. ( ) Information regarding mergers, tender offers, and reorganizations.
   vi. ( ) Press releases.

4. If you do not forward all issuer-shareholder communications, what is your basis for deciding what material to withhold and what material to forward to your customers?

5. If a customer provides instructions that proxy materials and other communications are not to be forwarded, do you comply with such instructions?
   i. ( ) Yes.  ii. ( ) No.  iii. ( ) Sometimes (Please explain).

6. How do you become aware of issuers' annual meeting dates? (Check all applicable answers.)
   i. ( ) Bulletins of the stock exchanges (Please specify).
   ii. ( ) Bulletins from clearing corporations or depositories (Please specify).
   iii. ( ) Commercial bulletin services. (Please specify.)
   iv. ( ) Search cards from issuers.
   v. ( ) Other (Please specify).
7. In order to obtain annual reports and proxy materials to send to your customers,
   i. ( ) do you request proxy materials from the issuer without waiting to receive a search card? or
   ii. ( ) do you wait until the issuer sends you a search card to request proxy materials?

8. If you normally wait until issuers send you search cards, is there some period after which you request proxy materials from those from whom no search card has been received? i. ( ) Yes. (Please describe your procedure.) ii. ( ) No.

9. In forwarding issuers' proxy materials to customers for whom you hold securities in nominee name:
   i. ( ) Do you send unsigned proxy cards to your customers and instruct them to return the cards to you? or
   ii. ( ) Do you sign and send proxy cards to your customers and ask them to return the cards directly to the issuer? or
   iii. ( ) Do you use another procedure? (Please describe.)

10. Do you seek reimbursement from issuers for forwarding proxy materials?
    i. ( ) Yes. ii. ( ) No. iii. ( ) Varies (Please explain).

11. (a) Do you forward proxy materials to all custodial customers for whom the bank holds, in nominee name, securities for which the bank does not have voting discretion? i. ( ) Yes. ii. ( ) No.
    (b) Do you forward proxy materials to all custodial customers for whom the bank holds, in nominee name, securities for which the bank has voting discretion? i. ( ) Yes. ii. ( ) No.
    (c) Do you forward proxy materials to co-trustees where the bank has sole voting discretion for securities held in nominee name in trust accounts? i. ( ) Yes. ii. ( ) No.
    (d) Do you forward proxy materials to co-trustees where the bank has shared voting discretion for securities held in nominee name in trust accounts? i. ( ) Yes. ii. ( ) No.

12. (a) Do you have written policies and procedures regarding the transmission of issuer-shareholder communications to your customers? i. ( ) Yes. ii. ( ) No.
    (b) If so, please attach a copy of such policies and procedures as an exhibit to the completed questionnaire.

13. On what date does your fiscal year end? Month ——— Day ———.

14. On May 28, 1976, how many trust and custodial accounts do you have holding voting securities in nominee name?

<table>
<thead>
<tr>
<th>Trust accounts</th>
<th>Custodial accounts</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Less than 50</td>
<td></td>
</tr>
<tr>
<td>ii. 50 to 250</td>

<tr>
<td>v. More than 8,000</td>
<td></td>
</tr>
</tbody>
</table>

16. What percentage of issuers, whose issues you hold in nominee name, sent search cards to you inquiring whether you represent beneficial owners of their securities? i. ( ) more than 95%. ii. ( ) 75 to 95%. iii. ( ) 50 to 74%. iv. ( ) less than 50%.
17. What percentage of issuers failed to send proxy materials to you after you notified them that you represented beneficial owners of their securities and ordered proxy materials? i. ( ) less than 5%. ii. ( ) 5% to 10%. iii. ( ) 11% to 25%. iv. ( ) more than 25%.

18. Of those issuers who did send you sets of proxy materials, what percentage sent the materials so that you received them:
   a. Less than 5 days before their annual meeting? ———%.
   b. 5 to 10 days before their annual meeting? ———%.
   c. 11 to 15 days before their annual meeting? ———%.
   d. 16 to 25 days before their annual meeting? ———%.
   e. More than 25 days before their annual meeting? ———%.
   f. After their annual meeting? ———%.

19. (a) Did you find it necessary to request additional proxy materials from an issuer after your initial request for proxy materials for your beneficial shareowners was filled? i. ( ) Yes. ii. ( ) No.

   (b) If you found it necessary to request additional proxy materials from an issuer after receiving an initial shipment, why were additional orders necessary (e.g., order improperly filled the first time, customer purchases before record date, etc.)?

   (c) If you found it necessary to request additional proxy materials, what percentage of issuers filled your order for additional proxy materials properly and in a timely manner?

      i. ( ) more than 95%.
      ii. ( ) 75% to 94%.
      iii. ( ) 50% to 74%.
      iv. ( ) less than 50%.

20. Please indicate on a per unit basis the reimbursement you sought for the items listed below and the basis (e.g., "100% of postage costs," "cost plus 5%," etc.) for determining reimbursement sought. The matter of what unit basis you use in responding to this question is left for your definition; use whatever unit basis you find manageable in responding. However, describe in the space provided the unit that you have used (e.g., "per ounce," "per mailing," "per 100 envelopes," etc.).

   If you did not seek reimbursement for any item listed, please write "Not Sought" where applicable. Each item requires a response; if an item is not applicable, please write "N/A" and state the reason.

   (a) Service fee:
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

   (b) Postage:
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

   (c) Envelopes for mailing proxy materials to your customers:
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

   (d) Return Postage:
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

   (e) Envelopes for return of proxies from customers:
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

   (f) Other (Please specify.):
      i. $____ per ____ (Define unit.).____.
      ii. Basis for seeking reimbursement:

21. (a) How many complaints related to the area of issuer-shareholder communications did you receive in the last 12 months?

   (b) Please describe in detail the nature of the complaints. If the number is large, indicate the general categories of complaints and the number of complaints in each category and attach as an exhibit to the completed questionnaire copies of complaints which are representative of the general categories of complaints you received.

22. What was the total number of sets of proxy materials that you mailed in your last fiscal year?
23. What were the gross costs allocated to the following items in your proxy operations during your last fiscal year?

a. Mailing costs $____.
b. Other direct costs (including wages and salaries) $____.
c. Depreciation cost of machinery $____.
d. Overhead cost of the building $____.
e. Other overhead cost $____ (Please specify.)

24. For your last fiscal year, what percentage of your expenditures listed in question 23 was allocated to proxy operations during March, April, May and June?

a. Mailing costs ______%.
b. Other direct costs (including wages and salaries) ______%.
c. Depreciation cost of machinery ______%.
d. Overhead cost of the building ______%.
e. Other overhead costs ______% (Please specify.)

25. During your last fiscal year, what was the total reimbursement you received from issuers for your proxy operations? $____.

26. During your last fiscal year, what was the total amount of fees which you received from customers for administrative and bookkeeping services relating to maintaining securities in nominee or street name accounts? (Please attach as an exhibit to the completed questionnaire a copy of your schedule of fees for such services.) $____.

27. (a) How many employees, including supervisory personnel, work in your proxy department on a full-time, year-round basis?

(b) How many additional employees, including supervisory personnel, worked in your proxy department during all or most of this year's proxy season (March, April, May and June, 1976)? Full-time ______. Part-time ______.

(c) How many work hours (i.e., the total number of hours worked, whether by part-time or full-time, supervisory or non-supervisory personnel) were devoted to your proxy operations in this year's proxy season (March, April, May and June)? ______ hours.

(d) How many employees, including supervisory personnel, worked in your proxy department during all of most of last year's proxy season (March, April, May and June 1975)? Full-time ______. Part-time ______.

(e) How many work hours (i.e., the total number of hours worked, whether by part-time or full-time, supervisory or non-supervisory personnel) were devoted to your proxy operations in last year's proxy season (March, April, May and June 1975)? ______ hours.

(f) How many hours are in your normal work day? ______ hours.
Questions 28 through 34 call for information regarding the transmission of specific issuers' proxy material to custodial customers for which you held voting securities in nominee name and to those persons who share or have sole voting discretion for securities held in nominee name in trust accounts. If you did not hold any securities of an enumerated issuer in nominee name during the 1976 proxy season (March through June), so indicate by using the designation "N/A" rather than by leaving the answer space blank ("-")

deotes custodial accounts and "t" denotes trust accounts.

**THE ISSUERS TO WHICH QUESTIONS 28-34 RELATE ARE THOSE AT THE RIGHT.**

28. What was the number of accounts with record date positions in the voting common stock of each issuer? [Diagram]

29. What was your total record date position in the voting common stock of each issuer? [Diagram]

30. Of those accounts set out in question 28, how many accounts held:

   (a) less than 100 shares?
   (b) 101 to 500 shares?
   (c) 501 to 2,000 shares?
   (d) more than 2,000 shares?

31. On what date did you receive a search card from each issuer? [Diagram]

32. On what date did you request proxy materials from each issuer? [Diagram]

33. On what date did you receive proxy materials from each issuer? [Diagram]

34. After receipt of proxy materials, on what date did you forward the proxy materials to your customers? [Diagram]

If your custodial customers do not send their voting preferences to you or to your agent for tabulation and forwarding to the issuer, omit question 35.

35. (a) Do you as a matter of course establish a time prior to an issuer's annual meeting after which voting preferences received from your customers are not voted? i. ( ) Yes. ii. ( ) No.

   (b) If you have such a policy, briefly describe it:

   (c) If you have such a policy, is it communicated to your customers? i. ( ) Yes. ii. ( ) No.

36. (a) Do you ever vote custodial shares without customer instructions? i. ( ) Yes. Please explain under what circumstances:

   i. ( ) Yes. ii. ( ) No.

   (b) If "yes," do you as a matter of course cast for management all the shares you vote? i. ( ) Yes. ii. ( ) No.

   (c) If you do not cast for management all the shares you vote, under what circumstances do you vote against management?

37. (a) When you possess sole voting discretion on behalf of trust accounts, do you vote the shares held in the trust account? i. ( ) Yes. ii. ( ) No.

   (b) If "yes," do you, as a matter of course, cast for management all the shares your vote? i. ( ) Yes. ii. ( ) No.
(c) If you do not cast for management all the shares you vote, under what circumstances do you vote against management?

38. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of proxy statements and annual reports? (Please explain your answer.)

39. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of quarterly reports? (Please explain your answer.)

40. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of other routine shareholder communications? (Please explain your answer.)

41. In your experience, does the current system of transmitting issuer-shareholder communications through intermediaries operate satisfactorily for the transmission of a tender offer or a counter-solicitation of proxies? (Please explain your answer.)

42. In your experience, has the current issuer-shareholder communications system been affected favorably or adversely by the interposition of securities depositories? (Please explain your answer.)

43. What steps do you believe can or should be taken to improve the current system of transmitting proxies through intermediaries? (Please explain your answer.)

44. (a) In your experience, does the current system of transmitting proxies through intermediaries entail costs which should be reduced or eliminated?

(b) If so, please indicate the nature of these costs and how they might be reduced or eliminated.

45. (a) Do you believe the costs of the current system of transmitting proxy material through banks should be reallocated among issuers, banks and beneficial shareowners?

(b) If so, please indicate which costs should be reallocated, the reasons for the reallocation and the method of reallocation.

46. Instead of issuers sending search cards to banks, do you believe banks should be required to take the initiative in contacting issuers regarding the number of sets of proxy materials needed? (Please explain your answer.)

47. (a) Do you believe that under certain circumstances the identities of your customers whose securities are held in nominee name or such customers of other intermediaries should be disclosed to issuers? (Please explain your answer.)

(b) (i) If so, under what circumstances should this information be disclosed? (Please explain your answer.)

(ii) Should this disclosure be extended to all beneficial owners or only to certain categories? (Please explain your answer.)

(iii) What steps should be taken to effect the disclosure of beneficial ownership that you believe appropriate? (Please explain your answer.)

(c) (i) Should the identity of beneficial owners be disclosed to persons other than issuers? (Please explain your answer.)

(ii) If so, to whom should this information be available? (Please explain your answer.)

(d) If the identities of beneficial owners are disclosed, what steps, if any, should be taken to protect the privacy of such beneficial shareowners?

48. (a) Have you read the Securities and Exchange Commission's Preliminary Report to Congress on nominee and street name ownership of securities? i. ( ) Yes. ii. ( ) No.

(b) If so, please indicate any comments which you have.

(c) If not, would you like to receive a copy of the Preliminary Report? i. ( ) Yes. ii. ( ) No.

49. Please provide the name of the person in your organization to contact for further information concerning your responses in this questionnaire. Name ———. Title ———. Address ———. Telephone Number ———.

Exhibits

I. Please attach a copy of your standard trust agreement. II. Please attach a copy of your standard custodial agreement.

III. Please attach a copy of your written policies and procedures, if any, regarding the transmission of issuer-shareholder communications to your customers.

IV. Please attach copies of complaints representative of the categories given in response to question 22.

V. Please attach a copy of your schedule of fees for administrative and bookkeeping services relating to maintaining securities in nominee accounts.

80-014—76——7
APPENDIX D

SAMPLING METHODOLOGY, 1976 PROXY SEASON SURVEY

It was determined that specific data needed to study the practice of recording the ownership of securities in street or nominee name would best be obtained through a survey of the experiences of shareowners, issuers, brokers and banks during the 1976 proxy season. Therefore, four questionnaires were designed to solicit information from those groups. The task of drawing samples of banks, brokers, and issuers that would be adequately representative of the populations and provide a basis for valid conclusions was initiated by developing appropriate lists from which to select the samples. The lists from which the samples were drawn were stratified by variables related to the issues in the Study.

BANK QUESTIONNAIRE

The information for selecting the sample of banks was derived from source data compiled by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency. The sample was stratified by size of trust department assets.

Table 1 is the population table for the bank sample which shows the number of insured commercial banks, the value of their total trust department assets at the end of 1974, and the total assets in personal trusts and estates of these banks. The percentages in this table indicate that about 66 percent of the trust assets are held by 1.5 percent of the population.

In selecting a sample of banks, the goal was to survey banks which potentially would have a large percentage of shares in nominee name, and it was therefore decided to survey a disproportionate share of larger banks. An attempt was made, however, to obtain a reasonable sample of smaller banks in order to determine if the size of the bank affected any of the results.

The adequacy of the selected sample of banks is reflected in Table 2. The 149 responding banks accounted for 36.8 percent of trust assets and 32.8 percent of personal trust and estate assets of the population.

BROKER-DEALER QUESTIONNAIRE

The population of brokers for this study was all brokers that were required to file Form X-17A-20 with the Commission in 1975, which are those with gross revenues of more than $500,000 in 1973 or 1974.

The NYSE member brokers were drawn from a sub-population composed of 218 full-clearing member firms carrying customer accounts. For purposes of stratification, the number of customer accounts carried by each broker was utilized. As with the sample of banks, a greater proportion of larger brokers was selected in order to obtain the maximum coverage of broker proxy operations. Non-NYSE member brokers were selected on the same basis as NYSE member firms.

The adequacy of the coverage of the selected sample of brokers is reflected in the response of 118 brokers shown in Table 4. The 87 responding NYSE brokers have 87.3 percent of the customer accounts of all NYSE members. The 31 non-NYSE brokers reported 37.5 percent of their sub-population’s customer accounts.

*See Table 3.*
For the non-homogeneous population of issuers, a sample stratified by the number of common shares outstanding was expected to yield a more reliable indication of proxy operations than a random sample of issuers. The source for compiling data for the population and sample of issuers was Standard & Poor's Investor Statistical Laboratory (ISL) which provided data for 2,500 corporations listed on the NYSE or Amex. The NASD was the source for the data on issuers whose securities are unlisted and quoted on NASDAQ. Included among the 159 respondents are 127 NYSE and Amex listed corporations and 32 companies quoted on NASDAQ. The 32 NASDAQ companies, which were selected by using a random number table, account for a total of 163 thousand recordholders and 199 million common shares outstanding. The common shares of the 127 reporting NYSE and Amex issuers account for eleven percent of the common shares listed on the two exchanges.

The adequacy of the sample is supported by the stratification variables. For example, when the 127 listed issuers are compared with the population, it can be seen that the sample captured 25 percent of the issuers with over 100 million listed shares and 36 percent of the common shares outstanding. Among the sub-population of issuers with 70-100 million shares outstanding, the sample captured 12 percent of the issuers and eleven percent of the common shares outstanding. While the sample captured a lesser percentage of the common shares outstanding in the lower range of the common share-size classes, it nevertheless captured a reasonable proportion of the issuers in these classes for analysis of the effects of issuer size on proxy operations (see Table 5).

**SHAREOWNER QUESTIONNAIRE**

The distribution of questionnaires to shareowners was accomplished by routing the questionnaires through participating issuers who distributed them in conjunction with the distribution of their annual reports and proxies. Ninety-seven issuers were asked to distribute shareowner questionnaires and 95 actually distributed them. The issuers were provided with a quantity of shareowner questionnaires proportional to the number of their recordholders. Along with the questionnaires the issuers received instructions as to the method of allocating their supply both to a sample of their intermediary recordholders and to a sample of their individual shareholders. (The instructions are reproduced in Appendix C.) Those intermediaries which received a supply of questionnaires from issuers were also given instructions (reproduced in Appendix C) as to the method of selecting a sample of shareowners to receive questionnaires. About 100,000 questionnaires were distributed and almost 26,000 shareowners responded. Approximately 2,000 questionnaires were not used for statistical purposes due to insufficient data.

4 It would have been preferable to stratify the sample by the number of recordholders, but this information was not available in a machine-readable format. On the basis of the sample of reporting issuers, the correlation coefficient between the number of recordholders and shares outstanding was .975, indicating that shares outstanding was virtually as good a stratification variable as the number of recordholders.

5 NASDAQ is an acronym for the NASD Automated Quotations System.

Note: Included in these numbers are only issuers whose common stock was clearly indicated as having full voting authority.

Source: Standard and Poor's Investor Statistical Laboratory, Office of Securities Industry and Self-Regulatory Economics, Directorate of Economic and Policy Research.

In general, the selection of individual shareowners was made on a systematic sampling basis, as opposed to a random sampling basis. For example, if an issuer or intermediary had 5,000 individual shareowners who would receive proxy materials and 500 questionnaires to distribute among them, the issuer or intermediary was asked to send a questionnaire to every tenth name on an alphabetical list of shareowners. The same sampling method was to be applied to any other type of listing as long as the resulting sample did not create a concentration of shareowners associated with any identifiable segment of the population, such as the smallest or largest shareowners or shareowners from a particular region of the country.

**Control procedures**

Each of the bank, broker and issuer samples was divided into two sub-samples. One sub-sample of each group received advance notice of the survey in order to obtain their cooperation and to advise them generally as to what data would be requested. The other sub-sample of each group was designed to serve as a control group. These “non-notified” sub-samples were composed of the same number of entities as the “notified” sub-samples, and their members were selected so as to mirror as nearly as practicable the distributions represented by the notified sub-samples. There were no major differences in the response rates between the notified and the non-notified sub-samples. Of the responding banks, 46 percent were non-notified; 52 percent of the responding brokers were non-notified; and 43 percent of the responding issuers were non-notified. With regard to the timeliness of transmittal of shareowner communications, there were no significant statistical differences in the responses of the notified and non-notified sub-samples.

APPENDIX II

MANUAL FOR PROXY SOLICITATION OF STOCK IN BROKERS' NAMES

INTRODUCTION

The purpose of this Manual is to promote the use of standard forms and practices in order to facilitate solution of the problems arising in the handling of proxy solicitations, create better financial public relations, and realize a maximum representation of shares in brokers' and other nominee names at meetings of stockholders.

I. PUBLICITY

Immediate newspaper publicity should be given to the calling of a meeting of stockholders for the purpose of acting upon any matter affecting in any way the rights or privileges of stockholders or any other matter not of routine nature. Such publicity should, of course, describe the matter to be acted upon. It is recommended that a minimum of thirty days be allowed between the record date and the meeting date so as to give ample time for the solicitation of proxies.

II. NOTICE TO EXCHANGES OR NASD RE: STOCKHOLDER MEETINGS OR CONSENTS

A. Stockholder meetings.—The Exchanges or the NASD should be given prompt notice, in writing, of the calling of any meeting of stockholders. Such notice should be received by the Exchanges or the NASD not later than the tenth calendar day prior to the date of record (or the closing of the transfer books) for determination of stockholders entitled to vote at the meeting. Such notice should indicate the date of the meeting, the date of record for determination of stockholders entitled to vote, and describe the matters to be voted upon at the meeting.

If the transfer books are to be closed in lieu of the taking of a record of stockholders, the notice shall state the date of reopening of the books as well as the date of their closing.

B. Consents.—Should a corporation desire to utilize consents in lieu of holding a special meeting of stockholders, the Exchanges require the following criteria to be observed:

1. A record date must be used.
2. "Consent" material must be sent to all shareholders.
3. Corporate action is not to be taken until the solicitation period has expired, even if the required vote is received earlier.
4. A 30-day solicitation period is recommended and a minimum of 20 days required.
5. "Consent" material should conform to normal proxy statement disclosure standards.

It must be remembered that the exchanges require a corporation to hold an annual meeting. Should consents be utilized instead of a special meeting, they may only be used with prior approval of the exchanges.

(104)
III. NOTIFICATION TO BROKERS

The standard forms recommended in this Manual have been designed to—

A. Be readily recognized as proxy solicitation material
B. Be easily understood by proxy departments of brokerage firms.

"RECOGNITION" of material relating to proxy solicitation is important. Thus, it is urged that the color BLUE be used for all suggested forms. The use of standard forms will insure that proxy material will be processed more expeditiously.

IV. RECORD DATE

Brokers should be notified of meetings as far in advance of the record date as possible. Ten days should be deemed an absolute minimum, although longer notice is desirable. (Notifying the brokers of a record date does not relieve the corporations of any responsibility they may have for also notifying the respective Exchanges or the NASD.)

Brokers should be notified of this record date by the use of a search form which also serves to provide a method for brokerage firms to order proxy material and annual reports. (See Exhibits A and B)

Also a summarization of an amendment (December 1974) to SEC Rule 14a-3 and 14e-7 of the Securities Exchange Act of 1934 follows for your information: "... if an issuer knows certain of its securities are held of record by a broker, dealer, bank, voting trustee, or their nominees, the issuer must inquire as to whether such record holder is holding on behalf of one or more beneficial owners and, if so, the number of copies of the proxy and proxy soliciting materials (or of the information statement) and, in the case of the annual meeting at which directors are to be elected, the number of copies of the annual report to security holders necessary to supply such material to the beneficial owners. The issuer must then furnish such record holders with an appropriate number of copies assembled in such a form, and at such a place as each such record holder may reasonably request, and must pay the reasonable expenses of each such record holder, if so requested, for mailing such material to the beneficial owners."

DESCRIPTION OF SEARCH FORM

(See Exhibits A and B in back of booklet. These can be used as a sample for your printer.)

It is recommended that corporations use a blue double postal card (perforated to facilitate separation by broker) approximately 6½ " x 8½ " for each half. The oversized card lends itself to instant identification as proxy material. The double card should meet the needs of most corporations and brokers in connection with ordering proxy material and in advising brokers about the timetable. The information thus received will enable delivery of proxy soliciting material to brokers in adequate time. Of course, the wording of the suggested forms will not fit all situations. For example, some corporations may have nonvoting stock, whereas others will have all classes of stock entitled to vote, similarly, in some cases, a bank or proxy soliciting firm will furnish the proxy material, whereas in others, the Secretary's office or the printer may do so. The wording has been drafted to cover most cases but obviously may need revision in order to meet a specific situation, e.g., if a corporation plans a second mailing, it should be so stated, together with the proposed date of mailing.

Under "Delivery of Material to Brokers", please show under "Scheduled Date" your best estimate of the dates you expect to deliver the material. In order to comply with Securities and Exchange Commission and the Exchanges' rules, it is necessary for the corporation to furnish to the broker, for distribution to clients who are beneficial owners, all of the proxy material that the corporation is sending to stockholders, including the proxy and annual report. The columns headed "Date Received" and "Date Mailed" are for the use of the brokers.

The information to be shown under "Shares Entitled to Vote" is to be furnished by the corporation, following the record date.

Mailing instructions must be complete. Brokers must know whether the annual report is to be mailed with the proxy material or whether it is to be mailed separately; also how the annual report and the proxy material are to be mailed (First Class or Third Class). Also, furnish as much advance information as possible about "follow-up mailings".
The name and phone number of an individual designated by the corporation must be listed for inquiries concerning requests for additional proxy material, annual reports, etc. This information is essential where a corporation uses the facilities of a bank for soliciting proxy material, the corporation must furnish on the "search card" the name and telephone number of the individual at the bank in charge of the solicitation of proxies.

Some corporations do not accept telegraphic proxies. If so, please indicate. However, if they are acceptable, list the proper address for their receipt.

Further, if the voting of foreign holdings may be of importance to a corporation, the corporation should give consideration to making a statement to brokers as to how the material should be sent to foreign holders, such as by airmail or regular mail.

The other part of the double card would be for the use of the broker to indicate its soliciting requirements. (Brokers have expressed concern that during a busy proxy season clerical omissions may occur. Therefore, particularly when important blocks of stock are involved, it may be advisable to maintain a procedure whereby a telephone call is made at or about the record date to any broker from whom a response has not then been received, to make absolutely sure of his requirements.)

A booklet, List of Brokers and Banks (with names of proxy contacts), has been distributed. It lists names and telephone numbers of proxy contacts at brokerage firms and certain banks. It is available from any of the sponsoring firms listed on the last page of this publication.

V. NOTIFYING BROKERS OF SHARES OF RECORD

As soon as the record has been taken and stockholder accounts are posted, it is important to send each broker a notice (Exhibit C) of the number of shares registered in its name at the close of business on the record date. This assists the broker in checking its records because stock may be put on loan or assigned to another firm. By knowing how many shares of stock are registered in its name, the broker can make a more accurate tally and give a maximum vote.

VI. DELIVERY OF MATERIAL TO BROKERS

Packages of annual reports, proxy statements, proxies, etc. should be plainly labeled to indicate they contain proxy material and are for inside delivery. In addition, the label should show the name of the corporation and the meeting date. This will assist the broker in locating material and alert the broker to the time available for soliciting.

Proxy material should not be assembled prior to distribution to the broker. Envelopes should be the right size to hold the proxy soliciting material to be sent to the brokers' clients.

It is very important, to facilitate prompt handling by brokers, that delivery of annual reports and proxy soliciting material to brokers occur on the same day, and the supplementary or additional material and follow-up material should be identified as such.

The suggested form of label is set forth as Exhibit D. The color should be blue. The preferred minimum size is 5/8" x 6 1/4".

Soliciting material should be delivered to brokers as early as possible to ensure its mailing to clients at the same time the corporation makes its direct mailing to stockholders. It cannot be too strongly stressed that the timely delivery of proxy soliciting material to brokers is of prime importance.

VII. BILLING PROCEDURES

Invoices from brokers must set forth individually the number of sets of proxy soliciting material forwarded by the broker to its clients, the service fee incident thereto, the postage expense, and total charge. Also, the name of the brokerage firm and its membership, i.e., AMEX, NYSE, NASD, etc. must be set forth on the bill itself (See Exhibit E). It is recommended that bills from brokers not be paid until these items of information are specifically furnished.

The following are the rates of reimbursement of member-brokerage organizations for all out-of-pocket expenses, including reasonable clerical expenses, incurred in connection with proxy solicitations and in mailing interim reports or other material pursuant to the rules of the Exchanges:
50 cents for each set of proxy material for those meetings that do not include a proposal which requires beneficial owner instructions, plus postage, with a minimum of $3.00 for all sets mailed;

60 cents for each set of proxy material for those meetings which include a proposal requiring beneficial owner instructions, plus postage, with a minimum of $3.00 for all sets mailed;

10 cents for each copy, plus postage, for interim reports or other material with no minimum.

The National Association of Security Dealers, Inc. has also adopted these rates of reimbursement.

Member-brokerage organizations are required to mail out such material as provided by the Rules when satisfactory assurance is received of reimbursement of expenses at such rates; provided, however, that a member organization may request reimbursement of expenses at lower rates than those mentioned above or, if agreed to by the person soliciting proxies or the company at higher rates. Follow up mailings shall be at the rate of 10 cents per set. A charge for envelopes may be made only if envelopes are not furnished by the person soliciting proxies or distributing material. The 60 cent rate will apply for proxy material covering those meetings which include one or more proposals requiring beneficial owner instructions.

VIII. DEPOSITORY TRUST COMPANY (CEDE & CO.) “OMNIBUS PROXY PROCEDURE”

This procedure is designed to remove the Depository completely from the communication link between issuer and Depository Participant. In essence, the procedure entails the reassignment of Cede voting rights to its Participants through the execution of an “Omnibus Proxy” which is mailed to the issuing company.

Briefly stated, as of the record date for a stockholders’ meeting, DTC will produce a Dividend/Proxy Take-Off listing which identifies the Participants to the accounts of which shares are credited and designates the number of shares credited to each account. The listing is machine-printed and attached to an Omnibus Proxy which assigns the voting rights to the Participant’s name therein for the amounts shown, and authorizes these Participants to vote the issues in their firm or corporate name. In addition, each Participant having shares of the relevant security credited to its account receives a Proxy Record Date Notice advising it of the delivery of the Omnibus Proxy and listing to the issuer and the number of shares it is entitled to vote. Thus, the Participants named on the listing may obtain proxy cards, appropriately complete and execute them and return them directly to the issuer.

In the event that subsequent adjustments are necessary in order to accurately reflect a Participant’s position a corrected Omnibus Proxy and listing will be produced and forwarded to the issuer. Each Participant whose account is affected by such adjustment is advised of its new record date position by means of a corrected Proxy Record Date Notice. Identical procedures will be followed in the event of adjournments which result in a new record date.

The complete Omnibus Proxy procedure may be obtained by contacting Val Stevens (212) 623-2096, The Depository Trust Company, 55 Water St., New York, NY 10041.

MISCELLANEOUS

1. To assist brokers and their clients in analyzing proposals and voting, the numbering of the proposals in the notice of meeting, proxy statement, and on the proxy must be coordinated by number or other designation. For example, if a proposal is numbered “1” in the notice of meeting and proxy statement, then it is important that the same proposal be numbered “1” on the proxy form; and similarly where a proposal is designated as “A”, “B”, etc.

2. The Exchanges require at least four complete sets of definitive proxy material as soon as possible after material has been cleared by the Securities and Exchange Commission. Proxy material for OTC issues should be sent to the NASD in the same manner.

3. As a part of normal brokerage transactions, stock is often delivered back and forth between stock exchange firms without having the change of ownership recorded on stock transfer books. A request by the Exchanges that members
transfer such shares into their own names prior to the record date may make proxy solicitation more effective. (For further information consult with the respective Exchanges.)

4. On request, the Exchanges will advise the corporation whether a particular matter appears to be "controversial" within the meaning of their rules concerning voting of stock by members. (For a detailed explanation of the procedure, consult the appropriate section of the "Company Guide" of The American Stock Exchange and the "Company Manual" for The New York Stock Exchange.) To obtain early consideration, it is suggested that a copy of the proxy material in preliminary form be submitted to the Exchanges for review. Any proxy statement with a proposal(s) other than the election of directors and selection of auditors should be sent to the Exchanges in preliminary form.

5. When a broker may vote without instructions under the Exchanges' rules, it may give a proxy at its discretion no earlier than ten days before the meeting provided the proxy soliciting material is mailed to beneficial owners at least 15 days before the meeting. Corporations should keep these instructions in mind to forestall needlessly contacting brokers before they legally can execute the firm's proxy.

6. Upon receipt of definitive proxy material, the Exchanges show an appropriate symbol in their "Meetings Section" of their Weekly Bulletin to guide members in the voting of proxies. Prompt delivery to the Exchanges of the definitive proxy material will permit publication of this information in time to be of most benefit to Exchange members.

7. Payment of bills from brokers should be made as promptly as possible and should be accomplished within 90 days following receipt.

In conclusion

Those responsible for drafting this Manual have leaned heavily on the experience and practice of those brokers and corporations whose procedures have appeared to work satisfactorily. In some cases, adoption of certain of the suggested procedures may require changes in what has become established practice. It is the hope of those responsible for developing this Manual that all corporations will conform their soliciting practice to that suggested. Ideas for improved procedures will be welcome and may be forwarded to any of the sponsoring organizations.

SURVEY OF THE AMERICAN SOCIETY OF CORPORATE SECRETARIES

AMERICAN SOCIETY OF CORPORATE SECRETARIES, INC.,

Mr. Robert J. Millstone,
Senior Special Counsel, Division of Market Regulation, Securities and Exchange Commission, Washington, D.C.

Dear Mr. Millstone: On behalf of the Joint Subcommittee on Street Name Study Questionnaire of the Securities Law Committee and the Securities Industry Committee of the Society, I am pleased to furnish to you herewith the following materials concerning the results of the questionnaire which the Society circulated among its members soliciting comments with respect to the alternatives contained in the Commission’s Preliminary Report of December 4, 1975:

(a) A Report of the Joint Subcommittee containing each of the questions contained in the questionnaire and summaries of the responses thereto, including an analysis of the written comments received in response to certain of the questions;

(b) a copy of the questionnaire, the letter forwarding it, and the attachment thereto setting forth the alternatives;

(c) a copy of all the written comments received in response to certain of the questions;

(d) the raw data, including print-out sheets, covering the responses; and

(e) the summaries of the responses prepared by the Society dated May 5th and May 11th.

If you have any questions concerning the enclosures, please do not hesitate to contact me care of J. C. Penney Company, Inc., 1301 Ave. of the Americas, New York, N.Y. 10019, telephone: (212) 937-4881.

I would appreciate your receipting for this letter and the other enclosures on the enclosed copy of this letter.

Very truly yours,

J. D. Silvers,
Chairman of the Subcommittee.

Enclosure.

AMERICAN SOCIETY OF CORPORATE SECRETARIES, INC.,

Dear Member: As you probably know, on December 4, 1975, the Securities and Exchange Commission issued to Congress its Preliminary Report pursuant to Subsection 12(m) of the Securities Exchange Act of 1934, which authorized and directed the Commission to undertake a study and investigation of the practice of recording the ownership of securities in other than the name of the beneficial owner. In his letter forwarding the Preliminary Report to Congress, Commission Chairman Hills stated that the Commission intended to continue to gather data on the subject and will present its final conclusions and recommendations to Congress by June 4, 1976.

Following the issuance of the Preliminary Report, the Society suggested to the SEC Commissioners that the Society poll its members with a questionnaire which would solicit the views of the members with respect to the various alternatives (including the present system) which are summarized in the Commission’s Preliminary Report (and discussed more fully below). The Commissioners reacted enthusiastically and expressed the hope that the Society would share the results with the Commission so that it will have the benefit of those views in preparing its final conclusions and recommendations.

Accordingly, attached to this letter is a Street Name Study Questionnaire, which we request that you complete and return to us at your earliest convenience. The Society is attempting to take a more active role on major issues and problems
of this type that are being studied by the SEC and Congress. To do this effectively, we need the assistance and support of each member of the Society. Therefore, we urge you to respond promptly to this important Questionnaire. Action in this area by Congress and the SEC can affect every issuer in the country.

Questions 1 through 4 of the Questionnaire are intended to solicit your views of the various alternatives and certain information concerning your company's own practices and experience regarding securities registration. Questions 5 through 12 are intended to solicit your views as to particular concerns which we perceive regarding the various alternatives; your views on those subjects should, in our opinion, be of particular interest to the Commission in preparing its final report. Accordingly, we would like to receive your responses to all the questions contained in the Questionnaire, if possible. Even if, however, you do not consider yourself to be in a position to answer some of the questions at this time, please, in any event, answer as many of the questions as you can, so that we may provide to the Commission as much of a sampling as possible of the views of the Society's members on the matters covered by the Questionnaire. In completing the Questionnaire your responses should to the extent practicable reflect your understanding of the views of your company's management.

The alternatives contained in the Commissioners' Preliminary Report are set forth on pages 23 through 29 of the Report, and a copy of those pages is attached to facilitate your response to the Questionnaire. You will note that the alternatives were proposed to the Commission by members of the securities industry or by commentators for consideration as a result of the dependency of the industry on nominee arrangements. While the Report states the alternatives as totaling four in number, you will note that there is actually a total of seven alternatives (the first three and second two such alternatives being grouped by the Commission under the headings "1. Variations in Registration or Disclosure" and "2. Centralized Communications," respectively), entitled in the Report as follows:

A. Registration of Securities in the Name of the Beneficial Owner.
B. Disclosure of Beneficial Ownership to Issuers.
C. Multiple Name Registration.
D. The Central Mailing Concept.
E. Centralized Order Processing for Proxy and Other Materials.
F. The Transfer Agent Depository Concept.
G. Retention of the Present System.

In the Questionnaire, the letters referring to the various alternatives correspond in each case to those set forth above.

Please return the completed Questionnaire to the Society by April 17, 1976, so that we may tabulate the results and furnish them to the Commission in time for its use. We expect to advise the members of the Society of the results of the Questionnaire in due course.

We thank you in advance for your efforts in completing the Questionnaire.

Sincerely,

J. DAVID SILVERS,
Chairman,

EUGENE J. T. FLANAGAN,
JOHN H. GRADY,
MATTHEW F. KANE.

AMERICAN SOCIETY OF CORPORATE SECRETARIES

STREET NAME STUDY QUESTIONNAIRE

(Reminder: Letters "A" through "G," when used to refer to particular alternatives, are keyed to the list contained in the covering letter and in Question 2 below.)

1. (a) During the past twelve months, has your company generally received from its stockholders many, few, or an average number of complaints under the present system? Many ☐ Few ☐ Average ☐
(b) Approximately how many stockholders of record does your company have? __________.
(c) Does your company maintain its own stockholder records? Yes ☐ No ☐
(d) Does your company act as its own transfer agent? Yes ☐ No ☐
(e) What percentage of your voting common stock is held in street or nominee (banks and brokers) name? ___% ☐

(Your Company Name)

Please answer the following questions concerning your company’s practices and experience:

2. Using a system of numbers (1—most favored to 7—most opposed), please rank the seven alternatives proposed by the Securities and Exchange Commission, as identified in the attached letter, and to the left below, in accordance with the order of your preference. (Please do not rank two proposals equally.)

A. Registration of Securities in the Name of the Beneficial Owner. ________
B. Disclosure of Beneficial Ownership to Issuers. ________
C. Multiple Name Registration. ________
D. The Central Mailing Concept. ________
E. Centralized Order Processing for Proxy and Other Materials. ________
F. The Transfer Agent Depository Concept. ________
G. Retention of the Present System. ________

3. Please describe below any clarifications or changes which you consider desirable, and any suggestions or problems which you wish to note, with respect to one or more of the alternatives, identifying the particular alternative which you are addressing in each case (Attach a rider if necessary).

4. Please describe below any additional alternative or alternatives which you believe that the Commission should consider (Attach a rider if necessary).

5. How would your company view any system for the registration of securities which would involve their registration in the names of their beneficial owners (see alternatives A and C), or disclosure to the issuer of all beneficial ownerships (see alternative B), particularly in the light of existing and future legal requirements for their public disclosure? Favorably □ Unfavorably □

6. Specifically, would your company be willing to bear the cost of establishing and maintaining the additional registration records or lists which would be required under alternatives A, B, and C? Yes □ No □

7. As you know, the continued use of stock and other certificates has been under study by various interested groups for some time. Advantages of their elimination would include improved clearance and transfer and reduced company costs, and its disadvantages would include loss of the evidentiary benefits of certificates for various purposes. How would your company view any system which would probably involve the elimination of the use of stock and other certificates, as would probably be the case under alternatives A, C, and F? Favorably □ Unfavorably □

8. Would your company be willing under any circumstances to bear a proportionate share of the following costs of the systems involved in each of the following alternatives (bearing in mind that under one or more of the systems there may be a saving in costs over a period of time)?
   a. Cost incurred by banks and brokers under alternative B Yes □ No □
   b. Cost of the central mailing system under alternative D Yes □ No □
   c. Cost incurred by depositories under alternative E Yes □ No □
   d. Cost of maintaining the transfer agent depository concept, including a message-switching center, under alternative F Yes □ No □

9. Should the definition of “beneficial ownership” for the purposes of any of the proposed alternatives or any other alternative which may be proposed for improved issuer-shareholder communications be clearly restricted to the right to vote the respective securities (as distinguished from, for example, the right to exercise investment discretion or to receive economic benefits)? Yes □ No □

10. Should any proposed alternative expressly assure protection to companies against liabilities which might arise from the acts or omissions of central mailing depositories, centralized ordering depositories, transfer agent depositories, or the like, including, for example, any challenge to the validity of a stockholder’s meeting or of any stockholder vote? Yes □ No □

11. Should any proposed alternative include adequate assurance that no disclosure of beneficial ownership will be required thereunder which might involve any violation of a beneficial owner’s right or privacy or which might otherwise involve violation of any other legal requirement that the information be kept confidential? Yes □ No □

12. May we cite your company as a respondent to this questionnaire when its results are published? Yes □ No □

Date Member

REPORT OF THE SECURITIES LAW COMMITTEE AND SECURITIES INDUSTRY COMMITTEE JOINT SUBCOMMITTEE ON STREET NAME STUDY QUESTIONNAIRE

(By J. David Silvers, Chairman, Eugene J. T. Flanagan, John H. Grady, Matthew F. Kane)

From mid-March to mid-April 1976, the American Society of Corporate Secretaries, Inc. ("Society"), through its Securities Law Committee and Securities Industry Committee Joint Subcommittee on Street Name Study Questionnaire ("Subcommittee"), conducted a poll of the membership of the Society to ascertain the views of the members on the alternatives summarized by the Securities and Exchange Commission ("Commission") in its Preliminary Report, dated December 4, 1975, pursuant to Subsection 12(m) of the Securities Exchange Act of 1934, on the practice of recording the ownership of securities in other than the name of the beneficial owner. The questionnaire, which was formulated by the Subcommittee and circulated among the Society's membership, was designed to solicit the members' views of the various alternatives and information concerning their own companies' experience, as well as their views as to particular concerns which the Subcommittee perceived to be of substantial importance. A copy of the questionnaire, the letter forwarding it, and the attachment thereto, all as circulated, are appended to this report.

Responses were received from 422 of the Society's members, and many of the responses contained specific comments concerning some or all of the alternatives. These responses were tabulated, and a summary thereof, including a summary of the comments, follows. In some cases, companies did not respond to all questions; these are indicated as "No answer."

**Question 1(a):** During the past twelve months, has your company generally received from its stockholders many, few, or an average number of complaints under the present system?

Response: Many—6 (1.4%); Few—351 (83.2%); Average—49 (11.6%); no answer—16 (3.8%).

**Question 1(b):** Approximately how many stockholders of record does your company have?

Response: Under 5,000—122 (29%); 5,000—10,000—72 (17%); 10,000—20,000—72 (17%); 20,001—50,000—67 (16%); 50,001—100,000—38 (9%); Over 100,000—34 (8%); No Answer—17 (4%).

**Question 1(c):** Does your company maintain its own stockholder records?

Response: Yes—114 (27%); No—303 (71.8%); No answer—5 (1.2%)

**Question 1(d):** Does your company act as its own transfer agent?

Response: Yes—64 (15.2%); No—355 (84.1%); No Answer—3 (0.7%).

**Question 1(e):** What percentage of your voting common stock is held in street or nominee (banks and brokers) name?

Response: Under 10%—25 (6%); 10%—19%—38 (9%); 20%—29%—76 (18%); 30%—39%—76 (18%); 40%—49%—68 (16%); 50%—59%—59 (14%); 60%—85%—42 (10%); Over 85%—0 (0%); No Answer—38 (9%).
Question 2: Using a system of numbers (1-most favored to 7-most opposed), please rank the seven alternatives proposed by the Securities and Exchange Commission, as identified in the attached letter, and to the left below, in accordance with the order of your preference. (Please do not rank two proposals equally.)

Response: Alternative A, Registration of Securities in the name of Beneficial Owner, received the following responses:

Alternative B, Disclosure of Beneficial Ownership to Issuers, received the following responses:

Alternative C, Multiple Name Registration, received the following responses:

Alternative D, The Central Mailing Concept, received the following responses:

Alternative E, Centralized Order Processing for Proxy and Other Materials, received the following responses:

Alternative F, The Transfer Agent Depository Concept, received the following responses:

Alternative G, Retention of the Present System, received the following responses:

The alternatives rank in the order of the mean response as follows: Alternative B—2.81; Alternative G—3.0; Alternative F—3.70; Alternative A—3.71; Alternative E—4.54; Alternative C—4.58; Alternative D—4.76.

The alternatives rank in the order of the median response as follows: Alternative B—2.34; Alternative G—2.41; Alternative A—3.21; Alternative F—3.76; Alternative C—4.81; Alternative E—4.86; Alternative D—4.91.

The alternatives rank in the order of the mode response as follows: Alternative G—134 (#1); Alternative A—90 (#1); Alternative B—125 (#2); Alternative D—91 (#4); Alternative F—76 (#4); Alternative C—93 (#5); Alternative E—110 (#6).

Question 3: Please describe below any clarifications or changes which you consider desirable, and any suggestions or problems which you wish to note, with respect to one or more of the alternatives, identifying the particular alternative which you are addressing in each case.

Question 4: Please describe below any additional alternative or alternatives which you believe that the Commission should consider.

Response: Copies of the responses to questions 3 and 4 are attached as an appendix to this report. Set forth below, however, is a overview of the more frequent comments.

Perceptive in the comments received was the belief that, with some minor modifications or stricter enforcement, the present system should be retained.
Similarly pervasive was the belief that the issuer should have a right to know who are the beneficial owners of its stock and that regardless of the system adopted, disclosure of beneficial owners of a company’s stock must be required. Many companies pointed out that the problem was not with the system, but rather that brokers and other nominees did not promptly forward materials including quarterly and annual reports, proxies, and 1099 information, to the beneficial owners. Many also noted that use of street names and nominees was important not only to provide anonymity to those who desire it, but also to facilitate the trading of stock. A number of companies pointed out that some means for providing certificates for those holders who wished them should be available.

With regard to alternative A, many companies cited the greatly increased costs for recordkeeping and certificates as a result of the increased need for transfers. However, many companies also noted that this was the most practical and useful manner in which a company could get to know who were the beneficial owners of its stock. A number of companies, however, noted that this alternative should provide a means to allow those holders who so wished to retain the anonymity available under the present system. This alternative, a number of companies noted, would only be successful if the use of the present form of certificate was largely eliminated or at least a computer card was substituted.

With regard to alternative B, many companies stressed the need for the information to be presented to them in an easily used form, compatible with their existing systems. Many also pointed out that regular updating (more frequently than quarterly) should be required and that no company should be held responsible for the accuracy of the data submitted to it. Some companies suggested that disclosure under this alternative could be limited to those beneficial owners who held in excess of a certain percent, and that the list of beneficial owners should be required to be maintained separate from the stockholders’ list to protect the beneficial owner from disclosure. Many companies felt that the costs of implementing this system would not be commensurate with the benefits to be gained.

With regard to alternative C, many companies noted that multiple name registration was too complex, would greatly increase costs, and would create many difficulties in reconciling records.

With regard to alternative D, many companies pointed out that this alternative would most likely increase the delay inherently involved in mailings which are not made directly by the issuer. In addition, many companies pointed out that companies and brokers were better equipped, and had sufficient trained personnel, to handle the mailings.

Many companies believed that the added costs would not be commensurate with the benefits to be gained by the system.

With regard to alternative E, many companies commented that this alternative was more costly than the present system and would not produce better results.

With regard to alternative F, a number of companies supported this alternative in theory and believed that it would have long range benefits largely due to the elimination of most stock certificates, however, some companies were concerned that the added costs were excessive, especially for the message switching center, and that it would not result in achieving the goal of enhancing issuer-shareholder communication.

With regard to alternative G, many companies believed that the problems with the present system were not sufficient to warrant change and that most, if not all problems, could be solved with better enforcement of the present rules.

Question 5: How would your company view any system for the registration of securities which would involve their registration in the names of their beneficial owners (see alternatives A and C), or disclosure to the issuer of all beneficial ownerships (see alternative B), particularly in the light of existing and future legal requirements for their public disclosure?

*Response:* Favorably—275 (65.2%); unfavorably—127 (30.1%); uncertain—12 (2.8%); no answer—8 (1.9%).

Question 6: Specifically, would your company be willing to bear the cost of establishing and maintaining the additional registration records or lists which would be required under alternatives A, B, and C?

*Response:* Yes—236 (55.9%); No—168 (39.8%); uncertain—10 (2.4%); No answer—8 (1.9%).

Question 7: As you know, the continued use of stock and other certificates has been under study by various interested groups for some time. Advantages of their elimination would include improved clearance and transfer and reduced company
costs, and its disadvantages would include loss of the evidentiary benefits of certificates for various purposes. How would your company view any system which would probably involve the elimination of the use of stock and other certificates, as would probably be the case under alternatives A, C, and F?

Response: Favorably—280 (66.4%); Unfavorably—128 (30.3%); Uncertain—8 (1.9%); No answer—6 (1.4%).

Question 8: Would your company be willing under any circumstances to bear a proportionate share of the following costs of the systems involved in each of the following alternatives (bearing in mind that under one or more of the systems there may be a saving in costs over a period of time)?

a. Cost incurred by banks and brokers under alternative B

Response: Yes—238 (56.4%); No—172 (40.8%); Uncertain—3 (0.7%); No answer—9 (2.1%).

b. Cost of the central mailing system under alternative D

Response: Yes—137 (32.5%); No—264 (62.6%); Uncertain—3 (0.7%); No answer—18 (4.3%).

c. Costs incurred by depositories under alternative E

Response: Yes—138 (32.7%); No—264 (62.6%); Uncertain—3 (0.7%); No answer—17 (4%).

d. Costs of maintaining the transfer agent depository concept, including a message-switching center, under alternative F

Response: Yes—201 (47.6%); No—202 (47.9%); Uncertain—5 (1.2%); No answer—14 (3.3%).

Question 9: Should the definition of "beneficial ownership" for the purposes of any of the proposed alternatives or any other alternative which may be proposed for improved issuer-shareholder communications be clearly restricted to the right to vote the respective securities (as distinguished from, for example, the right to exercise investment discretion or to receive economic benefits)?

Response: Yes—290 (68.7%); No—105 (24.9%); Uncertain—5 (1.2%); No answer—22 (5.2%).

Question 10: Should any proposed alternative expressly assure protection to companies against liabilities which might arise from the acts or omissions of central mailing depositories, centralized ordering depositories, transfer agent depositories, or the like, including for example, any challenge to the validity of a stockholder’s meeting or of any stockholder vote?

Response: Yes—410 (97.2%); No—6 (1.4%); Uncertain—1 (0.2%); No answer—5 (1.2%).

Question 11: Should any proposed alternative include adequate assurance that no disclosure of beneficial ownership will be required thereunder which might involve any violation of a beneficial owner’s right of privacy or which might otherwise involve violation of any legal requirement that the information be kept confidential?

Response: Yes—344 (81.5%); No—62 (14.7%); Uncertain 3 (0.7%); No answer—13 (3.1%).

Question 12: May we cite your company as a respondent to this questionnaire when its results are published?

Response: Yes—315 (74.6%); No—105 (24.9%); No answer—2 (0.5%).
